DECISIONS IN COMMERCIAL LAW.

Dale v. Weston Lodge I.O.O.F.—Appeal by defendants from judgment in favor of plaintiffs in action by administratrix of estate of George Dale, deceased, to recover $274 for sick benefits and funeral benefits alleged to be due on account of deceased's membership of defendants, and also $250 benefit to widow and orphans. Counsel contended that a member of a fraternal organization such as defendants' must exhaust the tribunals of the Order before resorting to courts of law; that the trial judge erred in finding deceased was a member in "good standing" within the rules of the Order at the time of application for sick benefits, because he was nine months in arrears for dues Held by the Court of Appeal that the plaintiff could not recover for sick benefit because it was adjudicated upon in the husband's lifetime, and the adjudication assented to by him; but the husband was in good standing at the time of his death, and the funeral benefit and widow and orphans' benefit should stand. Judgment varied by striking out the recovery for sick benefit, and reduced accordingly.

Burns v. Cheyne.—Appeal by plaintiffs from judgment dismissing the action without costs. The action was brought to have it declared that a certain chattel mortgage made by defendant Cheyne to defendant Wilson was made with intent to defeat and delay the plaintiff and the other creditors of defendant Cheyne, and to give a preference to defendants' the W. E. Sanford Manufacturing Company. The defendant Cheyne executed a chattel mortgage on all the stock-in-trade in her store in Toronto, to secure $4,775, which money the defendant Wilson advanced on the mortgage, and it was then handed to defendant company who gave a bond indemnifying Wilson against loss in respect of the advance. The Court of Appeal for Ontario affirmed the judgment of the court below.

Beaty v. Gregory.—Appeal by plaintiff from judgment dismissing the action in so far as the plaintiff claimed payment from defendants personally of the amount of a mortgage. The lands comprised in the mortgage were sold by plaintiff and conveyed to the defendants as trustees of the Parkdale Baptist Church as a site for a church, and the mortgage was made for the purpose of securing the purchase money. In the mortgage deed the defendants were stated to be "trustees under R.S.O., 1887, ch. 37," of the designated church, and it was executed by the defendants individually with their own seals, there being no corporate seal. The learned trial judge held that defendants were not personally liable, the plaintiff having dealt with them, and they having assumed to act as a quasi-corporation. Held by the Court of Appeal that the action as against the individuals fails, and that the covenant is a corporate covenant.

An account was given a few days ago by the Smith's Falls *Record* of twenty-two French-Canadian families, who had sold their possessions in Michigan and passed through that town on the railway on their way as immigrants to the Lake St. John district in the Province of Quebec. They numbered 180 persons, and had with them about $120,000 worth of settlers' effects, which filled five cars. Many had dogs in a special baggage car, to be used in hunting, also bear traps and other devices for trapping animals. This is the sort of repatriation one likes to chronicle.

Mercantile Summary.

RAT PORTAGE rejoices that the Dominion Government has at last placed in the estimates the sum of $5,000 for the erection of a post office and customs building in that town.

JOSEPH FORTIER, the Montreal manufacturing stationer, recently reported as failed, is making a proposition to pay ten per cent. cash. The liabilities are totalled at $99,000, but a considerable proportion is due on mortgage.

SMART thieves have sometimes to pay for their smartness. Mr. Bartley, State Treasurer of Nebraska, has been convicted of embezzlement, and on Saturday last was sentenced to twenty years in the penitentiary and to pay a fine of $300,000.

AN offer is made by F. B. Latour, general dealer, St. Polycarpe, Que., lately insolvent, of 30 cents, on liabilities of $2,100.——Andrew Kennedy, a contractor and builder, of St. Ferdinand d'Halifax, Que,, has failed, owing $2,500, with assets practically *nil*.

WE observe the nomination of Mr. John G. Foster, of Vermont, to be Consul General of the United States at Halifax. This gentleman is a lawyer, and a former member of the Legislature of Vermont. He had previously been named consul at Sherbrooke, Que., but has received a better post.

ANOTHER large freight steamer, built on the Tyne, has reached Montreal, and will ply between the St. Lawrence and English ports in the Elder-Dempster line. She is named the "Milwaukee," and is 470 feet in length, with registered tonnage of 4,775 tons. She will at present load general cargo for London.

ADVERTISING isn't cuteness –A mighty good lesson in advertising can be learned by watching the efforts of others—Economy in advertising is not governed by the size of space you buy, but by how you use it—Success to a merchant is measured by the amount of money made rather than by the quantity of goods sold.

A MILLINER at Granby, Que , Mrs. J. A. N. Brodeur, is endeavoring to effect a compromise at 20 cents on liabilities of $1,356.——Lulu McGauvran & Co., also milliners of Granby and Waterloo, lately failed, are to be wound up, Louis Jodoin, of Waterloo, having been appointed assignee. The liabilities are stated at $7,000 to $8,0 0.

WE hear that B. Patry, a shoemaker of Hull, Que., has assigned; his liabilities are put at $3,214, with assets of $2,400 He has also been interested in an undertaking business carried on under the style of Gratton & Patry. ——J. P. Landry, a dry goods dealer, of the same town, is in such shape that the preparation of a statement of his affairs has been deemed advisable. He is supposed to owe about $3,000.

THE New Brunswick Tourist Association, under the auspices of the St. John Board of Trade, is doing good work in making known the attractions of that city and province. They have issued many thousands of circulars and illustrated folders calling attention to the charms of St. John and neighborhood as a summer resort and the allurements of landscape, climate, fishing, boating, hunting, offered by New Brunswick. "The St. John River," says Talmage, "is the Rhine and the Hudson commingled."

THE port of Pictou, Nova Scotia, is ill-furnished with wharf room, surely. There were last week about two hundred men working at Pictou Landing, loading and discharging the vessels lying there. "Had Pictou proper wharf accommodation," the *Advocate* says, "what a help this could be to the trade of the town? If the ferry service had even been continued Pictou might have shared to a larger degree in the benefits arising from such an industry."

GRAND TRUNK high officials were in Brantford last Friday. It is understood that their business was the arranging the deal by which the company's car shops will be removed from Brantford to London. To make up for the loss of this industry to the Brantford people an entirely new industry, a malleable iron works, is to be established by the company in that town. This is expected to quite make up for the loss sustained by the removal of the car shops to London.

SIBERIA is not an arctic waste, peopled by a few Russian convicts, says an American journal, but an immense country with vast resources impatiently awaiting development. An English military attache, who has travelled through that vast country, delares that Siberia can produce about every kind of cereal and all sorts of live stock, and it possesses in abundant quantities the more important minerals, precious and other. Owing to the enormous distances and the cost of transport, the Russians have hitherto had no opportunity to place their Siberian produce on the great European markets. The construction of a railway through Manchuria will open up a country exceedingly rich in gold, and highly valuable from an agricultural point of view.

"BUSY, bustling Parrsboro," is what a correspondent calls the Nova Scotia town on Minas Basin, which is famed as being close upon the site of Longfellow's village of Grandpre, that "lay in the fruitful valley," scene of the loves of Gabriel and Evangeline. Two barques are building, side by side this leafy month of June, and the frame of a coasting schooner rises near by; an unusual activity in wooden shipbuilding for this district. And a water supplying system is being put into the town, which is as busy as it has ever been during all its history. Export of coal and of deals goes on in a lively manner from the port. A week or two ago, no fewer than eleven steamers, ships and barques were loading deals for transatlantic ports, or United States and Canadian towns.

UNDER the heading of "Victory for Gordon & Keith," the Halifax *Herald* of the 22nd inst. has a special despatch from Ottawa, saying that in the Exchequer Court on the previous day, "Judge Burbridge gave judgment in the case of Gordon & Keith and the Queen, deducting $75 from the referee's judgment. When the case was called for trial last July it was on motion of the Crown referred to Mr. Wallace to take evidence and report. A large mass of testimony was taken, experts being brought from Toronto and Ottawa, and the referee going to St. John. The balance due Gordon & Keith, as finally determined, is $6,248." THE MONETARY TIMES, in publishing some of the evidence taken in St. John in the course of this suit, commented on it as showing that the country was paying too much for the funeral trappings and services rendered by Gordon & Keith at the obsequies of Sir John Thompson in Halifax. But the firm sued the country for the balance of their claim, only a part of which had been paid, and they appear to have the desired balance now awarded them by law. They must have shown cause, therefore, why this claim should be rightfully paid, and the firm is to be congratulated. The evidence of several St. John experts, on which our remarks were based, must have been found to press unfairly against the firm.

Mercantile Summarv.

A PARTY of 181 immigrants, passengers by the "State of California," reached Montreal on Monday last, bound mostly for the prairies of Western Canada.

THIS, in the opinion of the Montreal *Gazette*, is an age wherein science lends its aid to everybody: "Burglars at Cleveland made use of a current from the trolley wire to fuse the lock of a safe in a bank they were trying to rob."

THE shareholders of the Dominion Granite Co., Ltd., of Bridgewater, N.S., met at the latter town the other day and elected the following board of directors: F. B. Wade, president: C. O. Foss, vice-president; R. M. J. McGill, sec.-treastrer; H. Sorrette, superintendent of works.

A DESPATCH of Tuesday from Revelstoke notes the departure of a train of eight cars, loaded with copper bullion and matte from the Hall mines, for Montreal, for shipment to England. This is the first copper made in far western Canada, and goes high in silver and gold. Its value, the despatch says, is about $500 per ton.

THE bronze statute of Queen Victoria, nine feet high, offered to the city of Quebec by the well-known sculptor, Percy Wood, in 1887, and valued at $10,000, has, after lengthy negotiations by Mayor Parent, been purchased for that city for $1,750 and set up in Victoria Park.

THE meeting of the American Society of Civil Engineers is being held in Quebec this week. A party of some two hundred persons arrived in Montreal on Monday last, bound for this gathering. The entire party paid a visit to the Lachine Hydraulic Company's works at the rapids, afterwards going to Quebec by pecial train.

JAMES F. NORTON, George Gordon, Byron Norton, Wm. D. McKay, A. B. Warburton, Ellen V. Norton and Susannah Ott, of Charlottetown, P.E.I., seek for incorporation as the R. B. Norton Co., Ltd., to carry on a general hardware business. The capital stock of the new company has been fixed at $10,000. The chief place of business to be at Charlottetown, P.E.I.

THE shipments of ores from Rossland mines to the smelter last week amounted to 1,625 tons, the largest output for any week in the history of the camp, according to a Rossland special to the *Gazette*. The Centre Star appeared in the list for the first time. The Leroi management estimates that its output will be increased to the average of 500 tons per day inside of two months. The ore receipts at Kaslo for the week were 427 tons, against 518 for the preceding week.

–THE iron and steel bounties were discussed in the House of Commons the other day. Mr. Fielding gave the following figures as to the probable amount of bounties to be paid during the year. It was estimated that 70,000 tons of pig iron would be manufactured in Canada. At $2.50 a ton the amount of bounty would be $175,000. On puddled bars of iron $13,500 would be paid, and on steel ingots $45,000. The aggregate bounty would amount to $233,000 during the year.

HALIFAX has had a gala week. There were the Jubilee festivities, and the Cabot celebration, and the meeting of the Royal Society of Canada, all going on about the same time. Principal Grant, of Queen's College, made an admirable oration on Joseph Howe, concluding with an appeal to the Province for a statue of that great man And a resolution was enthusiastically passed by the audience which he addressed, in favor of an instant effort to carry out the idea of a statue in the city.

THE merchants of the Chinese quarter of Victoria, B.C., met on June 16th to talk over and arrange for the coming Diamond Jubilee celebration. For, said one of them, they also intend to celebrate the Queen's Diamond Jubilee. Arrangements were made to have the Chinese quarter decorated with lanterns, flags and drapings of all kinds. If the necessary permission can be obtained they will explode the festive firecracker. The *Times* adds that the Chinese orchestra are practising for the occasion.

MR. QUINN, of Montreal, has been advocating the claims of charcoal iron to a bonus before the Dominion House of Parliament. Charcoal iron, he said, was not manufactured elsewhere in the Empire. British manufacturers depended on German or Swedish sources for their supply of charcoal iron, and there was a good chance that a respectable trade for Canadian charcoal iron in British and foreign markets could be worked up. But to this end the industry should enjoy similar advantages with other iron industries.

MR LEWIS GRANT was for many years a well known man in dry goods and millinery circles of Montreal, and his death on Sunday last will be learned with sorrow by a large circle. He was for twenty-three years in the employ of Messrs. Thomas May & Co., for a long time as commercial traveller, and later in various other posts of trust in the establishment He joined the service of that wholesale millinery firm in 1873, resigning his position because of failing of health about a year ago.

IT is of interest to learn that among the passengers on the steamer "Gaelic" last week was a party of Japanese, visiting America in the interest of the Japanese Government and the Central Tea Association of Japan, to establish bureaus for the regulation of the tea business in Canada and the United States. A bureau is in existence in New York, and other bureaus are to be established at Chicago, Toronto and Montreal. The tea bureaus will serve about the same purpose in respect to tea as the viticultural bureaus in the eastern cities do in the regulation of the foreign wine trade.

IN reply to the query why a bicycle costs $100? *The Wheel* says: "The cycle is a sort of cross between a watch and a steam locomotive. It embodies the delicacy and accuracy of the one with the strength of the other. It is a machine of hundreds of parts, so accurately adjusted that it can be run for months without repair; so light that it can easily be lifted with one hand, yet so strong that it will carry a heavy man thousands of rough miles without disaster. Is it to be wondered at then that the manufacture of such an article requires immense skill, and involves many interesting and intricate processes?"

JUST as we were going to press last week the suspension was announced of the Montrea wholesale dry goods firm of Lonsdale, Reid & Co. The house was an outgrowth of the old and at one time well-known house of T. J. Claxton & Co., and began business some thirteen or fourteen years ago. They did well for a time, but a serious aggregate of bad debts in the last two or three years has impaired their capital to such an extent that they will have to get some settlement to enable them to continue. They have made a proposition to pay 60 cents, in three, six, nine and twelve months, which, locally, seems to meet with favor. The liabilities, direct and indirect, are estimated at about $150,000.

Mercantile Summary.

At Winnipeg on Monday 850 Galicians and 160 German immigrants came in by train bound for Grenfell, Assa., and Yorkton respectively.

A number of the leading merchant tailors of King street, Toronto, have agreed to close their respective places of business during July and August at five o'clock, except Saturdays, when they will close at one o'clock.

Owing to the failure of Boehmer & Co., who owe the Berlin Shirt and Collar Co. about $9,000, the latter concern finds itself unable to meet obligations in full, and are offering a compromise at 35 cents on the dollar. Their liabilities amount to about $30,000.

Mr. H. McLaren, of the Montreal commission firm, H. McLaren & Co., 706 Craig street, in that city, is on a visit to Toronto, to meet the directors of the Toronto Radiator Mfg. Co. and other concerns whose goods he handles in the adjoining province. We understand that it is Mr. McLaren's intention to visit Hamilton also, for he is the selling agent in Montreal, and a very successful agent too, of the Hamilton Iron Blast Furnace.

Some time ago this journal reported the embarrassed condition of James Morrison, brass manufacturer, this city. Since that time Mr. Morrison has succeeded in effecting a compromise at 20 cents on the dollar.——Last week mention was made of the financial troubles in the Scott & McMillan Company, Limited, perfumery manufacturers, this city. They have since made an assignment, with liabilities amounting to $8,500, and assets to $12,000.

A firm of liquor dealers at St. Thomas named Pinfold & Reeks, dissolved partnership in 1895, and in the following month Pinfold, who continued the business, assigned to Reeks. The liabilities then amounted to $9,000, on which P. promised to pay 35 per cent., spread over six months time. Since then he has been very slow pay; not long ago one of his creditors issued a writ, and now he has made another assignment to Mr. Reeks.

From Thursday, 19th August, to Saturday, the 28th of the same month, nine days in all, is the period during which the sixth annual exhibition of the Montreal Exposition Company will be held in that city. The date of this great fair's opening has been changed to an earlier day with a view to affording greater convenience to exhibitors, and in the hope of securing more favorable weather. The directors will be pleased to receive any special prize or contributions towards increasing the premium list, as well as any suggestions that may tend to increase the importance and usefulness of the exhibition.

Mr. J. H. Still, president of the St. Thomas Street Railway Company, has made a proposition to the council of that city with a view to the introduction of electricity on the lines. The *Journal* says: "The company asks that their bonds to the extent of $50,000 be guaranteed by the city, $5,000 bonus (payment extending over four years), exemption from all taxation for thirty years, and to be relieved of all expenditure for keeping the right of way, other than the macadam roads, in repair. The proposition is one which should be fully and carefully considered before any decision is arrived at, and while, at first reading, it appears to us that the company are asking too much, we defer comment for the present, until the amount it is propesed to expend on the construction and equipment of the road is known, and until fuller information in regard to other matters is received."

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

● ● ●

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

FROM Nanaimo comes the report that Speck & Freure, bicycle dealers are financially embarrassed. This firm only started business in the beginning of the year.

WELLINGTON KIMBALL, who ran a general store at Wilkesport, has assigned. It was in September, 1894, that he succeeded his father to the business, and gave a chattel mortgage on the stock. He has never been able to get rid of the mortgage, and has assigned.

IN Hamilton, a boot and shoe dealer named Robert G. Wilson, has assigned. Mr. W. has been afflicted by sickness in his family, and no doubt this fact helped to explain his present financial difficulty. His debts amount to about $16,000, and his stock is worth about the same.

WHILE the Ottawa lumber trade is not buoyant, or the feeling with respect to the immediate future of the American trade hopeful, there is a good feeling in Quebec timber and deals circles, and among St. John exporters also. We note elsewhere that there is decided activity in timber at both London and Liverpool.

IN March, 1894, the dry goods firm of J. D. Williamson & Co., of Guelph, found themselves in financial difficulties. At a meeting of creditors held then a statement was submitted showing the firm to have liabilities amounting to $55,000, while assets were $50,000. A compromise was made with the creditors of the firm on a basis of 60 cents on the dollar, spread over a period of twelve months. About a week ago they disposed, as noted in our last issue, of their stock, which amounted to $30,000 or thereabouts, to D. E Macdonald & Bro., who paid 75 cents on the dollar thereon. On Tuesday a meeting of creditors was held, and a statement submitted showed liabilities of $38,000 and assets of $33,000. Having made no offer to compromise, J. D. Langley has been appointed trustee.

FOLLOWING are a number of items of interest to the commercial community generally:—Thompson & Co., general store dealers, Mt. Pleasant, have removed their business to Harrow, Ont. ——At Oil Springs, the drug business of Cronkhite & Co. is succeeded to by A. W. Dewar.——*Dun's Bulletin* states that Miss F. Giard is sole owner of the nursery business at Longueuil, Que., conducted under the name of P. Giard & Co.—— Crawford & McCallum have commenced a commission business in Montreal.——At Slocan City, B.C., Futcher, Savett & Co. are starting to sell wall papers, etc., and at Trail, J. K. Klien has opened in shoes, harness, etc. —— T. V. Sears is a new grocer in Antigonish, N.S., while the general store business of S. & J. Blanchard, Wellington, P.E.I., has been closed.——Wm. Sadler, grocer at Seaforth, is removing his business to London, while J. F. Aitkin has bought R. Haskett's grocery business at Watford.——A new hardware business has been started at Arden, Man., and will be conducted by one Chambers, and F. S. Moule has also commenced a general store at Revelstoke, B.C.——J. R. Beauchamp has sold his Montreal grocery to W. Mireault, and has purchased E. Masse's East End branch in the same line.——Alex. Desmarteau is trading in the name of Charles Desmarteau.—*Dun's Bulletin* —— S. Brenner is sole owner of The Montreal Tailoring Company.——The partnership of Jean & Chartrain, brokers, Quebec, has been dissolved and Phillippe A. Chartrain continues——A. McAllister, coal dealer at Belfast, Ont., has given up business.——Incorporation has been granted to the Pembroke Navigation Company, Ltd., and to the Toronto Biscuit and Confectionery Company, Ltd.——John J. Walker is starting in the grocery line at Dauphin, Man., and T. M. Law & Co. have commenced a general store business at Valley River.——Downey & Coll have bought the hardware stock of E. Mawbinney, at Holland, Man.——At Portage la Prairie the men's furnishings stock of McLeod & Bothwell is advertised for sale.——The Canada Drug and Book Company, Limited, at Regina, N.W.T., was formerly the Martin & Lamont Co., Ltd.——The tea stock of J. M. Teichmans, Winnipeg, is offered for sale.

A PRESENTATION.

The Toronto Club was the scene of an enjoyable banquet on Monday evening last. The occasion was one when members of the Clearing House Association of this city assembled to do honor to Mr. Wm. B. Grindlay, formerly manager here of Bank of British North America. All the leading bankers of the city were present, and Mr. D. R. Wilkie presided. Some very kindly and complimentary things were said by various gentlemen present, who agreed that perhaps more than any other man, Mr. Grindlay had the entire confidence of the whole banking fraternity. It was happily said of him, too, that so faithfully did he guard any confidential information in his possession that he was styled by his colleagues, "William the Silent." Mr. Grindlay was secretary-treasurer of the clearing house, but resigned that post when he left the B.B.N.A. Its members desiring to give him a testimonal in recognition of his services, chose a handsome solid silver tea service of eight pieces. Each piece bears the initials, W B.G., and the large silver tray bears the inscription: "Presented to Mr. William B. Grindlay by the members of the Toronto Clearing House in recognition of his faithful and valued services as Secretary-Treasurer, extending over a period of nearly six years. Toronto, 29th June, 1897." The service was enclosed in a case of antique oak, lined with purple satin. The presentation was made by Mr. Wilkie, with an appropriate speech. Mr. Grindlay was plainly touched by the warmth of the expressions of feeling by his former colleagues, and replied feelingly to the many kind sentiments expressed towards him.

Address, Nelson, B.C.

Mercantile Summary.

For the first Dominion Day in years the bar rooms in Hamilton closed at 11 o'clock p.m., in accordance with the new Ontario License Law. The old time of closing on week nights, except Saturday, was 11.30.

An important meeting of the National Fire Brigades' Union of England took place last week at Windsor, Eng., when representatives from all the cities and towns of the kingdom were present. The visit of the Montreal firemen to the International Fire Tournament last year lent an interest to the present meeting in the Royal City, and as a result Ald. Stevenson and Chief Benoit sent a cablegram of congratulation to the English brigade.

Many business men, after giving a contract for advertising, say, "wait a minute and I'll give you the copy." If those who do this have carefully prepared copy on hand that is suitable for the publication with which they have contracted, well and good. But it is a great mistake to hurriedly dash off an advertisement in order to close up a transaction; all advertising matter should be carefully prepared. It is far better to be too long over it and have it right than to spoil it by haste, and there is another thing to remember in this connection, run a good advertisement for a little while, and then change it for something as good or better.

The effect of the C.W.A. meet at Chatham this week will be beneficial to the merchants of that city, and the city in general. It is estimated that there were upwards of 10,000 visitors, and it is safe to venture the assertion that not more than half the number ever saw Chatham before. This being the case it is easy to see that some good must result from the advertisement thus received. Of course most business houses were closed, but Chatham is an attractive place, and there are some who will receive a lasting favorable impression that will reflect to the city's credit in years to come.

Too much stress, says an exchange, cannot be laid on the important subject of partnership life insurance. The advantages derived from the taking out of a policy by each partner in a concern in favor of the other member or members of the firm, were made very plain quite recently in connection with a dry goods house in the South. One of the three partners—who by his family connections controlled the principal portion of the capital of the concern—died suddenly, but instead of the surviving partners finding themselves crippled by the withdrawal of his capital and the backing he could claim, their own resources were reinforced by a considerable sum in ready cash. Partnership insurance ought to prove a strong card in a credit statement.

– Until recently the Allan Line Steamship Company has been conducted as a private firm. In London, England, on the 18th ult., the company was registered under the name of the Allan Line Steamship Company, Limited, with a present capital of £650,000. The officers of the new corporation are: Mr. Andrew Allan, chairman; Mr. Nathan Dunlop, vice-chairman, and Mr. Bryce Allan, of Glasgow, secretary. A short time ago the Allans purchased three new steamships. These are the "Ludgate Hill," the "Tower Hill," and the "Richmond Hill," all three of which are the same in size, and are intended for the reight carrying trade.

ACTIVITY IN TIMBER.

Reports from London and Liverpool indicate an active demand in England for pine and spruce. The *Timber Trades' Journal*, of London, June 19th, says: "The Canadian shipments arriving this week are the forerunners of an unusually heavy first open-water shipment from the St Lawrence both in pine and spruce, and judging from the amount of wood sold on contract, as well as the considerable amount which there now seems no doubt will arrive on consignment, the supply of Canadian goods will be fully equal to the demand this year. Fortunately the consumption is good, with every appearance of continuing, and on this, as well as the manner in which consignments are sent forward, the fate of prices later in the season depends. The position of Canadian hardwoods at the present time is stronger, as we learn that at Quebec there are practically no stocks of oak or elm in the hands of manufacturers, and the same applies also to Western waney board pine at that port.

HARDWOOD FLOOR CLEANSER.

A German paper suggests that for cleaning hardwood floors, or removing oil colors and varnishes generally from floors or furniture, an application of hot solution of caustic soda is the best thing known. Plain soda is frequently used, says the *American Carpet and Upholstery Journal*, but the operation is slow and not altogether satisfactory. A strong soda lye is likely to darken the color of oak, but this matter can be easily remedied by brushing the wood over with diluted muriatic acid and washing thoroughly as soon as the proper color is attained. A cotton or hemp swab is suggested for the application of the soda, and cotton or linen clothing should be invariably worn on account of the effect which soda lye immediately has on woolen.

—Amongst the contracts recently taken by Messrs. Paquet & Fortin, of Levis, according to the Quebec *Chronicle*, are a railway branch for the Laurentide Pulp Company a mile and a half in length and west of the St. Maurice River, which is to be completed in a few weeks; a branch of the Great Northern Railway, ten miles in length, to the north of Three Rivers, and a bridge over the Shawenegan River, at five miles and a half from the Grande Mere bridge. It is to be 370 feet in length and 85 feet high. The superstructure is to be of steel and is being made by the Dominion Bridge Company. They are also building three miles of railway and track to reach the place called Coulee Lavergue, and three miles further up than the Shawenegan River; also a steel bridge 500 feet long and 92 feet high. It is to be erected over a branch of the Shawenegan. Some 600 men are employed on these works.

—The largest mixed sale of oranges and lemons ever held in New York, says the *Journal and Bulletin of Commerce*, took place Monday in the auction rooms of Brown & Seccomb. The offerings comprised one full cargo of fruit, that of the steamer "Thomas Melville," and portions of the cargoes of the steamers "Tampico" and "Scindia," and amounted, in the aggregate, to 27,500 packages of oranges and 20,000 packages of lemons, or a total of 47,500 packages. There was some fear that the unusual quantity offered would have a tendency to depress prices, but while this was true in a measure the results seemed to be generally satisfactory. The highest price realized for oranges was $4.20 per box—for the Ciampa brand—and for lemons $3.65 per box.

—"I find the American farmer so interesting," tittered the poetess. "I manage to extract a good deal of interest out of him myself," was the answer of the short, double chinned, elderly gentleman, who, as it afterward developed, was in the mortgage business.—*Cincinnati Enquirer*.

—A Washington despatch says that Senator Pettigrew was stricken with paralysis of the vocal cords while speaking on the tariff, and that his colleagues were struck with awe thereat. To our neighbors the idea of a legislator who cannot talk seems to be startling.—*Montreal Gazette*.

DEBENTURES

Municipal Debentures **bought and sold,** also Government and Railway Bonds. Securities suitable for Investment by Trustees and Insurance Companies and for Deposit with the Government, always on hand.

THE SITUATION.

When the bill to confirm the bargain made between the Government and the Drummond County Railway Company was thrown out by the Senate, the Ministry promptly decided upon its policy. An item to cover one year's lease of the property was put into the Supply bill. It was now the turn of the opponents of the deal in the Senate to take a second step, and the new move took the form of a resolution to enquire into the expenditure of the subsidies granted by the Parliament of Canada to the railway company, and everything generally connected with its affairs. Senator Mills hinted a constitutional objection; Senator Scott mildly objected to go on a fishing expedition; Senator Mowat declined to oppose the motion, which was permitted to be carried without a vote in opposition. This was no doubt the wisest course. The charges which led to the motion for enquiry appeared in a Montreal newspaper, and the movers of the motion must be regarded as having practically adopted them, or at least becoming responsible for the enquiry. In the end, Sir Oliver Mowat, in the Senate, and Mr. Blair, in the House, having promised full investigation next session, Sir Mackenzie Bowell agreed to the postponement of the enquiry. The promise of the Government not to do anything in connection with the Drummond County Railway during the recess, that will not leave complete freedom of action as to the mode of bringing the Intercolonial to Montreal, is positive. In the meantime, a nine months' experiment will be made with the Drummond County Road.

The merits of the original deal with the Drummond County Railway Company rest upon contingencies in the shape of estimated results. It is alleged on behalf of the bargain, that not only would the rent be recouped by the operation of the road, but that a gain of $300,000 a year in addition would be made. The nature of the bargain, considered in its financial aspect, depends entirely upon the reliability of the estimate. Apart from any alleged wrongdoing in connection with the deal, this is the point to be considered. If there were any means of demonstrating that the alleged profit would be realized, the operation is one that any business man would be willing to embark in. Any member of either House is at liberty to doubt on this point, and that honest doubt is not possible cannot fairly be alleged, even if the probability seems to look the other way It is hinted that some other railway company or companies have fanned the opposition.

Senator Mills' point was that the investigation into the Drummond County Railway deal ought to be made by the House of Commons. This is a question of majorities, which lean to one political party or the other. A committee to which either House would agree would bear a party complexion; but in the Commons it would be of one color, in the Senate of another. In the British Parliament, the rule is to draw committees as nearly as possible in equal numbers from the two great parties, consistent with the Government having a majority of one. This practice has been said to account for the fact that the evidence taken before Parliamentary committees, in England, is generally of more value than the report founded on it. Here the Government is to be tried by a committee which is on the whole adverse. Mr. Mills, whose appointment to this chamber, along with that of Sir Oliver Mowat, gave consideration to the Senate, will, as a member of the committee, count for much in some respects. Fair treatment of the questions to come before the committee will be expected, and the expectation ought to be realized.

As was foreseen at the time when the Premier took his departure for England, several of the Government bills were dropped. The principal measure passed was the Tariff bill; after it in importance came the railway subsidies, notably that for the Crow's Nest Pass. The expenditure of the session is uncommonly, some might say amazingly large, all things considered. The result will probably be a popular demand that a rein be put on the expenditure in future. Demands of this kind are always made, often compliance with them is promised, but they are seldom satisfied in practice. What the future has in store for us, in this particular, the future alone can tell.

It is now plain that Canada attempted to carry the burthen of too many protected industries at once. And she had not the excuse for doing so that the United States alleged: the necessity of buttressing the national independence by being able to produce whatever was necessary to the nation's existence. This was putting a political motive above the economical. The experience of two wars gave at least some countenance to this resolution. It was this that led to the extravagant duty of $28 a ton being put on iron. Canada, without any such political necessity, is trying to make iron under conditions which are the reverse of promising, regard being had to the natural advantages which other countries, none of them greater than those of the United States, have for succeeding in this industry. These advantages have come to the latter country in recent discoveries of rich iron ore easily obtained, in near connection with coal. If the experiment had not been entered on, it would be folly for Canada to try to balance these natural advantages by bounties and customs duties; and the question is whether the effort we are now making in this direction gives reasonable promise of success.

At last the tariff discussion in Parliament is brought to an end by the passage of the tariff bill. The opposers of reduction of duties acted in accordance with what they believed to be their interests, but in a way different from the promises which were made years ago, that protection would only be required for a few years and might then be abandoned. We ought not, perhaps, to be surprised that the threatened interests were never more aggressive than this session; some of them went so far as to claim a monopoly of the Canadian market, which meant the destruction of the import trade, and that the country, in order to do a business one way, should pay freight both ways. They were encouraged to repeat, unwittingly no doubt, the claim of Lord Liverpool, that a vested interest had been created. Considerable latitude of opinion on the merits of a high tariff, facts cropped up to show, was found among the members of the Government, but the Premier, since he landed in England, came out as a pronounced free trader, in theory, and willing to do what he could to give practical effect to his views. As a matter of fact, no long stride towards free trade has been taken in the new tariff; but perhaps all has been done that was possible under the circumstances.

Preference in favor of British goods has gone into effect as a result of the new tariff legislation. The ease with which goods can be transhipped always makes it difficult to trace their origin, especially when traders have an object in concealing the fact. This has been exemplified in the case of the sugar bounties. In fact the whole history of furtive transhipments, made to cover an unavowed design, shows something akin to an utter impossibility of identifying the origin of goods so dealt with. We cannot hope that, in our attempts to enforce a legal preference, made for cause, we shall be more fortunate than the average experience of mankind when men have been engaged in a similar effort.

Some exceptional powers have been given to the Government in the hope that there will be no occasion for their use. This is true of the export duties which may be imposed. Such duties would not only reduce sales, but would lower prices and bring retaliation in their train. But Parliament is not to be condemned for insisting on the armed truce.

In the direction of freedom from restraint, a distinct step has been taken by putting Indian corn on the free list. The farmers did not quite know whether to welcome this change or not; but free corn ought to bring gain in the cheapening of beef and pork, even if the caution be necessary that our bacon trade with England may be prejudiced by the exclusive use of corn for hog feed instead of peas, as at present.

An addition of $15,000,000 to the funded debt of Canada, which has been authorized, will require more revenue, for which it must be assumed provision has been made. With increasing debt, there is some danger that a revenue tariff may, at some points, progress in the wrong direction. So far as the increase of debt consists of appropriations for canal improvements and railway aids, its creation is intended for employment in works of a productive nature. The revenue, if any, which this capital invested in canals will produce, will go into the coffers of the Government; that produced by railway subsidies will go into the treasuries of private corporations. The policy which gives public money to private enterprise without any hope of direct return, at any time, burthens the public revenue for the benefit of private persons, and is essentially vicious. There is a growing opinion, which comes as a warning, that the days of this policy are numbered.

On the railway question Postmaster-General Mulock holds advanced opinions. Speaking for the Government, he said: "We have sought to nationalize the railways of the country by securing at least running powers over other lines, and enabling the Government railway to control rates between the head of ocean navigation and the seaboard. I would further approve, if it were possible, of extending that policy, so that from one end of this great continent [to the other ?] there shall be at least one great Dominion road operating as a regulating power to prevent railways in private hands being unjust toward the people of this country."

ENGLAND AND SILVER.

The National Review, which is edited by a relative of Lord Salisbury, makes a somewhat startling announcement of what the British Government is prepared to do with silver. France and the United States are said to have urged that some practical steps be taken in regard to the silver question, and the National Review declares that it is in a position to say what England's reply will be: "That the Government is willing to reopen the Indian mint, to make a farther substantial contribution towards the rehabilitation of silver by extending its use in England through increasing the legal tender of silver, making silver the basis of notes, empowering the Bank of England to use its silver reserve." Besides this, England is to give strong moral support to the object which the United States and France have in view, in connection with silver. That object, as we all know, is to restore silver to the place it previously occupied in the currency of nations.

The question of the ratio between gold and silver would not be easily settled. But there can be no question that the decline in the price of silver is largely due to its demonetization, which was led by Germany. France herself took much of the California gold to the debasement in the price of silver. But though the changing of the relation of the supply of silver to the demand had much to do with the decline of the price of silver, it was not the sole cause; a reduction in cost of mining silver, with the facility of obtaining large supplies from the mines, also had an influence in accelerating the fall. If silver were remonetized, only the latter course would have any effect on the price. The restoration of demand, temporarily disused, for silver, if their relative quantities were the same as before the disuse, would restore the market ratio between the value of the two metals. But as the relative quantities are not the same, silver having increased more rapidly than gold, the old ratio would not be restored. Sixteen to one would not therefore be a practicable ratio for governments to adopt; but, though no exact ratio can be made stable, it might be possible to get near enough for practical purposes.

As a matter of fact, the world has long made use of both gold and silver as coin. Of late they have violently parted company, for the reasons stated; but if the cause of separation were removed, the rehabilitation of silver might be found to be not impossible. England, by carrying out the intention now attributed to her, could do more than any other country to bring about the change; but as Germany's action led the decline of silver her concurrence would probably be necessary to secure its complete restoration.

From what the British Government is said to be prepared to do, some of the motives which have led her to change her policy may be found in the history of the question. In India, the closing of the mints to the coinage of silver was admittedly an experiment. The Bank of England, at least the governor and some of the directors, have long desired the Government to permit it to do with silver what it is now said will be conceded. The announcement of the National Review contains nothing intrinsically improbable, and the known relation of that organ to the Government makes it tolerably certain that the information it gives is correct.

PUSH IMMIGRATION.

Now is the time to push immigration.

Now is the time to let people abroad know more about Canada.

All over the British Islands in these Jubilee rejoicing days the folk are talking about the colonies; but somehow when they talk or write about "the colonies" they think *first* of Australia and New Zealand, and possibly second of this Dominion. We must change this, and place Canada first. There is an excellent chance now, thanks to the "boom" started by Private Stewart and continued by Mr. Laurier. But we have to cure the old country folk of their wrong notions about Canada, and we must carry our efforts over to the continent.

Hundreds of thousands of copies should be sent across the Atlantic of the admirable pamphlet issued by the Western Canada Immigration Board. We have sometimes thought that Ontario and the Dominion might take a lesson from the Quebec authorities in making their immigration literature attractive, but this pamphlet, modestly headed "A Few Facts," appeals to the eye with colored illustrations, photographs and maps, and gives facts and figures about life, progress and happiness in Western Canada under the hands of settlers themselves—Danish, English, German, Irish, Russian, Scotch, American and Canadian.

A great merit of the publication is that it testifies the advantages offered by Western Canada in the la nguage o the settlers themselves, in their own hand-writing (*fac simile*), and virtually in their own characters. Thus the intending emigrant, say, from Europe, is addressed directly by those who have had experience of this country, and he is assured by them that he can make no mistake in casting in his lot with persons who have found the conditions so favorable to success.

Nor is this a farmer's pamphlet only, inviting people to farm lands only. There are pictures illustrative of towns, railway elevators, shipping, mining, smelting, fishing, lumbering. It would appear that the selection of the illustrations has been sensibly made with a view of demonstrating that each section of the country from Lake Superior to the Pacific has its own peculiar advantages. Altogether the reflecting reader of this interesting pamphlet must arrive at the conclusion that Western Canada is a country of varied resources and of great promise.

Something of this kind has, we feel sure, been often desired — we mean a mass of testimony from settlers themselves, which could be submitted as the genuine unprejudiced opinion of those who have no motive to mislead; but until now no one has collected this opinion and experience in a practical form, and presented it in so novel and attractive a shape. The Minister of the Interior, under whose authority the pamphlet appears, and the Western Canada Immigration Association,. are to be congratulated on this excellent specimen of immigration literature.

Foresters' Journal of Proceedings.—This bulky volume of 200 pages contains an account of the proceedings at the eighteenth annual meeting of the High Court of Canada, Canadian Order of Foresters, which was held this year at Niagara Falls, Mr. H. Gummer of Guelph, High Chief Ranger.

CANADIAN SPRUCE FOR PAPER MAKING.

Canadian pulp wood is likely to find market in France, according to the opinion of Mr. George Wagner, of Paris, who is now in Montreal. This gentleman represents several large paper manufacturers, and proposes to give contracts for the supply of one cargo of pulpwood as an experiment. France is a large importer of pulpwood for making paper, its supply coming mainly from Norway and Sweden. But the spruce of those countries, as of others which produce the spruce, is inferior to the Canadian, in the estimation of paper-makers who have made a study of the matter. Our spruce is preferred, at even a higher price, it is said, because it is freer from knots, longer in fibre, and mills better than that of other countries. United States paper-makers recognize this, and acknowledge the superiority of our spruce to theirs in this respect, while they lament the limited extent of their supplies of that wood compared to ours.

It is only in recent years that Canadians have begun to realize that the wood pulp industry is full of promise to this country. The forests of Canada contain a bountiful supply of wood suitable for the manufacture of pulp, and with the exhaustion of supplies in other countries the prospects for the Canadian trade improve. Capital is being invested in this industry in various parts of Ontario, Quebec, and the Maritime Provinces, and with the establishment of mills containing the most improved plant, the pulp industry of Canada will soon become of national importance. The exports from Canada of pulp and wood for the purpose of making pulp for paper manufacture in the year 1896 reached an aggregate value of $1,305,500. The exports during the past five years are shown by the following table:

	Wood pulp.	Wood for paper pulp.
1892........	..$355,303	$219,458
1893....	.. 455,893	386,092
1894....	.. 547,836	393,260
1895..	.. 590,874	468,359
1896	.. 675,777	627,865

The United States is Canada's best customer for both wood pulp itself and wood suitable for pulp manufacture, taking in 1896 no less than 88 per cent. of our total exports. England takes the balance of our exports, with the exception of a small shipment made to France. These figures fall far short of representing the real importance of the wood pulp industry to Canada. The Canadian commercial agent at Liverpool, in a report made in 1894, writes: "It is a generally expressed opinion now among paper-makers in the north here that Canadian pulp is distinctly superior to that of Norway, and still more so compared with Swedish pulp. Much of the superiority we believe to be attributed to the nature of the wood itself. The fibre seems to mill better and is certainly of a tougher, as well as finer texture." The commercial agent of Canada at Sydney, N.S.W., Australia, writes to the Government, January, 1897, as follows: "The representative of a leading stationery house in this city has just expressed to me his surprise that while Canadian paper and pulp-makers appear to be earnestly striving to get an entrance into the English markets, no attempt is made by them to secure the Australian." Australia is a large consumer of commodities made from wood pulp, and with superior transportation facilities Canadians should be able to control that market.

IRRIGATION.

Among the subjects of importance treated of in the report of the Canadian Department of the Interior for 1896, is that of irrigation; a section of 120 pages of the report being devoted to explaining and illustrating it. The means taken to supply artificially with water what is termed the arid region of our North-West, namely, parts of Southern Alberta and Assiniboia, and thus assist not only the cereal, but the root and fodder crops, have gone beyond the experimental stage. And the results therefrom are decidedly satisfactory. Most of those who have resorted to the system of irrigation are stock raisers, and have devoted their efforts mainly to growing hay and other fodder; but good grain crops, both as regards quality and quantity, were obtained last year from these irrigated lands. A remarkable instance of the kind is given among the photographic illustrations furnished in the report. Upon a farm at the mouth of Fish Creek, not far from Calgary, private ditches were built in 1895 to irrigate 800 acres, and so successful were they that from a part of this land, which had previously yielded nothing, 900 tons of hay was taken.

The system has made quiet but remarkable progress. At the beginning of 1895 there were 70 ditches constructed and in operation in Southern Alberta and Western Assiniboia. At its close this number had increased to 112, and the acreage under constructed ditches susceptible of irrigation therefrom to the surprising figure of 79,271 acres. In addition to the canals and ditches already built, 42 ditches and canals have been surveyed. The length of those built is over 350 miles.

Very satisfactory harvest results were obtained last year, and good returns were secured by irrigators from their crops, the British Columbia mining districts affording an excellent market for oats and hay, a market which must, of course, expand very largely. Irrigation surveys have been continued in Alberta by the Department, from the foot hills of the eastern slope of the Rocky Mountains to affluents of the Red Deer river, north of Calgary, and exploration is being made in Assiniboia to determine whether an effort shall be made to divert water from the South Saskatchewan river to the Regina plains.

It is necessary to explain the meaning of the term "arid region" and to see whence the necessity for an artificial supply of water comes. And at the outset Mr. J. S. Dennis, chief inspector of surveys, devotes a page to correcting what he properly terms a very erroneous opinion which prevails regarding the nature and product of the lands in our North-West treated by irrigation. The portion of territory in question is only arid in the sense that there is insufficient rainfall during the majority of seasons to mature crops. "The soil of this region is good; *none* of it is arid in the sense of its being barren wastes, but the whole region *produces a good crop of grass every year.*" How then is it termed arid and why is it necessary to irrigate it? Let Mr. Dennis reply :—

> "Probably the best means of dissipating the erroneous impression referred to, is to state that the so-called aridity constitutes one of the strongest features in the present value of the region, and renders it, even in its present condition and without irrigation, an exceedingly valuable portion of the public domain. This assertion will be better understood by reference to the marked success which has resulted from the stock industry in the arid portion of the Territories, and from the statement that this success is distinctly traceable to the fact of the small rainfall during certain portions of the year. The area in question produces every year a good crop of grass, the moisture from the melting snows and spring rains being sufficient to advance this growth to a healthy condition before the hot and dry summer months. The effect of the lack of rainfall during these months (which has led to the application of the term arid) is to rapidly cure the grass grown in the earlier part of the year in such a manner that its nutritive qualities are retained, and as a consequence, stock will thrive on this sun-dried grass, which to the observer looks hard and useless, in such a marked manner that beef fit for market purposes is provided during the late fall and winter months direct from the range. Were the moisture sufficient to keep the grass green and growing until late in the season, the effect, which has been experienced during some seasons, would be that instead of being cured and rendered fit for good winter feed, it is largely killed by the early fall frosts, and cattle fed thereon become poor and weak. It will, therefore, be realized that while certain portions of the arid region will, with the aid of irrigation, produce bountiful crops of all kinds of cereals, the total water supply available for reclamation of areas by irrigation, as is more fully explained further on, will only suffice to irrigate a small portion of the region, and that the value of the remaining portion for grazing purposes is mainly due to the very aridity which renders irrigation necessary, and further, that one of the greatest benefits to be looked for from irrigation is the reclamation of districts well suited in all other particulars for grazing purposes, by providing the water necessary for stock watering purposes."

COUNTERFEIT LIFE INSURANCE.

SECOND ARTICLE.

The following is a summary of the foregoing figures relating to the eleven grand lodges of the Ancient Order of United Workmen, whose record we have been presenting each year for thirteen years. From 1884 to 1893, the membership of those lodges made excellent growth. From 91,452 in December, 1884, they grew to have 139,581 members. But the past three years has brought a change, and they now number only 128,887, as the footings for 1896 show. The result upon their combined net death-rate is, that instead of $9.50 per $1,000, as in 1884, it cost the members $15.42 each in 1896, apart from the $4 assumed for expenses :—

ANCIENT ORDER UNITED WORKMEN.

	Membership December 31st.			Net cost per $1,000.		
	1884.	1893.	1896.	1884.	1893.	1896.
California	16,655	17,316	16,242	$ 8 48	$16 02	$19 26
Colorado	2,217	5,430	8,347	3 62	5 25	8 48
Illinois	15,392	19,508	17,426	5 51	14 76	15 42
Kentucky	1,484	2,500	1,965	15 73	14 66	19 04
New York	19,674	30,942	26,192	8 37	15 10	17 64
Ohio	3,689	4,939	4,728	14 52	17 59	21 83
Ontario	9,000	27,922	29,909	7 84	7 40	8 07
Pennsylvania ..	14,700	16,854	13,339	7 57	14 42	16 86
Tennessee	1,912	2,004	1,673	17 45	19 75	13 47
Texas	1,895	3,966	3,294	8 10	16 32	14 00
Wisconsin	4,834	7,300	5,772	7 37	11 89	15 58
Totals......	91,452	139,581	128,887	$9 50	$13 85	$15 42

Every Grand Lodge jurisdiction shows a decrease in membership during the three past years, excepting Colorado—a young society—and Ontario. They have increased by 4,834 members, and the other nine have decreased by 15,528, making the net decrease in the eleven jurisdictions just 10,694. This is nearly one-tenth. But when we come to look at the death rate cost, we find both Colorado and Ontario have increased, from $5.25 to $8.48, and from $7.40 to $8.07. Tennessee and Texas show a slight decrease, but both are still high at $13 47 and $14.00. The record of New York State for the three years is a poor one, showing a drop in membership from 30,942 to 26,192, and a mortality increase from $15.10 to $17.64. Pennsylvania's score (where the Order originated) is nearly as bad. It has dropped 3,515 members in the three years, and therefore ought, theoretically, to be making money rapidly from lapses. The lapses are there, sure enough, but where's the money?

Let us now arrange the others in groups for convenience, and see how they have prospered. Perhaps they have succeeded better than the A.O.U.W. Most of them operate on a better system—the grading of the death-calls according to age.

About one-half the other twenty-two societies in the list are what may be called Fraternal, and the other half Business associations. We, therefore, give their figures in the form of two tables, relating respectively to eleven fraternal and ten business enterprises. In these tables the growth of membership and of net cost of deaths per $1,000 can be the better seen :—

Eleven Fraternal Associations.

Name of Association	Membership Dec. 31st,			Net cost per $1,000.		
	1884.	1893.	1896.	1884.	1893.	1896.
American Legion..	57,005	60,076	36,028	$9 30	$16 00	$21 80
Cath. Ben. Legion	4,306	31,772	45,051	5 62	13 63	13 30
Chosen Friends ..	22,737	35,892	26,133	7 95	16 99	19 04
Kts. of Honor	128,607	123,354	96,633	11 10	17 15	19 30
" Pythias....	16,489	32,922	46,833	13 20	14 08	11 31
Maccabees	2,127	53,222	118,767	4 00	5 70	6 10
Knights Templar..	4,560	4,403	7,472	8 48	16 00	11 56
Royal Templars ..	15,113	12,957	12,401	7 00	19 86	16 45
" Arcanum ..	53,811	148,426	190,261	7 34	9 05	9 22
Southern Tier	3,397	927	1,090	18 00	30 00	43 20
United Friends....	7,668	20,726	13,264	7 74	13 50	17 20
	315,820	524,677	593,933	$9 07	$15 63	$17 13

The three most striking things in the above table are the disappearance of nearly half the membership of the American Legion of Honor, a Boston concern, and of the Knights of Honor, and the more than doubling of the Maccabees, during the past three years. The Legion, and the Knights, and the Southern Tier (a Masonic society of Elmira, N.Y.) seem to have all come pretty near the quitting place. Their death rates are now $21.80 and $19.30 and $43.20. Many thousands more members have dropped out of these three societies, and lost all, than remain behind. Most of the latter remain, only to lose more.

The following table shows the movement of membership among the

Ten Business Assessment Societies.

Name of Society.	Membership December 31st.			Net cost per $1,000.		
	1884.	1893.	1896.	1884.	1893.	1896.
Bay State Ben. Ass'n..	5,413	16,387	14,041	$7 43	$11 73	$14 50
Covenant Mutual	17,380	45,014	42,312	6 50	10 25	14 52
Equit.-Aid Union	15,613	31,194	Gone.	9 00	16 30	Gone.
Masons' Life Ass'n ..	1,500	7,333	7,472	2 00	11 20	11 56
Maine Benefit Ass'n ..	1,503	6,054	6,041	4 60	10 50	14 70
Mass. Benefit Life....	9,966	35,064	46,399	8 80	14 30	19 60
Mutual Reserve Fund	20,779	82,716	118,449	3 10	12 09	12 52
National Union	5,901	43,559	46,782	3 60	7 45	13 40
N. W. Masonic Aid ..	25,572	45,773	40,104	6 13	12 36	15 69
National Prov. Union	562	6,254	5,912	6 31	13 60	13 40
	104,189	319,348	317,532	$5 75	$11 98	$14 43

These business associationsshow a considerably lower death-rate than the fraternal societies show in the preceding table. The chief reason for this is the younger membership. But the upward run from $5.75 in 1884 to $11.98 in the year 1893, and now to $14.43 in 1896, is sufficiently indicative as to where they are all travelling to. The Equitable Aid Union has got there, and the Massachusetts Benefit, which swallowed up our little Canadian Mutual Aid, is hard after it. The membership of the latter was 51,940 a year ago, and is now down to 46,399, with a death loss cost of $19.50 per $1,000. Many of the healthy members above sixty years of age, in Ontario, have dropped out in consequence of the tremendous jump in the assessments for 1897, above what they were paying in the Mutual Aid. The Mutual Reserve, the Covenant Mutual, the N.-W. Masonic Aid, the Home Circles, the Chosen Friends, the United Workmen, the Select Knights, the Royal Templars, and almost all other societies that have lived long enough to get out of their "teens" have been compelled to greatly increase their assessments or close up.

But the increase can only act as a foil or postponement of the evil day that must come to all after-death assessing concerns. It is impossible that they should prove a permanent success on that basis. Most of the business associations have admitted this, and changed their plans, so as to collect regular monthly or bi-monthly premiums. In doing so, however, they make no provision for any surrender value upon lapse, as a rule, and many persons are now paying more for that which yields them nothing, when inadvertently dropped, than a regular company would charge for insurance carrying cash, or extension, or paid-up benefits. Many people are only now beginning to learn that assessment life assurance is deceptive, costly, uncertain and unsatisfactory, and sure to bring the society practising it to a disastrous end. As for the victim, he is very apt to say: "Assessments now come high, the treasury is running dry, and I better hurry up and die. If I don't get there first, the plaguy thing may burst, and of the two I scarce know which my wife will deem the worst!"

WHAT TO DO IN CASE OF FIRE.

Judging from the tenor of a recent paragraph in an English insurance journal, it is matter for surprise that it should be deemed necessary on this side the Atlantic to give such advice to persons who find their premises on fire as is tendered in the pages of the Coast Review of San Francisco. The English writer asks if it is the practice in America for persons insured against fire to make no attempt to subdue the fire or save the property jeopardized. It must at once be admitted that we on this side the ocean are far more used to the destruction of property by burning and far more careless of the causes and indifferent to the ravages of fire than our British cousins. Some suggestions as to what should be done in case of fire are given by the Review as below: "Give the alarm immediately and try to put out the fire with a few buckets of water. If the fire has already obtained headway, try to save property." And it is properly added, "The policy-holder who makes no effort to save some of his property, or who declines his neighbors' offers of help, lays himself open to the charge of incendiarism."

Hints as to the duty of insurants in the presence of fire are added, and among the points mentioned are several that people need to be kept in mind of:

"Act, during and after the fire, as if there were no insurance. When the fire is extinguished, look carefully after the saved property. Bear in mind that the underwriters undertake to pay you only the damage by fire, not the damage by your neglect. What remains after the fire is yours, not the underwriters'. Remove goods to a dry place, and separate the damaged and undamaged portions. Protect from rains and dews and dust with tarpaulins or canvas, if it is not possible to find better shelter. Disconnect or plug up pipes in the damaged parts of building. Wipe and cover machinery. Dry floors, furniture, counters, shelving, and other fixtures. Guard against thieves and malicious persons, and get everything in good shape for the adjustment of your loss."

CO-OPERATION.

From a commercial point of view, one of the most important features of the Victorian era has been the growth in England of the co-operative movement. There are in the United Kingdom upwards of 2,000 societies, with a membership close upon 1,750,000, with a turnover of about £53,000,000, and a profit distributed annually of £5,500,000. The movement is strongest in Northern England, having met with special favor in the cotton districts of Lancashire. The co-operative societies have entered almost every field of mercantile life. They have undertaken the work of manufacture, as well as that of retail and wholesale distribution, and their operations are very extensive. For the year ending January, 1897, the turnover of the Co-operative Wholesale Society—whose headquarters are at Manchester—was £10,800,000 sterling. This society, which was established in 1864, has now affiliated to it 1,046 retail co-operative societies, and since its inception the returns have totalled £135,000,000. This co-operative movement, commenced in so many countries, has been really and persistently successful in England alone.

In France a number of attempts at co-operation have been made, and some of them have been very successful, while in other European countries moderate progress can be affirmed of individual movements, but in no case have they attained national importance. In America the disciples of co-operation have, in their frequent endeavors to establish societies, met with little else than disappointments. In both Canada and the United States co-operative societies have been started and still exist, but they are confined within very modest limits, and have declined rather than advanced during recent years. The industrial development of America has been during the epoch of Victoria in an entirely different direction. Capital has become centralized, and the centralization and concentration of power in this direction has been carried to such an extent that it seems very unlikely that the co-operators ever will obtain a secure footing on this continent.

MONTREAL PILOTS' STRIKE COLLAPSED.

The strike of the pilots on the St. Lawrence between Montreal and Quebec appears to have quite collapsed. There were several reasons for its speedy failure. The strikers had relied on the concurrence of the pilots below Quebec, and this they did not get, the secretary of the down-river pilots writing on Friday last that they "had no grievances." Then the striking pilots were disconcerted at finding that they were not so essential to the navigation of the river as they had deemed themselves, for a dozen or two other men have been meanwhile found to pilot steamers up and down. Then, again, the resolve of the Harbor Commissioners, by authority of the Government, to place some twenty-five additional beacons and spar buoys along the route bade fair to make the striking pilots' cup of sorrow still more full, for their occupation would in such case be virtually gone. For these reasons, doubtless, they caved in. Some of them are being tried and may be punished for their contumacy. At a meeting of the Harbor Board on Saturday the trial of Prudent Beaudet, who refused to bring up the SS. "Labrador" of the Dominion line on the 10th of June, was first proceeded with. After hearing evidence, the board was unanimous upon his dismissal. The attitude of the Minister of Marine in the circumstances was at first that no set of men should be allowed to interrupt the commerce of the country and damage the interests of its seaports by arbitrary action, such as that of the pilots. He expressed his willingness to grant during recess a commission of enquiry into their grievances, tho' meanwhile, he said, they should return to their occupation. But he has since shown a spirit of leniency, which is resented by the majority of the Harbor Board, for he urges that the pilots be taken back indiscriminately and unconditionally, while "the Government investigates the whole question during the recess." The commissioners would not consent to any such relaxation of discipline, and passed a resolution—three members dissenting—to proceed at once against the five remaining pilots summoned, and when they are disposed of to suspend further proceedings, pending investigation. We think the resolve of the commissioners is the right one. There is such a thing as going too far in condoning so causeless a revolt as that of the pilots. To give in to them is to invite a repetition of the offense. The shipping interests have united in a memorial to the Minister, asking that extended powers should be given to the Montreal Harbor Commission, which, it appears, cannot issue licenses to competent pilots who may apply. New bylaws have been drafted for the board, and the request is urgently made that they may be at once approved by Government.

—The Finance Committee of the United States Senate suffered several unexpected reverses at Thursday's sitting. During the discussion on the tariff bill Mr. Mantle moved to reduce the duty on white pine from $2 to $1 per 1,000 feet, and the motion carried by a majority of 32 to 31.

AN EFFECT OF HARD TIMES.

A very marked decline has come about in the consumption ot spirits and wines in the United States within the past five years. Whether beer-drinking also has declined we are not told, but we should think not—rather that it has increased *pari passu* with the decline in wine and spirit drinking. The *American Grocer* gives the following startling statistics as to the consumption of spirits and wine in the States during the past five years :

	Spirits, gallons.	Wines, gallons.
1892	1.50	.44
1893	1.51	.48
1894	1 33	.31
1895	1.12	.28
1896	1.00	.26

This is the most extraordinary rapid decrease in the consumption of liquor, and the New Orleans *Times-Democrat* thinks there are three possible explanations of it :—

1. That beer is taking the place of whisky and wine.
2. That the temperance movement is making itself felt.
3. That the hard times are causing a reduction in the consumption of those two luxuries, as it is doing of nearly all articles, even those of necessity.

There is every reason to believe the third reason is the explanation of this decrease, says the New Orleans journal. It is true that the American people, largely under the example and influence of the Germans, are turning more to beer, but this movement has been going on for years, and has been very gradual. That such a change from whisky and wine to beer as these figures indicate could have taken place in five years is inconceivable.

"The same objection exists to the temperance proposition. As a matter of fact, prohibition has made very little progress during the last five years, and two prohibitory States have practically abandoned an attempt to enforce prohibition.

"This leaves the hard times as the only explanation of the change. We know that it has reduced the amount of nearly every article we consume, that the people drink less tea and coffee, and put less sugar in it; but no one imagined that in four years from 1893 it had cut down the consumption of spirits more than one-third, and of wine nearly one-half."

As to the theory that when hard times come, and men are embarrassed with financial troubles, they take to drink to drown their sorrows, the opinion is hazarded that Americans seem to be too level-headed for this. He commenced cutting down expenses the moment he saw his income reduced, and he began on the luxuries of wine and whisky.

ACCOUNT KEEPING.

A correspondent connected with the wholesale trade, who has for a long while noticed the crude book-keeping of country merchants, writes us saying : "You must know that what I say is true, and that a lot of storekeepers in country places are very poor book-keepers—in fact, don't keep books at all. You are preaching every week, Mr. Editor, about one thing and another. Why can't you give a sermon to the small storekeeper in the country, who never knows how much he has outstanding on his books, because he never adds it up."

We have known traders who kept their transactions in their memories, not only up to the hundreds, but to thousands ot dollars, and wonderfully accurately, too. But there is no excuse for this sort of mental tally, which is the most dangerous any man can resort to, for if he dies, there is absolutely no record of his outstandings. Keeping accounts may be done in various ways. Everybody does not need a set of double-entry books, but can keep track of a little business by much simpler means. A pencilled blotter is better than none. Robinson Crusoe used to count time by notches on a stick, a notch every day; and not a few country dealers of earlier days in Canada here are said to have imitated him, only, instead of counting time, they counted —do they still count?—dollars and cents, or shillings and pounds, against customers by peculiar notches in sticks or shingles, or laths. And, of course, we know the pot-house method: chalk marks on a board or behind the door. These marks are straight strokes, varied by "p" and "q"—meaning pint or quart. Then there is the farm-house system of dried apples on a cord, like a "string" at billiards; or the blacksmith's memorandum, charcoal marks on the fence or the smithy door. But any of these is better than trusting to memory. Riskiest of all is keeping tally of small debts on a slate, and rubbing out a debit with a wet finger whenever any one pays his account. If you *will*, or if you must do business on credit, by all means keep a proper and systematic account of it by pen and ink.

A FAILURE AND A DISAPPEARANCE.

Something has happened in St. John's, Que., which the inhabitants of that place and numerous merchants in Montreal are more or less puzzled about. The failure of R. Levi & Co., dry goods merchants, of that place, and the disappearance of Mr. Raphael Levi, have given the quiet town on the Richelieu River a genuine sensation. Mr. Levi has "done things up brown," as a correspondent puts it, and must have got away with quite a pot of money, for besides the regular business liabilities of the concern, estimated at $9,000 to $10,000, Mr. Levi spoiled the Egyptians in great style. Not only did he borrow money from all available friends in St. John's, as well as in Montreal, before his flight, but he sold fictitious book debts to local note shavers, and also discounted forged customers' notes to a considerable amount. Of stock, there is hardly left in the premises sufficient to cover rent, and it now appears that Levi had been sending goods freely to Montreal auction rooms for some weeks previously, in some cases goods recently bought never having been unpacked, but immediately re-shipped to Montreal in order that speedy realization might be made on them.

The Mr. Levi who has now obtained notoriety was formerly of Levi Bros., who failed in 1891, when he compromised the firm's liabilities of some $20,000, at 60 cents on the dollar. He failed only the following year owing $17,000, and resumed business in his wife's name. The family has a record for failures which is hard to surpass. The father failed several times, and finally skipped from Moncton, N B., to New York, where he died. Another brother, formerly associated with R. Levi, also made a most disastrous failure as a merchant two or three years ago. It is possible that so flagrant a case as this will somewhat chill the warmth of readiness with which goods are sold on credit in Canada. Considering the record of this man, he obtained supplies of goods on credit far too freely.

WINDOW GLASS THEN AND NOW.

It seems odd, to us who live in these days, to have had a tax laid on window glass, a tax which existed in England all through the eighteenth century. A pamphlet issued the other day by the general agents of the Ontario Accident and Lloyd's Plate Glass Companies reminds us that the window tax was first imposed in 1695, during the reign of William III., to cover the cost of calling in and re-coining clipped coins. It was increased fifty years later, under George II. There were changes in 1778, and then, 1784, the tea duty was lowered and the window tax again increased. After further changes in later years, there was, in 1823, a reduction (William IV.). But the tax was finally repealed July 24th, 1851, by the Government of which Lord John Russell was Premier, and Sir C. Wood Chancellor of the Exchequer. The window tax produced in 1840 no less than $6,250,000, and in 1850 much more, $9,163,420. At the date of the repeal it affected 6,000 houses containing fifty windows and over; 275,000 with ten or more, and 725,000 with seven or more. If it was not a premium on darkness, the tax certainly discouraged light. With freedom of light and air, a great impetus was given to the manufacture of window glass, which became a flourishing industry. To-day plate glass is used everywhere in large and important buildings.

"British Plate," or something like it, is a necessity of our times, and many thousands of these beautiful, though costly, sheets of glass, are used throughout the Dominion. Naturally there is a great risk of accidental breakage, which it is usual to cover by insurance. It is given as an example of the extent of that business, that one company, the "Lloyds," receives in the United States and Canada, from this source alone, premiums aggregating half a million dollars annually.

REFORM OF BURIAL CUSTOMS.

We confess to some sympathy with the aims of a society which has been started in Toronto, whose purpose it is to make plainer and simpler the services connected with the burial of the dead. There is plenty of room for a society of the kind proposed. By far too much money is spent on funerals, on mourning dresses and needless trappings by people who cannot afford such extravagance—for it is nothing else. As the Hamilton *Times* puts it, "Poor widows who will be starving in a few weeks, put up expensive monuments in memory of their dead husbands; bereaved husbands throw away money in funeral and grave decoration, which could be better used in buying bread and butter for the family. Parents waste much money upon their dead children, making ostentatious displays that would be much better omitted." But people cling to the expensive custom, thinking that abundance of mourning is necessary to make a proper show of grief. And, sad to say, rivalry has much to do with funeral display. It is, we understand, by forming a society whose members are pledged to simplicity in burials, that individuals who join it may be induced to abandon a costly custom, the feeling of association strengthening them against the false shame of giving up customary display.

PRESENTATION TO MR. FYSHE.

The late general manager of the Bank of Nova Scotia was not allowed to leave the city of Halifax and the service of the bank without tokens of appreciation. A dinner was given Mr. Fyshe at the Halifax Club a fortnight or more ago, by a number of leading men of the city. And last week that gentleman was waited on at his residence by members of the staff of the Halifax office, and presented with a cabinet of silverware and cutlery suitably inscribed. This, we understand, was the gift of the whole staff throughout the agencies. The successor of Mr. Fyshe in the management of the Bank of Nova Scotia, Mr. H. C. McLeod, formerly the bank's manager in Chicago, was present and made the presentation very gracefully, giving a brief review of the more recent career of the bank, and expressing regret that so able a banker should be lost to that institution and to the province. Mr. Fyshe, in reply, dwelt upon his connection with an institution in which he had spent so many years of his life, and recalled many pleasant association connected with it and with the good old city of Halifax. He leaves this week, we believe, for Montreal, to take up his duties in connection with the Merchants Bank of Canada.

CHANGES IN CABLE TARIFF.

Some changes and reductions of tariff that will be welcome to business men are announced by the cable companies to take effect on Ist July this year. Some alterations are made in the rules for counting and charging words in cablegrams. The Canadian Pacific Company announces on behalf of the Commercial Cable, while the Great Northwestern Telegraph Company gives notice on behalf of the Anglo-American, Direct U.S., and other cable companies with which the Great Northwestern Telegraph Company connects, have made a number of modifications in their rules for counting and charging cablegrams. In messages written in plain language each word is now counted as one word up to fifteen letters, instead of up to ten as formerly; the groups of figures up to five are counted as one word, instead of up to three as heretofore. There are a number of other modifications, but these are the principal ones which affect the general public. The Great Northwestern Company have also considerably reduced their rates on cablegrams to China and Japan, with which countries telegraph business is likely to increase to a considerable extent in the near future. There is a proviso about messages being written entirely in plain language which offers an intelligible sense in English, French, German, Italian, Spanish, Portuguese, Dutch, and Latin. In messages composed of plain, code, and cipher languages, the words are charged for at the rate of ten characters to a word, and the groups of figures at the rate of five to a word. Numbers expressed in figures are counted at the rate of one word for every five figures or fraction thereof, each group being considered separately. Trade marks formed of letters are counted like figures, but when formed of letters and figures the characters interrupt each other, and are counted separately. Example, A5C is counted as three chargeable words.

INSTITUTE OF ACTUARIES.

We are indebted to the assistant-secretary of the Institute of Actuaries, London, for a copy of the report submitted at the fiftieth annual general meeting, held 1st June last. In its first year the institute numbered 434 members; this year it has 826, which number is an increase of 38 over 1896. Seven fellows, six associates and students died during last year. At the examinations held in April last 170 candidates presented themselves and 85 passed.

The following papers were submitted at the sessional meetings of the institute during the year ended with March :—

November 30, 1896—An inaugural address by the president, Mr. T. E. Young.

December 21, 1896—On some Legal Points arising in Life Assurance Practice—Mr. A. R. Barrand.

January 25, 1897 –Rates of Mortality in certain parts of Africa—Mr. A. E. Sprague.

February 22, 1897—Governmental Supervision of Life Insurance in the United States of America—Mr. Sheppard Homans, of New York.

March 29, 1897—Mortality Experience of Assured Lives and Annuitants in France—Mr. G. F. Hardy.

April 26, 1897—On Lost Policies, Certified Copy Policies, Certificates of Title, Possession of a Policy, Notice, Bankruptcy, and some other practical considerations with regard to the titles to Policies—Dr. Sprague.

Considerable progress has been made with the new Mortality Experience Investigation, which is being carried out jointly by the Institute of Actuaries and the Faculty of Actuaries. The total number of contributing offices is 66. Sixty offices contribute their experience in respect of assured lives, and 37 of these contribute also their experience in respect of annuitants, while six offices contribute their experience of annuitants only.

In October, 1896, Mr. George King was appointed honorary editor of the *Journal*, in succession to Mr. Gerald H. Ryan, whose resignation of the post was announced in last year's report. Pending the appointment of his successor, Mr. Ryan had kindly undertaken to continue the duties of editor. The president this year is Thomas Emley Young, B.A., and Mr. Gerald H. Ryan is one of the vice-presidents.

JACQUES CARTIER BANK.

There has been a decided increase in the transactions of La Banque Jacques Cartier during the twelve months ended with May. The totals of assets and liabilities are now $3,902,000, where last year they were only $3,287,000, but the decrease to the latter figure from the $4,495,000 of 1895 was due, as the report of 1896 explained, to the difficulties of La Banque du Peuple, difficulties which induced the directors of the Jacques Cartier to put a check on their operations. The benefits of increased business and moderate profits of the year now under review were partly neutralized by the untoward results of the previous year's business, so that not more than $33,940 of net earning is shown, which enabled the payment of six per cent. dividend, and carrying forward an increased balance.

An increase of $600,000 in deposits during the year just past, and an enlarged circulation, impels the general manager to look forward with confidence to the increase of new accounts and the consequent growth of profits from a French-Canadian *clientele* which formerly relied on La Banque du Peuple for accommodation. And, remembering that La Banque Jacques Cartier had once a paid capital of $2,000,000, it is hardly strange to find him hinting at the increase of its present capital of $500,000, following the recent example of the Bank of Hochelaga. At the same time he recognized that changes in the banking business have made a vast alteration in the rate of profit that it is possible to earn. He says in fact that where 7 per cent. was easily earned fifteen years ago, a bank only earns 4½ per cent. now. Thus a bank must now, "to obtain a satisfactory rate of earning upon its capital, multiply its operations, keeping at the same time on the alert to counterbalance the difficulties which those new conditions present."

FREE MILLING GOLD QUARTZ.

It is some months since we first heard accounts of the free milling gold quartz deposits at Harrison Lake, British Columbia, and of the formation of a company to work them. This week we hear further from that district ; another mining company has been formed to work this quartz. The parties are : Mr. Brown, of Harrison Lake, Mr. D. J. Munn, of New Westminster, the Messrs. Leckie, of Vancouver, and others, and the name of the mine is the Fire Mountain, and $50,000 of its stock has been sold at 50 cents and upwards, yielding, we are told, all that is needed for development. The property which this company is now working is twelve miles from Harrison Lake, and its richness was discovered by the circumstance that an avalanche of snow which fell last winter scraped away the surface earth and exposed the rich quartz. Assays made at Tacoma, San Francisco and Toronto, show values of $75 to $900 per ton. A road is now being built over these twelve miles, which will connect the mine with the town-site of Tipella (Indian for Fire), also owned by the company, on Harrison Lake. This done, the mine will be able to ship to good advantage, for it is but 100 miles from Vancouver, and the Lake and the Fraser River can be cheaply utilized. There are already two steamers plying on the lake, and a third is expected shortly, to tow barges and the like. The fame of these deposits is attracting visitors and workers, with the usual increase of commercial activity.

FOR GROCERS AND PROVISION DEALERS.

The crop movement of the Brazil grades of coffee continues full, the receipts at Rio being 7,000 bags and at Santos 14,000 bags for two days.

Advices recently received are to the effect that further damage has been done to the Sicily and Bari almond crops, and that prices in the primary market have advanced considerably.

The first exports of cheese from the United States are believed to have been made about 1826, when Harry Burrell, of Herkimer county, N.Y., opened a regular cheese trade with England.

Reports from the Maritime Provinces indicate a partial failure of the spring mackerel fishery this season. The "strawberry" catch of mackerel, as it is called, is due at the date of the first full moon after July 1st, and for this the prospects are said to be very good.

A movement is on foot to establish a cheese board in Ottawa. A committee to collect information in regard to cheese has been appointed by the board of trade. It consists of Messrs. H. Conn, C. Mohr, J. Ballantyne, J. Kavanagh, F. McDougal, G. Burn, and W. L. Marler.

A leading dealer of St. John, N.B., according to a correspondent of the *Maritime Merchant*, estimates that the pack of alewives of St. John this season will total about 10,000 barrels, or some 4,000 barrels less than last year. The catch was fair this year, but there has been a very large demand for the fish for bait for the line-fishing fleet.

The Fresno, Cal., *Expositor* states that there is a great diversity of opinion among the vineyardists, even from the same neighborhood, as to the prospects of the raisin industry. While some claim that almost, if not quite, a normal crop will be gathered, others declare it will not exceed that of last year, owing to damage by the thrip and from other adverse conditions.

Never before in the history of the Leamington fruit section, says the St. Thomas *Times*, has there been such a crop of strawberries. During this week the express company has shipped 119,335 pounds of berries, or a little over 4,000 crates, to Montreal, Ottawa, and other points east. Two cars go west every night from Leamington, and the growers are reaping a rich harvest.

The St. John, N.B., market is pretty nearly bare of Porto Rico molasses. One cargo is loading for that port and should come on a good market, with higher prices in prospect. There are fairly large stocks of Barbadoes there, with considerable more to come forward, and no improvement in price is at present looked for. Prices at present are steady, and the demand has been quite active during the last week.

The news from the North is that the canneries on the Skeena River are busily engaged fishing for spring salmon. Up to the date of the steamer leaving, they had put up on an average 300 cases each cannery. The canners are paying 25 cents a fish, and there are plenty of fishermen at that price. The daily average catch per man is from 10 to 12. The sockeyes are already commencing to run, some having been caught in the nets set for the spring salmon.—*Vancouver News-Advertiser, June 22nd.*

One week's shipments of Canadian cheese from the St. Lawrence to ports in the British Islands looks well in print. To London, in the week ended June 26th, there went 33,000 boxes ; to Bristol, 18,500 boxes ; to Liverpool, 13,000 boxes ; to Glasgow, 8,500, and to Leith and Manchester smaller but considerable quantities. The total export for the week was 78,499 boxes, which is 10,250 boxes more than in the corresponding week of 1896. Exports of butter were larger last week, too, reaching 7,250 packages.

—The bankers of Detroit have effected the organization of the Bankers' Club of Detroit. The executive committee consists of Emory Wendell, president ; George H. Russel, vice-president ; Joseph Taylor, secretary and treasurer ; S. M. Cutcheon and Alex. McPherson. The organization is patterned after a similar club in Chicago, and the annual dues have been fixed at $10. There will be two regular meetings each year, in the nature of a club dinner, at which prominent speakers from Michigan and other States will be present to address the company on subjects of interest. It is expected also that there will be special similar meetings, called by the executive committee, one of which will be called probably in the near future.

The Cincinnati *Price Current*, June 24th, says : The records for the past week show that instead of continuing the decreasing tendency in marketing of hogs which was disclosed during two weeks previously, there has been an enlargement, and Western killings have reached a total of 450,000, compared with 415,000 the preceding week and 370,000 for corresponding time last year, making a total of 5,815,000 since March 1, against 5,240,000 a year ago—an increase of 575,000, or nearly 11 per cent. The quality of the current marketings is good, and there appears to be no evidence of undue exhaustion of supplies, although it is not to be expected that the offerings will continue on such a liberal basis as noted for some weeks past. The average of prices of hogs at the close is about 5c. per 100 pounds lower than a week ago.

ABOUT DRY GOODS.

The estimate of the supply of raw silk from this year's cocoon crop is now reduced to 15 per cent. less than last year in Italy and 20 per cent. less in China.

The retail millinery houses of the Maritime Provinces complain of a poor season's trade. Dealers who began the season with moderate stocks are congratulating themselves, while merchants who made provision for a large business must suffer considerable losses.

While raw silk prices this year are lower than twelve months ago, the prices paid for new cocoons in France have been the same as last year, the average in the Cevennes having been 280 to 290 francs per kilo. In Alais 3 francs per kilo was the ruling price for some time, and good quantities of cocoons found buyers at this figure, which seems to be the highest reached in France.

Advices from Manchester, New Hampshire, state for the first time in four years the Amoskeag, Amery, Stark and Jefferson mills will not make their usual June shut-down. This throws 14,000 hands out of employment every year. There is great rejoicing there in consequence of the decision to keep running. The mill companies have received orders for sixty new patterns of 25,000 pieces each.

The attempt made by the wholesale merchants of New York to secure cheap rates from the railway companies for a "buyers' excursion," is meeting with opposition at the hands of mercantile interests in other cities. The merchants of Philadelphia, Boston, and other large centres of trade, are asking similar rates, or, at least, that all buyers be given stop-over privileges on tickets issued to New York.

A wag lately said, writes the Paris correspondent of the *Dry Goods Economist*, that any one could see high winds had been prevalent this season, as all the women had their hats blown on one side. And, indeed, this cocking up of the hat on one side is the leading feature of the latest devices in millinery. Another feature is the immense use made of white—white ostrich, white paradise and osprey, white wings and birds, white gauze and tulle. Mixtures of white and black, gray and black, and white and gray continue to be much the vogue.

A Manchester correspondent writes June 18th: "Handkerchiefs in special designs, many not at all complimentary to Her Majesty, have been produced extensively, and there is a prospect of good returns from the colonies, although it is too early as yet to say how consignments of these goods have fared in Canada and the Antipodes. The silk trade is fairly active. Ribbons have been bought, and some handsome designs are in the market. The inquiry for laces is fair. There has only been a moderate turnover in the print departments. There is a lull just now in the dress goods trade. French houses have been competing keenly for some time with Bradford firms, and Germany has in a sense entered into the spirit of the movement."

—Steam barges and their consorts, that is, one or more vessels of steel or wood towed by a steamer, do a large proportion of the freight traffic of the Great Lakes to-day. In view of the large proportions attained by this industry, a decision of the Supreme Court of the United States affecting the rights and duties of such steam barges assumes importance. This decision is to the effect that a steamer may desert her "tow" in a storm in order to save herself, and no damages can be obtained against her for so doing. The case in question was fought, step by step, through the American courts for nearly a score of years, and at last, on May 31st, the last court of resort, the United States Supreme Court, has decided against the owners of the barges "Eldorado," "George W. Wesley" and "Bay City," and against the owners of the steamer "J. B. Donaldson." The court held that when a steamer is compelled to desert her tow in a storm for self preservation she cannot be held liable for any general average loss sustained by the tow. This establishes a precedent which attracts widespread attention.

—Announcement is made on behalf of the city of Quebec, by Messrs. Coates, Son & Co., of the conversion and redemption of various sterling debentures of the city. Holders of the outstanding debentures are invited to exchange their present holdings either for new 3½ per cent. consolidated registered stock of the city, or cash upon stated terms. The stock to be issued in exchange for the bonds surrendered is part of a total authorized issue of £654,480 sterling.

ANSWERS TO ENQUIRERS.

S. B., Galt.—Neither Boston nor Baltimore, as cities, so far as we know, sent such a message to Queen Victoria as you describe. Do you not mean the New York Chamber of Commerce, which on June 21st sent a cablegram of the following graceful tenor?:—

"*To Her Gracious Majesty, the Queen of England:*

"The Chamber of Commerce of New York, which received its original charter directly from the hand of your illustrious ancestor, King George III., tenders its congratulations on this happy occasion, and in the spirit of national amity unites with your loving subjects in the earnest prayer that God may bless the Queen.

"(Signed) ALEXANDER HECTOR ORR,
"President."

SUBSCRIBER, Oshawa.—According to the Blue Book the total number of Canadian cattle exported last year was 96,448 cattle for 1896, against 94,972 cattle for 1895.

INSURANCE MATTERS.

Thr Order of the Iron Hall is one of the assessment orders which obtained enormous proportions in the States and ran away with a good many Canadian dollars. Our readers will remember that a few years ago it was discovered that the managers of the order stole hundreds of thousands of dollars of its funds, and were proceeded against in the courts. A week or two ago, says an Indianapolis despatch, "F. J. Failey, receiver of the Iron Hall, filed his report covering the time from October 21st, 1895, to June 7th, 1897. A summary statement shows that at the time of the last report there was on hand $178,219, to which had since been added $12,617. Of this $126,447 had been distributed, leaving a balance now on hand of $64,000. Against this sum outstanding claims depending upon court decisions, among which is $13,000 for taxes. The report states that the only obstacle to a fina order as to the receivership is the settlement of the trust estate of the Muyna Banking Trust Company, of Philadelphia, which is expected in September next. The case is one of many which show how the funds of trusting members of hat-passing insurance concerns are squandered by managers with high-sounding titles.

CLEARING-HOUSE FIGURES

The following are the figures of the Canadian clearing-houses for the week ended with Thursday, July 1st, 1897, compared with those of the previous week:

CLEARINGS.	July 1.	June 24.
Montreal	$10,401,621	$9,365,256
Toronto	5,627,622	5,256,468
Halifax	1,056,156	929,825
Winnipeg	1,324,304	978,349
Hamilton	588,006	459,324
St. John	551,923	533,399
	$24,231,609	$17,522,621

Aggregate balances this week, $3,419,970; last week, $2,333,906.

—The Ottawa Board of Trade has appointed a Chamber of Arbitration consisting of the following gentlemen: Messrs. P. I. Bazin C. Berkeley Powell, P. Larmonth, Sheriff Sweetland, A. Pratt, J. R. Armstrong, C. Jackson Booth, James Ballantyne, F. H. Chrysler, A. W. Fleck, J. M. Garland, Jos. Kavanagh, Geo. S. May, Wm. Scott and Peter Whelen. Boards of Arbitration have performed good services in other Canadian cities, and it is thought the new chamber will be as useful to the trade interests of Ottawa.

—A startlingly sudden death was that of Mr. W. R. Racey, agent at Fredericton, N.B., of the Merchants Bank of Halifax. While on horseback, half a mile from that city, he dropped from his saddle to the ground, dead from heart disease. Mr. Racey was born near Sarnia, Ontario, but had been a resident of the Maritime Provinces for the past twelve years, and had served the last four years as inspector of agencies of the Merchants Bank. He was a good officer, and much esteemed in Halifax, where he long resided.

—It is announced in the last issue of the *National Review*, of London, as if on authority, that Great Britain is willing to re-open the Indian mints, and contribute to the rehabilitation of silver by extending its use in England, and empowering the Bank of England to use its silver reserve.

Meetings.

JACQUES CARTIER BANK.

The annual general meeting of the shareholders of the Jacques Cartier Bank, was held in the office of the bank, Montreal, on Wednesday, the 16th June, 1897. There were present: Hon. Alph. Desjardins, Messrs. A. S. Hamelin, Dumont Laviolette, G. N. Ducharme, Hon. J. G. Laviolette, Messrs. J. P. Lebel, H. Laporte, Arthur Roy, Thos. Gauthier, H. H. Ethier, A. Larose, Hubert Desjardins, and M. Guerin.

Hon Alph. Desjardins was called to the chair, and Mr. Tancrede Bienvenu, general manager, was requested to act as secretary.

The president read the following report, presented by the directors on the affairs of the year just closed:

REPORT.

"GENTLEMEN,—The directors have the honor to present you with their report on the operations of the bank during the year ending May 31st, 1897:

Balance at the credit of profit and loss account to the 30th May, 1896	$ 7,352 18
Net profits of the year ending 31st May, 1897, deduction being made for cost of management, interest on deposits, and possible losses..	33,940 61
	$41,292 79
Less appropriated for:	
Dividend 3 per cent., paid 1st December, 1896	$15,000 00
Dividend 3 per cent., payable 1st June, 1897	15,000 00
Balance at credit of profit and loss, 31st May, 1897	11,292 79
	$41,292 79

"While the figures above given indicate but a small increase in the balance at the credit of profit and loss, it affords us pleasure, nevertheless, to be able to tell you that there has been a marked improvement in the business of the bank since your last report, which you will notice by a comparison of the figures of the statement now submitted with those of last year.

"The directors of the bank, with the intelligent and energetic assistance of the general manager, have continued to exercise that prudence judged necessary to meet those exceptional circumstances indicated to you last year. These measures have had the good result anticipated by the management.

"Judging from the more and more lucrative operations of the past season, the directors have every reason to regard as assured an appreciable increase in the profits of the bank for the coming year.

The head office and the various branches of the bank have been regularly inspected, and your directors must bear testimony to the zeal and intelligence with which the general manager, as well as the other officers, have fulfilled their respective duties.

"The whole respectfully submitted.

(Signed)

"ALPH. DESJARDINS,
"President."

In moving the adoption of the report, the president made some remarks on the peculiar circumstances the different banks had to encounter during the past year, referring especially to those affecting the Jacques Cartier Bank in particular. The general business depression, resulting from the scarcity of work, the low price of agricultural products, and especially the uncertainty created by prospective changes in the fiscal policy of this country and of the United States—these are the causes which indicate the difficulties of making the profits which should attend the operations of a bank under ordinary circumstances. He referred to the specially critical conditions met with by the present manager, and which brought out in bold relief his energy and business-like management. The shareholders are invited to satisfy their legitimate curiosity as to the special study he has made of the bank's affairs since he assumed the duties of his office. We must not content ourselves, he added, with merely providing for the necessities of the present, we must look forward to the conditions of the future. It is well to study the measures necessary to be adopted to realize the position the founders of the bank and those who worked after them were ambitious of securing for it. The experience of the crisis of the past two years has demonstrated that, more than ever, we must hold to those rules of prudence which are the security of banks. It is to this, as the report shows, that the board of directors have applied themselves, and no doubt the explanations by the general manager will give every satisfaction in this regard.

Mr. Tancrede Bienvenu, general manager, afterwards read the general statement of the affairs of the bank up to 31st May, 1897:—

Liabilities.

Notes in circulation		$444,403 00
Deposits bearing interest	$2,253,164 48	
Deposits not bearing interest	416,440 23

(Signed)

TANCREDE BIENVENU,
General Manager.

GENERAL MANAGER'S REMARKS.

Mr. Bienvenu said: Following the custom of this bank, I will only add a few words to the remarks of the president, leaving to institutions of greater importance the task of furnishing to the public observations relating to the political, commercial and financial events which may have influenced, favorably or unfavorably, the year's business. You will permit me, however, to make a few remarks whose bearing will be intimately connected with the commercial transactions of the Jacques Cartier Bank. During the whole course of the financial year your institution has continued with unfailing energy the development of the resources at its disposition. But, whatever may have been the importance and the increase of the bank's business, compared with that of last year, we have simply counterbalanced the unfavorable effects of those circumslancees which marked the year 1896. Consequently the net profits realized show but a slight increase in the balance carried to the credit of the profit and loss account. During the last two years our cash reserves and demand loans on stocks and debentures, which form our immediately available resources, have been maintained in a proportion sufficient to meet all demands, and although this measure of prudence may have had the effect of diminishing our sources of revenue, we hope that you will share with us the satisfaction of finding ourselves in presence of a relatively favorable statement.

You will observe that our deposits have increased by nearly $600,000, which shows that the public has growing confidence in your bank, a confidence which we hope to merit more and more by continuing this line of conduct.

The amount of notes in circulation has also increased to such a point that the board of directors has often regretted that the limited amount of capital stock has prevented the bank from benefiting from a more extensive circulation, and which would permit enlarged operations

During the past year the directors applied themselves with energy to the consideration of applications for the opening of new accounts, caused by the going out of business of an important financial institution, which had recruited its clientele amongst the principal French-Canadian business firms of this city; and they have taken necessary measures to extend the accommodation these had a right to expect from your institution.

The conditions under which banking business is carried on in the past few years have been completely changed. The demand for money has so changed that we find that earnings of 4½ per cent. are equivalent to 7 per cent. fifteen years ago. The situation which we have to face requires different work from that formerly exacted in order to assure success. A bank must at present, to obtain a satisfactory rate of earnings on its capital, multiply its operations, keeping at the same time on the alert to counterbalance the difficulties which these new conditions present.

It will be very agreeable for you to learn that the upper stories of your superb building are let advantageously this year. Two assurance companies which are making marked progress, have taken possession of all the offices to let for a relatively long term and at remunerative prices. The interest upon the cost of this building, which has been in the past carried mainly by your institution, will be shared hereafter, thus largely diminishing the general expense of administration. It is advisable to tell you that certain improvements will become necessary in order to obtain greater profits and to give entire satisfaction to our tenants. We have already made some important changes. This building was erected at a period when your bank had a capital stock of $2,000,000, and I ought to mention on this occasion the desire of some of our most important stockholders and a number of business men, friends of the institution, to see the capital of the bank increased with the object of making up for the reduction of the capital to which I have already alluded, following in this the example of another French-Canadian bank which has lately increased its capital to $1,000,000. Then French-Canadian commerce will find in its own institutions a large part of the accommodation of which it has always stood in need. We, therefore, ask all our stockholders to carefully study with us the advisability of this proposed increase, convinced that this measure will better serve their interests and those of commerce in general. In conclusion, it is my duty to accord our officers special mention for their services and devotion. Those of our staff who understand our views, join in our efforts and serve the interests of the bank with a zeal in which enters a veritable affection for your institution.

Upon the proposal of the Hon. J. G. Laviolette, seconded by M. H. H. Ethier, Messrs. Thomas Gauthier and Arthur Roy were named scrutineers.

The election of directors was then proceeded with, with the following result: Hon. Alphonse Desjardins, Messrs. A. S. Hamelin, Dumont Laviolette, G. N. Ducharme, and L. J O. Beauchemin.

At a meeting of the new board of directors, which took place immediately after, Hon. Alphonse Desjardins was re-elected president, and M. A. S. Hamelin, vice-president, for the current year.

—According to the cycling dictionary, a pedestrian is a fellow who is always in the way.—*Somerville Journal*.

BUY RIGHTLY.

The clothing business now requires more careful attention to buying in order to win success than it did ten or even five years ago. There are several reasons for this, says the *Reporter*, one of which is the large and continued growth of firms who make clothing to order at low prices—almost as low as prices charged for ready-made clothing. These firms have agents who travel through all parts of the country, and they also send their sample books and measurement blanks to even the smallest towns. However, a bright and progressive merchant can overcome this phase of competition by the right kind of management. He can do it in two ways; first, by careful buying of his ready-made line, insuring that every suit which he places in stock will be good value and give his customers entire satisfaction for the price paid, whether it be only $5 for the cheapest kind of suit, or $25 for one of those which the manufacturer claims to be "equal to custom made." Careful buying is more important than many of the best retailers realize, for the clamor for low prices has affected the clothing business quite as much as any other branch of trade, and some unscrupulous manufacturers in crowding down prices have also crowded down qualities in a way that makes their product dear at any price. A careful retailer who wishes to build up a lasting business and hold the confidence of his customers will avoid clothing of this kind as he would avoid the plague. It is possible to build up a paying clothing business, even in the face of apparently the most adverse circumstances.

A man who has bought a suit at your store and has been persuaded to pay a little more than he expected to in order that you might give him good value, will have more confidence in you in the long run and be more apt to return to your store a second time. It may be necessary in connection with your clothing business to have the sample books of concerns who make clothing to measure at low prices. You can then give your customer the choice of buying a suit in that way and waiting for it to be made up, taking the risk of fit, or give him the opportunity to select from your stock, supplying his needs at once and making sure by trying on that he is getting just the fit, just the material, and just the cut that he desires. This will be much easier than trying to convince him that it is poor policy to order clothing made away from home, for in giving him a chance to choose you lead him to think that it is immaterial to you which plan he pursues, and that in suggesting that he make a selection from stock you do so for his benefit and not your own.

MINERALS IN THE UNITED STATES.

Some particulars of the mineral industry of the United States are given in the statistics furnished by the *Engineering and Mining Journal* of New York, showing the production of minerals in the U.S. in 1896. The total value of the mineral yield reached a sum of 751¾ million dollars, as compared with 733 million dollars in 1895. Of the total for the latest year, 495¾ million dollars was the value of the non-metallic products, while 256 million dollars was that of the metals. Activity in the older mining regions of California and other States, and the increased production of Cripple Creek and of some minor districts in Colorado, with improvements in several other States and in the territory of Alaska, carried the gold production up to 58,660,727 dollars, showing an increase of 11,830,527 dollars over 1895. The gain was not the result of new discoveries, which were few in number and generally of slight importance; it came rather from an extensive and better working of old mines, and from increased skill and care in treating the ores. The production of silver showed a large increase over the previous year, the total refined or obtained from American ores having been 56,222,322 fine ounces, or 9,891,087 ounces, or 17 per cent. more than in 1895. In addition to this product there was obtained by smelters and refiners from foreign ores and bullion—chiefly from Mexico and British Columbia—33,053,555 ounces, making the total quantity of silver put into marketable form 89,275,877 ounces.

- He was a young and briefless attorney, who had been genteelly starving to death in a Chicago skyscraper for several years. The other afternoon a stranger wandered into the office, evidently by mistake. He held a slip of paper in his hand and said that he was "looking for a lawyer by the name of ——." "Ah, yes, certainly, sir—sit down," said the excited young attorney. "Well, you see, it's this way, mister," began the caller. "I've been sued by a feller out in Cicero. Between you and me, I hain't got any case at all; but I've got enough money to make a fight, and I'm going to do it." "My dear sir," said the lawyer, grasping the visitor by both hands, "don't say another word. You have the best case I have ever seen."

A JAPANESE MOVE?

The Japanese Government has taken, says the Victoria *Times* a step which may lead to the headquarters of many of the Victoria sealing schooners being moved from Victoria to one of the Japanese ports, and to their flags being changed from the British to the Japanese All this, if a statement contained in a private letter received from Hakodate, now in the possession of Collector Milne, is borne out by the facts. According to this letter the Japanese Government, who have apparently in recent years taken little notice of the sealing industry, have had a bill passed through the Diet to subsidize the sealers. In view of the fact that the gentleman who wrote the letter is well posted in sealing matters, and the Japanese Diet have since the war with China done a lot of subsidizing to build up their shipping interests, it would seem highly probable that such a bill has been passed.

The writer of the letter states that the bill, which is to come into force immediately, provides for a subsidy for Japanese steamers engaged in sealing of five yen per ton per annum for every registered ton, and for other Japanese sealing vessels five yen per ton per annum up to 200 tons, and in addition ten yen per annum for each member of the crew over sixteen years of age. Collector Milne has written Consul Nosse, at Vancouver, for information regarding the bill, the presumption being that if such a measure was passed he would be informed of it. The sealers have also written to Japan for confirmation of the report, and until they have something official regarding the bill prefer not to discuss it.

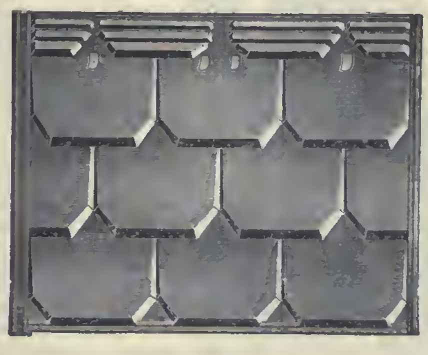
Eastlake
Steel Shingles.



Shows One Shingle.

These shingles have been on the Canadian market for the past 12 years and have never failed to give satisfaction.

They are absolutely fire, lightning and storm proof and are very easily applied.

Our Catalogue will tell you all about them.

We make them of either galvanized or painted steel as preferred.

THE SHIPWRECKS OF A YEAR.

The year's shipwrecks make the subject of an interesting compilation in a recent issue of *Engineering*, of London. It appears from this that during the past year 984 vessels of 708,459 tons were wrecked, lost or burned, or passed the narrow border from usefulness to decay. This is about an average result, although in 1895 there were 1,237 vessels of 806,278 tons on the list; but then the average of several years was exceeded by 120,000 tons, so this year's statistics are only a return to their former state. This is fairly satisfactory, for the total volume of shipping continues to increase, and thus the death rate is not so high. The ratio is only 3¼ per 100 tons owned. The last quarter of the year has been heaviest in its harvest of wrecks, the number being 327 and tonnage 202,676 tons, while the first quarter of the year naturally comes next with 282 vessels of 195,480 tons. The June quarter has only 164 vessels of 147,579 tons. The proportion of steamers to the total losses is rather larger than usual. As a rule, from 55 to 60 per cent. of the tonnage lost is of sailing ships; this year, however, less than one-half of the tonnage is of sailing ships—720 of 353,040 tons. Although the number of steamers lost is only 264, the tonnage is 355,419 tons, so that some large craft are included.

In view of the wide ramifications of the British fleet, which equals that of all other nations combined, it is gratifying to note that the percentage of loss is only 2.31 per 100 tons owned, while over the whole list the percentage is 3¼. Some of the European nations, it is true, have a ratio of less than this, but it should be remembered that the total includes 65,000 tons of vessels that have been broken up, or more than one-half of the total broken up in the world. Indeed, this equals one-fourth of the total British losses, and no other country attains such a low percentage of actual loss by misadventure as in the case of the British fleet. Norway's loss is equal to 5.06 per 100 tons owned; that of Italy, 4.32; Sweden, 3.7; Austria-Hungary, 3.44; United States of America, 3.10; Spain, 2.63; Holland, 2.6; Russia, 2.14; Denmark, 2.13; France, 1.86, and Germany, 1.35 per 100 tons owned.

EXPORT TRADE IN AMERICAN BICYCLES.

During the nine months ended March 31st of the fiscal year 1896-97, the exports of American bicycles amounted in value to $4,165,680; and in view of the fact that in past years the shipments have been heaviest during the last quarter, it would be scarcely an exaggeration to place the probable exports for the whole twelvemonth at $6,000,000.

During the fiscal year ended June 30th, 1896, the exports of bicycles from this country amounted in value to only $1,898,000. Great Britain and her Colonies took the greater part of our exports in this line, as is the case with all exported products of the United States; and the phenomenal growth of American competition has caused no little anxiety in the British bicycle trade. The British exports of bicycles last year amounted in value to £1,860,972; and, says *The Saturday Review*, "in all probability America will beat us next year." A conference of British manufacturers has been called for a discussion of ways and means to cope with the situation; but instead of endeavoring to arouse a feeling in favor of protective duties, the members of the British bicycle trade will probably seek a remedy either in the reduction of prices, or in an improvement in the quality of their products. How un-American!

NEW RULES AT SEA.

On and after July 1st next the movement of ships on the high seas throughout the world will be governed by the rules of the road adopted by the International Maritime Conference at Washington in 1889. During the eight years which have intervened, the new rules have been subjected to much criticism from over-conservative shipmasters, and as a result a few modifications have been made in the code of sound signals evolved at the conference. It would have been easier to find fault with the new international rules of navigation on the score of their conservatism than on account of any radical departure from the old regulations; for instance, the former rule that in fog or heavy weather steam vessels should proceed at moderate speed has been retained, without any definition of the permissible rate. Each captain will thus be left to determine what is "moderate speed," and there is nothing in the new regulations to prevent the captain of a 22-knot Atlantic liner from racing through a fog at a 15 or 20-knot gait. Notwithstanding some shortcomings, however, the new regulations contain substantial improvements upon the old, and if carefully observed they will tend to diminish to a measurable degree the risks of a voyage at sea.—*Philadelphia Record*.

FREAKS OF ENGINES.

(Locomotive Engineering.)

Defects often develop in steam engines and other machines that are very mysterious in their origin, and call for great ingenuity in detecting the cause. Unless a man in charge of an engine develops habits of close observation, he is likely to be easily beaten when anything unusual takes place.

We read lately of a tendency to run away of a Corliss engine, which was a great mystery for a time. The engine would speed up for a few moments without any apparent cause, and drop back to its normal speed without anything being done. The engine was taken apart and examined carefully, and particular attention was given to the governor, but nothing wrong could be found. One day, while the engineer was looking at the engine, it suddenly speeded up about fifty revolutions above the normal, and before the steam could be shut off it dropped back to the regular speed The engine was stopped, the governor again taken apart, the valve mechanically examined and a minute inspection made over the whole machine, and nothing could be found the matter.

Some of the people about were beginning to think this erratic engine was acting outside of natural laws, and that a real mystery surrounded the tendency to run away. By accident the engineer grasped the governor belt, and was surprised to find that the pulley turned on the shaft. The pulley was of the common kind, made in two pieces and bolted together, being held to the shaft by the friction of the parts. The bolts had worked loose and permitted the pulley to turn on the shaft at short intervals.

When hearing about this mystery the surprise we experienced was that the engineer did not thoroughly examine the pulley after he had looked at the governor.

OTTAWA DEBENTURES SOLD.

Another good sale of civic debentures has been made. Tenders for debentures totalling $297,776 were opened by the finance committee last evening These include $131,000 for local improvements, $75,000 for waterworks extension, $55,000 for new fire appliances and fire stations, and $36,000 for public shool purposes.

Mr. A. Jarvis, of Toronto, was the highest of the six tenderers. He offered $312,826, which is equal to a five per cent. premium. The tender for forty-year debentures is equal to a premium of 6 8-10 per cent. Other tenderers were Mr. Wm. Mackey, Hanson Bros., Cassels, Son & Co., James A. Meldrum, and the Molsons Bank. This is the best sale of debentures the city has ever made.—*Ottawa Journal*.

—The comparative statement of pauperism shows that in March, 1897, in respect of England and Wales, the number of paupers in receipt of relief was smaller than in the two preceding years, but that it was larger in each week than the number relieved in ten out of the twenty-one preceding years. It was, however, notwithstanding the increase in population, smaller in each week than the number relieved in the corresponding month in any year from 1857 to 1875.

—Lord Esher, Master of the English Rolls, still active at 82 years of age, has been giving some unconventional dicta from the bench of late. In an action for libel involving the professional sensibilities of two musicians, one of whom was Tito Mattei, the composer, the judge stopped a lawyer who wished to quote authorities as to what may be libel, saying: "If you do, it will be a serious libel on us. We ought to know enough law to decide a wretched case of this size, where the damages were only £20, without counsel having to help us by referring to authorities. Do shut up your book."

ORE SHIPMENTS FOR THE WEEK.

During the week ending June 12th, the Trail Creek smelter sent forward nearly $100,000 worth of matte, its shipments comprising the bulk of the mineral exports of the port of Nelson for the past week. The entries for the week were:

—"I discovered a gold mine," said the forty-niner. "I invented a torpedo boat," replied the genius. Then they shook hands like brothers and pooled their capital to buy a cheap dinner.—*Detroit Free Press*.

Commercial.

TORONTO MARKETS.

TORONTO, 1st July, 1897.

DAIRY PRODUCTS.—There has been some improvement in the dairy butter trade. The quality of offerings is good. For pails and tubs merchants are quoting 11 to 12c., while pound prints are worth 12 to 13c. per lb. The local cheese trade is quiet and steady, jobbers quoting 8¾ to 9c. per lb. There has been less demand for eggs this week, doubtless as a result of an increasing abundance of food substitutes in the shape of green fruits. Deliveries are about equal to the demand, with sales at 9½ to 9¾c. per doz.

DRUGS.—Business in general drug supplies has been good the past several weeks. Merchants' supplies of hellebore are not abundant; the consumptive demand is good, with quotations 13 to 15c. For Paris green there is active enquiry; the market remains firm at 13½ to 15c. Tartaric acid and citric acid are reported firm; the duty of 20 per cent. recently placed by the Government, together with firm values in primary markets, has resulted in an appreciation of prices. Collections are very satisfactory. A New York advice, June 26th, says: "Opium was rather more firmly held at $2 25 in case lots, and $2.30 in smaller packages. Neither manufacturers nor jobbers were anywise free buyers, and the better tone to the market seemed due chiefly to more temperate competition between prominent local and out-of-town holders. Quinine was without change in any respect. Manufacturers' agents quote former list prices, but take very few orders, although delivering to a fairly liberal extent on old contracts. Norway cod liver oil was rather more active and the market shows firmer tone, with prices rather higher."

GRAIN.—During the week the wheat markets have been unsettled. Activity at the beginning of the week has resulted in depression at its close. In the local market wheat is dull and depressed, values, however, remaining as quoted last week. Some transactions in red winter at 69c., and white at 70c. Middle freights are reported for export shipment. This enquiry has now fallen off. The most interesting news from Europe is to the effect that rainy weather continues in Hungary, and gives serious apprehensions for this year's harvest; some districts in central Hungary are partly submerged. Hungary is likely to yield 4,000,000 double cwt. less than 1896; other crops as bad. Advices from different parts of Canada indicate continued weather conditions favorable to the growing crops. Peas are firm and in good demand for export, with quotations 1c. per bush. in advance of last week. Oats continue strong at an advance of 1c. per bush.; the enquiry for export is good, but stocks here are limited. There is some demand for rye, but in the absence of supplies little trading is being done.

The stocks in store at Port Arthur on June 19th were 1,584,204 bushels, and there were received 299,844 bushels, and shipped 281,355 bushels, leaving in store on June 26th, 1,602,694 bushels.

GROCERIES.—There is a fair amount of trade passing. For sugars, the demand has improved with the presence of the fruit season. Values are as last reported. Stocks of sugar in the hands of the wholesale trade are not large, and refiners' agents report a fair amount of business passing. The new season's Japan teas are attracting considerable interest. Canned salmon is selling, in best brands, 1 to 5 case lots $1.30, and 5 cases and over $1.25. Values are somewhat easier than during the last season. The small shipments of canned lobsters which we reported last week are about exhausted. New shipments are expected soon. The packers have not sufficient goods on hand to meet their accepted orders, and are distributing stocks in small quantities to purchasers.

HARDWARE AND METALS.—The opinions of wholesale merchants are not in harmony as to the conditions of trade. A number of houses report business as very quiet, while others say an active trade is being done. The movement in harvest tools, garden tools, horse yokes and similar goods is thought to be fully up to a season's average. In metals there is little new to report. Values remain very steady, and few changes in quotations have been made since our last report.

HIDES AND SKINS.—The market has developed no new features of special interest this week. Values are unchanged, but remain very firm. Canadian tanners are not anxious buyers at present quotations, and allege the present low basis of the leather market as a cause for confining their purchases within narrow limits. There are, however, no accumulations in the hide cellars of Toronto, and it is believed that other Ontario centres are in no better position. There is an active enquiry for hides from the United States. Cured buff hides are quoted at 8½c. in this market. For green calfskins butchers are paying 10c. for No. 1, and 8c. for No. 2. The Chicago *Review*, June 26th, says: "Fully 100,000 packer hides have been sold this week from Chicago and the branch packing houses further west. A few spring native steers remain on hand, but all other kinds are closely sold up. There has been considerable trading in country hides, and the advance prices have been freely paid. All stock are well cleaned up, and offers at to-day's prices are being refused on account of scarcity and anticipation of better prices. Buffs and 2's have found ready sales at ¼c. advance." The local tallow market is somewhat firmer, but prices are unaltered.

PROVISIONS.—Active trading in pork products has been continued this week. Long clear bacon is firm at 7½c.; rolls are firmer, with 8½c. quoted. For smoked shoulders there has been good enquiry, with 8c. asked. Heavy meats are in light supply. Lard is dull at 6 to 6½c. Hams are firm, but without change in price.

WOOL.—The activity reported in the Ontario fleece wool market last week is over. Supplies held here have been shipped to the United States, and if expectations are realized as to the course of Congressional tariff legislation, the export season for the year is closed. It is impossible, however, to predict as to the future in this respect. As predicted in our last report, there has been a serious decline in the price of wool. Dealers are now paying the following prices: Good merchantable fleece, 17c.; rejects, 15c., and unwashed wool, 11c. per lb. The London wool market business has been quiet since the close of the last auction, and although a good enquiry has prevailed small parcels only have changed hands. Prices have been well maintained, however, and fully up to the prices then ruling.

MONTREAL MARKETS.

MONTREAL, 30th June, 1897.

ASHES.—Receipts are very light at the moment, but the demand is even lighter, and dealers are very indifferent buyers. Quotations are, if anything, easier at $3 to 3.05 for first quality of pots; $2.75 to 2.80 for seconds; pearls about $4.25 per cental.

CEMENTS AND FIREBRICKS.—Fair deliveries are being made of cement on account of Government contracts, but the actually new business being done is moderate, large transactions being the exception, but a fair aggregate of small orders. Prices have been subject to no variation since the opening of the season. Firebricks are rather dull at $15 to 21 per thousand as to brand.

DAIRY PRODUCTS.—The shipments of cheese continue to show a steady gain on the figures of 1896, big a year as it was. Last week's exports were 78,499 boxes, which is nearly 10,300 boxes ahead of the same week last year, London took 33,000 boxes, Bristol 18,500 boxes, Liverpool 13,000 boxes, Glasgow 8,500, and small lots to Manchester and Leith. Butter shipments are also more active, 7,250 packages having been exported last week, as against only 2,004 same week of last year, and in this latter line values are a little firmer at 17 to 17½c. per lb. for choice creamery; Townships dairy, 14 to 15c.; Western, ditto, 12 to 13c. For cheese the present quotations are 8¼ to 8½c. for Western, and 8 to 8¼c. for Quebec. Eggs are in lighter supply and higher at 10½ to 11c. per dozen for choice stock.

DRY GOODS.—City retail men seem rather better satisfied with business results of late, and several leading houses report payments from this source as coming in very fairly. There is still a pretty good sorting business being done with both city and country, and orders for the fall are beginning to come in fairly well, in the experience of some of the larger houses, though in other cases travellers have just left with full ranges of fall samples. With regard to values, there is really nothing new.

GROCERIES.—Taking it as a whole, the distribution of goods in this line is a little more active, though orders are mainly confined to small amounts. The enquiry for sugars i slowly getting better with the advancing season, but refiners' stocks are still pretty full. The supplies of yellows in outside hands is now about exhausted, but there still appears to be some granulated left, and the Canada refinery shut down about a week ago, to allow accumulation of stock to run off, and the St. Lawrence Company are only running partial capacity, and on yellows principally. The reduction of an eighth of a cent just made as we were writing last week, is confirmed, and was made principally to choke off possible orders for foreign made sugars. Quotations are 4c. for granulated at factory; yellows, 3¼ to 3⅝c. per lb. Receipts of molasses are liberal, with prices easy and a good deal going into store. The rice milling company expects some supplies of paddy in the course of a month or so, and will start up the mill again, with the view of seeing what they can do under the new tariff; jobbing prices remain exactly as established last March. Teas are quite dull at the moment; some moderate quantity of new fine grade Japans are to hand, and are being jobbed at 27 to 28c. Third and fourth steamers, now on their way to the Pacific coast, have considerable quantities of cheaper grades for this market. The Americans have given up buying, and the market in Japan is quite easier, and now not much above the level of this time last year. The London market presents no interesting features in Ceylons or China teas. Canned salmon is being offered on the Pacific coast at prices lower than last year; a fair quantity of orders have been booked for Montreal, at $3.65 to 3.75 for standard brands; but some are holding back in the hope of lower figures.

HIDES.—There is no special feature in the hide market here, beyond the fact that the company has shipped all its accumulation of hides and calfskins to the United States, to be held there till the matter of duty be settled, the expectation being that the 20 per cent. duty—instead of the 1½c. per lb. as at first proposed—will really go into effect. Dealers are paying 8c. per lb. for No. 1 beef hides, green; 8 and 6c. per lb. for calfskins, and 90c. to $1 each for the few sheepskins now coming in. Lambskins are advanced to 25c. each.

LEATHER.—We hear of nothing interesting in this line. Boot and shoe manufacturers con-

Gold Medals, Paris, 1878 : 1889.

tinue to be very indifferent buyers, and the amount of business passing is really small. Considering the slow demand, values continue to be very steadily held. We quote :—Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c ; Scotch grained, 30 to 35c.; western splits, 20 to 22c.; Quebec do., 15 to 17c.; juniors, 14 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c ; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

Metals and Hardware.—Since last writing we hear of a further sale of Hamilton iron at $16, also of a small sale of Summerlee at $17, but beyond this business in pig iron has been dull. Bar iron continues easy, at $1.30 to 1.35 for domestic. Some moderate sales of Canada plates are reported at $2.15, and a 200-box lot at $2.10; supplies of these goods are not very liberal as yet, and of black sheets there is still no assortment, some gauges being in very short supply. Ingot copper is easier, a round lot being offered the other day at 11½c. Ingot tin is fomewhat firmer. We quote: — Summerlee pig iron, $17 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16.50; No. 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $17.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2 15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates —Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D.Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, 6c.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1.50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 30 to 3.40; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 17c. for L. & F.; Straits, 15½c.; bar tin, 16 to 16½c; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.60 to 4.75; antimony, 8½ to 9c.

Paints, Oils and Glass.—The movement in these lines is now a comparatively light one, and little change is to be noted in prices. Charleroi quotations for fall orders for glass are easier by 2½ to 5 per cent., but local quotations are very firmly held. We quote :—Turpentine, one to four brls., 42c.; five to nine barrels., 41c., net 30 days. Linseed oil, raw, one to four brls., 42c.; five to nine brls, 41c.; boiled, one to four barrels, 45c.; five to nine brls., 44c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½; No. 2, $4.25; No. 3, $3.87½; No. 4, $3.50; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4¼c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 13½c. in bulk; packages, 14½c.. window glass, $1.25 per 50 feet for first break; $1.35 for second break; third break, $2.80.

Wool.—Business on spot continues very dull and slow. Very little of the new crop has been offered in this market, and manufacturers are very light buyers. We quote :—Greasy Cape, 14 to 16½c.; B.A. scoured, 30 to 33c.; domestic fleece, 21 to 23c.; ditto pulled, 20 to 22c.

TEN DOLLARS A MINUTE!

This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the

METROPOLITAN
Life Insurance Co. of New York

Assets, ... $25,592,003.78

The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.

Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE

5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.

CLAIMS paid immediately at death.
No initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.

Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object heing to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,

BUSINESS IN THE UNITED STATES.

In their New York letter of Saturday last, Henry Clews & Co. say that the marked improvement in the tone of the securities market that set in with the beginning of this month continues to be well sustained. It has spread quite generally throughout the list and goes on steadily from day to day without any important check from selling and with little disposition to realize profits. One significant feature of the market is the moderation of the amount of transactions as compared with the buoyancy of prices.

It is a generally understood fact that the business feeling in the interior has reached a more advanced stage in the process of recovery than is the case at this centre; and it is owing to this fact that outside operators have got into the market in advance of our local operators.

The current buying orders from the interior come largely from those whose positions make them familiar with the current business and the prospects of the railroad, and who are imbued with the confident expectation of a revival of business which has been so confidently foreshadowed by many prominent railroad officials.

An unmistakable evidence of the improvement in business is afforded by the increasing demand upon the local banks for discounts. Last Saturday's statement of the Associated Banks showed an increase in loans of $13,000,000 within the last four weeks; the gain being materially due to operations on interior account; which again shows the expansion of trade in other sections to which I have already made reference. Country merchants arriving here express surprise at the absence of the buoyancy of business which has set in among their own people.

The great spectacular event of Queen Victoria's Jubilee has not been without its effect upon the practical imagination of Wall street. The population of this country has grown up to probably in the neighborhood of 73,000,000, which is about double what it was at the termination of the war—thirty-two years ago—thus showing that this is a pretty progressive country—but there are others. Let us see how the above statement compares with the increase in the British Empire. At the commencement of the Queen's reign in 1837 the number of her subjects was 127,500,000. After sixty years' prosperous reign (which has been celebrated so grandly in London) her subjects now number 353,500,000; and this great and good woman is now Queen and Empress over one-fourth of the populated globe. This exhibit makes the strongest argument possible in favor of the International Arbitration Treaty between this country and Great Britain.

MANITOBA CROP AREA.

A despatch from Winnipeg last week stated that the crop bulletin of the Department of Agriculture, shortly to be issued, will show the area under wheat in the province to be 1,290,882 acres; of oats, 468,141 acres, and of barley, 153,866 acres. The total area of all crops is 1,950,000 acres, an increase of 30 per cent. over last year. The total area last year was 999,588 acres. After deducting 50 per cent. of the area sown on stubble, which proved to be wasted effort, the figures for the three preceding years of the principal cereals are as follows: Wheat—1894, 1,010,086 acres; 1895, 1,140,276; 1896, 999,588. Oats—1894, 413,686; 1895, 482,658; 1896, 442,445. Barley—1894, 119,528; 1895, 153,839; 1896, 127,885. There are 27,000 farmers in the province, and the figures indicate that the old settlers are cropping as much land as ever, although going more extensively into stock raising, etc.

—The longest time during which a Bank of England note has remained uncashed is 111 years. The note in question was for $125, and it is computed that the compound interest gained by the bank, owing to its non-presentation, amounted to no less than $30,000.

—A correspondent from Fifteen Mile Stream writes to the *Chronicle*, in reference to returns of the New Egerton Gold Co., of Nova Scotia, as follows:—"The returns from the New Egerton Gold Co.'s mine during the past three months aggregated 790 ozs., and for the past two years 6,270 ozs." Thus the earnings for three months were $15,800, and for two years $125,400.

THIRTY-EIGHT MILES AN HOUR.

A little steam vessel, built in England, and named the "Turbinia," has been giving an extraordinary exhibition of speed. She attained the great registered speed of "38 miles an hour" over a rough course. This is astonishing, but hardly more so than the novelty of the method of propulsion, the lightness of the machinery, the absence of vibration. At a recent meeting of the shipbuilding section of the Institute of Civil Engineers in London, Mr. Thornycroft, well known in connection with water tube boilers, congratulated the Hon. Charles Algernon Parsons, the designer of the "Turbinia," upon her wonderful record, and at the same time he pointed out reasons why the very extraordinary speed attained, as compared with the torpedo-boat destroyers—heretofore the speediest boats constructed—was more remarkable even than appeared at first sight Prof. Ewing, of Cambridge, who spent a week upon the vessel and made many tests and experiments in regard to speed, water and fuel consumption, etc., gave some very interesting information. The absence of complicated machinery (there being no reciprocating parts as in ordinary engines) made the duty of the engineer very easy. "In fact," he says, "there was nothing but a steam stop valve and a reversing valve that had to be handled." In 20 seconds after starting from a state of rest, the steam turbine engines were working at a rate equivalent to a speed of 28 knots.

When asked about vibration the Professor replied that it did not exist—"he did not mean a comparative quietude; but the phrase should be understood in its literal sense. Even at the highest speeds there was no vibration nothing more than hum from the fan, which was driven directly from the central propeller shaft." The Professor said that he had gone into this investigation with a certain degree of skepticism; but that the trials had been entirely successful throughout, and he could now point to nothing that would form a set-off against the obvious advantages which were possessed by the turbine as a marine motor. All this indicates that an important departure has been made in the method of propulsion of steam vessels.

In conclusion, it may be explained that the "Turbinia" is not propelled by ejecting streams of water from her stern as some one described not long ago; but steam is projected with great force against the blades of a steam turbine wheel somewhat resembling an ordinary electric fan inclosed in a tight case. This wheel rotates with great speed, and is attached directly to the shaft which drives the propeller. There are actually three turbines coupled to three shafts. The absence of vibration is presumably due, in part at least, to the fact that there are no reciprocating movements as in an ordinary engine, but a continuous rotation in one direction only, except when going astern.

AMERICAN OPINION ON THE JUBILEE.

When even the correspondent of the New York *Sun*, that newspaper which is the bitter foe of everything British, is so impressed by what he saw abroad with the greatness of the British Empire, and the vastness of its influence, that he forgets to abuse "England," it may be reasonably expected that other American papers would find something even more friendly to say. A fortnight ago, the New York *Tribune* had a column editorial headed "The Golden Age," and this was part of it:

"This longest reign in British history is also the most glorious. Others have been more sensational. Not one has seen so great progress made in the expansion of the Empire, in political development, in the industrial, social, intellectual and spiritual advancement of the people.

"The statement is a sweeping one, but it is warranted by the record. Space is given elsewhere in to-day's *Tribune* to reviews of some of the salient features of British history for the last sixty years, especially to territorial growth, political evolution and the march of science. These are necessarily brief and suggestive rather than exhaustive, but perusal of them is sufficient to bring conviction that the Victorian reign has been pre-eminently the golden age of British history. An Empire on which literally the sun never sets, and which contains one-fifth of the population and one-fifth of the land area of the world, is a majestic fact, unprecedented and unapproachable.

"The progress of a great people, calm and conservative, from a scarcely constitutional monarchy to advanced republicanism in less than two generations, without a revolution or any sudden upheaval, but with the smoothness and continuity of the procession of the equinoxes, is one of the most impressive spectacles in human annals. A nation war like on occasion and aggressive at all times, the world's past master in manufacturing and shop keeping, in commerce and finance, yet above these material things attaining the foremost rank in science and literature, and a creditable standing in fine arts and all social culture, is a combination of the useful and the beautiful approximating to the highest known attainments of human genius. . . . There is, indeed, not one beneficent sphere of human action in which its record is not nobly made. It has been an era worthy of the great Anglo-Saxon race at its best estate and worthy of commanding prominence in the now closing cycle, which succeeding generations the world over, 'far on in summers that we shall not see,' will mark in glowing annals as the best in all these sixty centuries of recorded time."

And in another issue, this week, commenting editorially on the statement recently made by the London *Standard* that "As far as the Americans are concerned, we believe they are almost as pleased and proud as though the Jubilee were their own," the *Tribune* says: "That is a strong saying, but not an injudicious one. It may well be believed to be entirely true. Popular interest in the Jubilee in the United States had been unprecedented. It has prevailed in all parts of the country and among 'all sorts and conditions of men.' It has been so uniformly and unequivocally friendly that such few exceptions as there have been have served merely to emphasize its general character. For this no special merit is to be claimed. It is entirely natural. Nor is it a fact contrasting with the British attitude toward America. For obvious and sufficient reasons, British affection toward America is not so strong as American toward Great Britain. Yet it is strong, and has often been made manifest in a most gratifying manner; and we doubt not that to-day, if the conditions were reversed, the British would, to paraphrase the *Standard's* words, be almost as pleased and proud over our Jubilee as though it were their own. For these two great branches of the Anglo-Saxon, or English-speaking race, are bound together by ties no man or any vicissitudes of human experience can sever. It is easy to talk of George III. and the wrongs his Government inflicted upon the thirteen colonies. Those things belong to history. But history does not shape present life, nor control living hearts. The story of a Waterloo does not hold Great Britain and France apart, nor that of the Crimea unite them. Sadowa and Venetia did not prevent the Triple Alliance.

"Yes; Americans are pleased and proud at the Jubilee of the Queen, who has always been their friend—who, just twenty years ago last week, received their great general and ex-President at Windsor, with a cordiality kings and emperors might vainly covet—and of the great Empire of which their own republic is an offshoot. In that they are guilty of no lack of patriotism, no failure of republicanism or true Americanism. He would be a narrow-minded Briton who, seeing the greatness of America, did not feel a thrill of pride in saying: 'That is the nation which we Britons planted.' Equally narrow and ungracious would be the American, who, surveying the splendors of the Victorian realm, should feel no answering thrill of pride in saying: 'That is the Empire, that the stock from which we Yankees sprang.' So far as this Jubilee commemorates the personal achievements of the Queen and the individual attainments of the British Empire, Americans regard it with the pleasurable sympathy due to a friendly sovereign and a friendly power. So far as it sets forth the might and majesty, and foreshadows the auspicious and resplendent destiny of the common race, they rejoice and exult in it as though it were—as, indeed, in that commanding sense it is—their own."

—Very pious individual inquires as follows: "My good man, do you ever do anything to bring light and purity into the homes of your fellow-men?"

"Yuss—lots."

"I presume you distribute tracts?"

"No, no, I cleans windows and beats carpets.'

50 YEARS The Year 1897 is the **SEMI-CENTENNIAL**

OF THE

Canada Life Assurance Company.

Count Not The Cost

Of keeping in force an Investment Policy of insurance, as, whether the insured lives to the completion of the investment period or not, the amount payable to him if he survives the period selected, or to his beneficiary, if his death occurs prior thereto, is a large return for the amount invested.

The Compound Investment Policy
ISSUED BY THE
North American
Life Assurance Co.

Toronto, Ont., is a very attractive, liberal and remunerative form of insurance. **It specially provides** for the **loan** to the insured, if desired, of all premiums beyond the 10th, and should death occur thereafter, the full amount of the policy becomes payable, premiums loans, if any, being cancelled. **It further provides** for the **return** of the 11th and subsequent premiums, together with the full face of the policy, should death occur after the 1 th year and within the investment period selected. Pamphlets explanatory of this advantageous form of investment insurance, and copies of the last annual report of the Company, furnished on application to

DECISIONS IN COMMERCIAL LAW.

Dill v. Dominion Bank.—In an action to recover monies alleged to have been deposited with the defendants, a banking corporation, at a branch, the plaintiff examined for discovery, as officers, the persons who were respectively manager and ledger-keeper at the branch, at the time the alleged deposits were made. He then sought to examine the general manager. A Divisional Court decided that the plaintiff had the right to examine the general manager as an officer of the corporation, and the regular means of procuring his attendance having been taken, there was no excuse for his non-attendance.

Fraser v. Ryan.—The plaintiff on the 18th of February, 1895, agreed to sell to the defendant a timber limit for $115,000, payable $500 in cash, $500 in ten days, secured by a promissory note, and the balance in thirty days. The $500 cash was paid and the note given, but it was not paid at maturity, nor was the $114,000 paid when due On the 2nd of May, 1895, the plaintiff wrote to the defendant rescinding the contract on account of the non-payment of the purchase money. The defendant afterwards paid $100 on the $500 note, and gave a new note for $400. In an action brought upon the new note, the defendant contended that, although he had forfeited the $500 paid in cash, he should not forfeit the second $500; but that it was in the same position as the $114,000, and could not be recovered after the rescission of the contract. The Court of Appeal decided that the contract had been ended by the mutual action of the parties, and the law left them where they had put themselves. Whatever money had passed from one to the other could not be recovered, nor could the note be recovered from the hands of the vendor, nor could he sue upon it to recover the amount of it from the purchaser. The contract was at an end, and all rights thereunder, and remedies thereon ended therewith, except that damages for the breach of it might be sought by the vendor. The doctrine applicable to "deposits" did not apply to this subsequent payment, which was not part of the deposit.

Lambe v. Armstrong.—Part of lands seized by the sheriff had been withdrawn before sale, but on proceedings for *folle enchere*, it was ordered that the property described in the proces-verbal of seizure should be resold, no reference being made to the part withdrawn. On appeal, the Court of Queen's Bench in Quebec reversed the order, on the ground that it directed a re-sale of property which had not been sold, and further because an apparently regular sheriff's deed of lands actually sold had been duly registered, and had not been annulled by the order for re-sale, or prior to the proceedings for *folle enchere*. The Supreme Court of Canada decided that the Court of Queen's Bench should not have set aside the order, but should have reformed it by rectifying the order. Where a sheriff's deed has issued improperly and without authority, it must be treated as an absolute nullity, notwithstanding that it has been registered, and may appear upon its face to have been regularly issued, and in such a case it is not necessary to have it annulled upon taking proceedings for *folle enchere*.

The statement of customs revenue at St. John, N.B., for the month of June, 1897, as compared with the corresponding month of the previous year, shows a decline of $8,408, being $49,579, as compared with $57,988 during the same month the previous year.

Mercantile Summary.

JOSEPH FORTIER, manufacturing stationer, Montreal, has been unable to carry through his settlement at 10 cents, and has assigned to the court.

A. P. BEAUDETTE began on small capital in 1894, buying the insolvent stock of Jean Plamondon, hardware dealer. He is now reported failed.

THE electors of Listowel are asked to vote on July 27th for a by-law to raise the sum of $15,000 for the purpose of acquiring and constructing a system of waterworks.

J. B. SNIDER, of Waterloo, has made a shipment of three carloads of church furniture to South Africa. The goods were purchased by the Dutch Reform Church, at Woodstock, Cape Colony.

IN Magog, Que., two by-laws authorizing the council to borrow $10,000 for electric lighting, and $13,000 to consolidate the municipal debt, were ratified last week by the votes of a majority of the ratepayers.

COMPARING the fiscal year 1896-7 with the previous one, there is very little difference in the amount of customs collections at Montreal. In the year ended 30th June last the receipts from duties were $6,765,771 at that port, and in the preceding twelve months they had been $6,770,782.

A FREIGHT steamer 470 feet long and 56 feet beam is building in Belfast for the Allans. The same company has purchased three steamers of 6,000 tons each, the "Ludgate Hill, "Tower Hill," and "Richmond Hill," which have been employed in the New York freight trade. They will be continued on their former route.

SOMEBODY has a notion that there is a coal vein near the summer hotel at Penetanguishene, Ont. American visitors have been looking into the matter, with the result that work is going on at a shaft near the town. It is believed the vein runs under the bay, and "they expect to find coal at a depth of 150 feet." Let us hope they may!

FOR a long time past Clouthier Freres, general merchants at St. Jacques L'Achigan, Que., have been looked upon as a well-established firm in very fair circumstances. Their father had long been in business before them, and when he died in 1883 left a good estate. They have, however, unexpectedly assigned to the court.

PAUL PROZESKY, Montreal, cigar maker, having been sued of late, has fyled consent to assign, and puts his indebtedness at $3,274.——Louis Favreau, a machinist in a small way, has assigned; liabilities, $1,500.——J. T. Gariepy, for twenty years past doing a modest carriage-making business at Montreal, has been obliged to assign.

MR. M. J. HANEY, C.E., manager of construction of the Crow's Nest Pass Railway for the C.P.R., left last week for Montreal and Toronto, thence this week for MacLeod, N.W.T., which place he expects to reach about the 10th inst. Mr. Haney has called for tenders for the construction of the first 100 miles of the road west of Lethbridge.

JOSEPH BERNSTEIN, heretofore a clothier with a good name, and who has done business in London and Kingston, but latterly in Montreal, is reported an absentee, and proceedings in insolvency have been instituted. He has recently been attempting a manufacturing and jobbing business in a small way, and it is thought has thus become involved. Liabilities are put at about $7,500.

THE city of St. Hyacinthe has appropriated $40,000 for improving their water works, a by-law having been passed for that amount. The Holly system is in use. A new pumping station is to be built above the old one, and just outside the city limits. A high duty pump, with a capacity of 2,000,000 gallons for 24 hours, and a cistern of pressure filters, will be put in. St. Hyacinthe bought the system from the old company about two years ago for $130,000 cash.

WE note a little group of grocery failures in Montreal: James O'Shaughnessy has assigned on demand, and shows liabilities of $5,040.——Barsalou & Co. have been asked to assign. Mr. B. has only been in business here a short time, but failed last fall.——Cyrille Verdon, a small suburban dealer, has assigned, owing about $800.——E. Bergeron & Frere, a young firm, are reported to be preparing a statement to lay before their creditors. They owe about $3,000.

IT is understood that Messrs. McKenzie & Mann have secured the contract for building 80 miles of the Rainy River Railway from the end of the Port Arthur, Winnipeg and Duluth line, over which perpetual running powers have been secured But a Winnipeg paper says that the same contractors have been notified by Premier Greenway not to proceed further with construction work on the Lake Dauphin line extension.

HERE following we note a few recent Nova Scotia failures. J. A. Hirtle, who went from Lunenburg to Halifax a few years ago to do business as a building contractor, is reported in trouble, and a meeting of his creditors is called.——Fred. Johns, a small trader at Springhill, has assigned.——R. E. Sweet, who has had a general store and supply business at the Forrest Hill Mines, Country Harbor, is trying to make an arrangement at 25 cents on the dollar, cash. The liabilities are put at $9,810, of which about $1,000 is preferred.

MORAL—Insure your stock for a reasonable amount. J. M. Sirois, general merchant at Cacouna, Que., was unfortunate in being burned out last month, loss being estimated at $6,500, and insurance only $2,000, on which he had to accept a compromise. He owes $4,300, and thinks he can pay 40 cents in the dollar out of his insurance and book debts ——H. Blanchette, for the past dozen years in general business at Actonvale, Que., but who has recently removed to Val Racine, has assigned, and is said to owe $5,000. —Joseph H. Bredon, who has been in trade at Marbleton, Que., for over twoscore years without previous disaster, has been obliged to assign, and shows assets of about $2,000 to pay liabilities of $2,700

WHO shall say that the modern farm economist of Essex County, Ontario, is not fruitful in ideas when he proposes to utilize the highway fences as trellises for grapes? According to the Detroit *Evening News*, an effort is being made by the Detroit, Windsor, Amherstburg and Western Ontario Cycle Path Association to raise funds for a cinder path that will make a circuit of the whole Western corner of the peninsula of Ontario. "In connection with this scheme, a move will be made to interest the farmers in the suggestion made by J. W. Drake a year ago, to raise vines on the wire fences along the road. Mr. Drake figures that every farmer would make a handsome profit, besides improving the appearance of the landscape." The *News* adds, however, that "the farmers seem very conservative, and not inclined to go into a new venture," and the Amherstburg *Echo*, which copies the item, does not hazard an opinion to the contrary.

IF YOU

Are in need of a Gas Range ....

It will be to YOUR OWN INTERESTS to Investigate.

THE OXFORD

has more pointsof merit than any other range in the market.

THE BODY
is made of the best heavy cold rolled steel plate, japanned inside and out and lined with asbestos millboard, thus preventing rusting and radiation of heat.

THE OVEN BURNERS
are fitted with an instantaneous lighter, which can always be relied upon.

THE TOP BURNERS
are so constructed that they obtain the greatest number of heat units from a minimum consumption of gas.

Manufactured by

The Gurney Foundry Co., Limited
TORONTO

The Gurney-Massey Co., Limited
MONTREAL.

Mercantile Summary.

THE receipts of last month were the heaviest in the history of the Montreal Street Railway. The earnings amounted to $130,676.77, an increase of $14,248.11 over June, 1896.

THE saw mills near Shediac are running night and day. Irving's mill at Buctouche is also to run night and day. There is wonderful activity in the lumber trade all along that shore.—*St. John, N.B., Sun.*

FOR the month of June duties collected in Montreal show a decrease of $73,969. According to the official statement, the duties amounted to $481,232, against $555,202 for the corresponding month last year.

THE New Brunswick telephone line is being extended from Fredericton to Woodstock. This when finished will complete the connection of the Carleton and Aroostook towns with Fredericton, St. John, Sussex, Moncton and intermediate towns.

THE governor and committee of the Hudson's Bay Company in London have recommended a dividend of 13s. per share for the past year, carrying forward £21,199. This dividend paid last year was at the same rate, and £26,082 was carried forward.

THE Gloucester papers are demanding that Uncle Sam should send a cruiser to Nova Scotia and Cape Breton to look after the interests of the United States fishing vessels, and to protect them from illegal seizure by the Canadian fisheries protection service.

THIS is a time of peace, but the defences of Halifax harbor are to be strengthened. It is stated that a powerful electric searchlight will be placed in the fort at York redoubt, at the entrance to the harbor, and a new battery for quick-firing guns built at Point Pleasant, making four batteries within gunshot of each other, though hidden in the woods of the public park. The searchlight at York redoubt would be capable of sweeping the open ocean for miles in clear weather.

THE Canadian Pacific Railway Company announce a new grain tariff, to take effect July 12, on bulk grain in cargo lots from Fort William, *via* Owen Sound: To Peterboro and Canadian Pacific stations on main and branch lines west to Windsor, inclusive, 11⅔ cents per 100 pounds. East of Peterboro, to Ottawa, Montreal, and intermediate and branch line stations, 13⅓ cents. The Montreal rate will not apply to stations north of Carleton Junction, nor to stations on the Ottawa River section, between Montreal and Ottawa.

LONDON has now twenty-six miles of street railway, says the *Advertiser*—fifteen of which is double track. The street railway represents a large financial outlay in the city, from which its revenue is derived. The capitalization is about $650,000, and about $36,000 is paid out in wages alone every year. The company use 5,000 tons of coal a year. On the regular pay roll there are 125 men, who are given, including the construction corps, employment. But this summer there have been from 250 to 300 men constantly at work.

THE retail wall-paper dealers of Canada and the United States assembled in convention at Niagara Falls, N.Y., on June 30th, and organized the American Association of Wall Paper Makers, with Mr. C. W. Page, of Rochester, N.Y., as president. A board of directors, numbering twenty-four, was elected. The Canadian representatives on the board are Messrs. A. Mullen, Toronto; J. Murphy, Montreal, and R. A. Robertson, Hamilton. The association expects to bring within its fold all of the retail wall-paper dealers in both countries, and commissioners were appointed to visit all cities, towns and villages with this end in view The association will meet again in June next year at the same place.

THERE is an interesting freight war, says the London *Advertiser*, July 6th, in the Galt district The Galt Electric railway, running to Preston, Hespeler and other points, works in conjunction with the C.P.R. for the delivery of freight at those places, which the electric railway touches, and which the C.P.R. does not. The Grand Trunk covers these points by its line from Harrisburg to Guelph, but asked from the Galt electric railway the same privileges as the latter afforded the C.P.R, offering to pay the same amount as its competitor. The electric railway company refused to grant the privileges except on certain conditions, which were not satisfactory to the G T.R, which at once put freight wagons on the electric railway route, and delivered their goods free. In retaliation, the C.P.R. and the electric railway company are now arranging for the free delivery of goods by wagons at the points in the district touched by the G.T.R, which the former two lines do not touch.

SINCE the recent agitation caused by Canadian wheelmen at Ottawa, a short while ago, for the free carriage of bicycles on railway trains, steps have been taken to lessen the rates. It will be gratifying to travellers and others using bicycles to know that some changes have been made which will tend to reduce the cost. Following is the new scale of charges:

When lowest first-class passenger fare is

From	To	Charge
$ c.	$ c.	$ c.
......	under 10	05
10	75	10
80	1 50	15
1 55	3 00	20
3 05	5 00	25
5 05	7 50	30
7 55	10 00	40
10 55	12 50	50
12 55	15 00	60
15 05	17 50	70
17 55	20 00	80
20 05	22 50	90
22 50	25 00	1 00
25 00	over	4 per cent. of passenger fare.

THE statements of earnings of the two big railways last week were very satisfactory, showing, as they do, a total increase of $129,790 over the same week last year. The Canadian Pacific Railway system earned $91,000 more from June 21st to June 30th, than in the corresponding week of 1896, whilst the increment in the receipts of the Grand Trunk was $38,790. The detailed figures follow:

Grand Trunk:	
1897	$491,627
1896	452,837
Increase	$38,790
Canadian Pacific:	
1897	$602,000
1896	511,000
Increase	$91,000

THE annual report of the Quebec Central Railway shows a very encouraging year's business. The receipts for the year amounted to $397,106, as compared with $44,764 for the preceding year, an increase of $52,342. The net receipts were $128,311, an increase of $15,877. At the beginning of last year the company had successfully floated an issue of debentures to the amount of $250,000, for work on the Tring branch. For the five months since the 1st of January to the 31st of May last, the gross receipts exceeded those of a year ago by $28,514.

Mercantile Summary.

THE stock of sugar at the four ports in the United Kingdom is 95,000 tons, against 135,000 tons this time a year ago.

AMERICAN tourist travel is beginning to pour into St. John. Two steamers brought large contingents from Boston on Monday and Tuesday, and all the incoming trains are crowded. The weather was reasonably cool.

A VANCOUVER despatch of Tuesday last says that sixty tons of butter have arrived there from New York and will be forwarded to Sydney by the "Warrimoo." This is the first shipment of American butter to Australia.

LOVELL'S Montreal directory for 1897-98 is out. More than 4,000 names of citizens have been added this year, and the total number of names in it this year, not including those found in the outskirts, is, by actual count, 71,933.

THE funeral took place in Hamilton, on Wednesday, of Mr. John Weatherston, a well known railwayman and contractor, who lived to a great age. Deceased was the father of Mr. N. Weatherston of the Intercolonial Railway.

ADVICES of Monday last from the south of France add to the gravity of the disasters due to the floods there. The number of houses and farms destroyed is incalculable. The losses are estimated at 200,000,000 francs. Hardly a village has escaped damage, and the number of victims who lost their lives is quite 300.

THE third dividend declared from the estate of the failed Banque du Peuple is being paid. It amounts to about $215,000. It is said that over $14,000 was paid to the depositors of the bank on Friday last, and about $8,000 on Saturday. This $215,000 is one-fifth of the amount due in May last, and equal to one-tenth of the amount originally due. When this dividend is all paid out, the total amount paid to date will be 55 cents on the dollar.

LAST March, Sicklesteele & Sons bought at the rate of 72 cents on the dollar, the stock of boots and shoes that had been owned by Hamilton Bros., of Stratford. They paid $2,500 cash and gave notes for the balance. The business was an old-established one, and there seemed to be a reasonable hope that the new owners would find their investment a profitable one, but such evidently is not the case, for they have assigned.

THE Merchants' Association of the City of New York is pushing with vigor its plan of making it easy and profitable for country merchants to visit that city as buyers of goods. It has secured from the railroads special commercial excursion rates for this fall only. This will necessitate constant work for the next four or five weeks among 125,000 merchants and buyers from all over the United States, who will be invited to come during the proposed excursions and to bring their families with them.

IT is provided by the new regulations in regard to slack coal that consignments containing coal larger than will pass through a three-quarter inch screen will not be entitled to the 20 per cent. duty. In order to avoid screening, 80 per cent. of the consignment will be charged at 20 per cent. duty, and the 20 per cent. balance of the coal at the rate of duty on round bituminous coal. The 20 per. cent. duty is limited to what will pass through a half-inch screen. Mr. Fielding reduced the coal duty to 53 cents, as the United States had reduced the duty from 75 cents to 60 cents. Now the United States has again raised the duty to 67 cents.

Mercantile Summary.

Samples of new season's Japan teas, consisting of "Moon," "Crescent," "Teahouse," and "Sailor Boy" brands, have just been received by Messrs. Perkins, Ince & Co., Toronto.

The annual meeting of the directors of the Taylor Hydraulic Air Compressing Company, Montreal, was held at their office, June 25, at which the following directors for the ensuing year were elected: Messrs. S Carsley, Joseph R. Fair, George Durnford, W. L. Campbell, and R. L. Murchison.

A new statute in Connecticut makes it unlawful for officers of public records, State, municipal or court, to use any ink in making public records not approved by the Secretary of State. This is based upon the fact that from using poor ink in past years some important records are now nearly illegible. They should use Arnold's ink.

In an article on the subject of silver in China and its relation to Chinese copper coinage, published by the American Academy Pol. and Soc. Sci., Mr. Tallcott Williams shows that the relative value of gold and silver has exhibited in China the same steady and regular depreciation of silver as measured in gold, as in the western world, with the difference that the change from 4 of silver to 1 of gold, to 15 and then to 30 of silver to 1 of gold, which has taken thirty centuries in the west, has taken but five in China.

We note the death of Mr. Amor de Cosmos, who formed the first administration of British Columbia, after she came into the Dominion. His real name was not De Cosmos, an Act of Parliament having bestowed that name upon him, but Smith. He went to California shortly after the gold craze of 1849. In 1858 he settled in British Columbia, where he has since resided. He owned and edited the *British Columbia Press*, and afterwards the *Daily Standard*. The deceased was 72 years of age.

If Latham & Pominville, of Windsor, hadn't opened in Detroit a branch of their tailoring and men's furnishings establishment in the early part of 1896, they might not have had to make an assignment the other day. When they first opened at Windsor their stock and capital was small, but by push and energy it gradually increased until they took it in their heads to go across the river, since which time things have not gone so smoothly. A few weeks ago they chattel mortgaged everything, and later on some anxious creditors issued writs, so they made an assignment.

Word comes from Moncton that the Dominion Department of Agriculture has arranged a cold storage service on different roads eastward, similar to that western service we described the other week. This, with the Intercolonial, will provide a weekly car between Rimouski and Quebec, Moncton and Halifax, and Moncton and St. John. The cars are to be labelled, "Government cold storage line," and painted white, so as to attract the attention of farmers and other shippers of perishable goods. These articles are to be picked up at all stations, and carried at the ordinary rates of freight. Announcement of dates, etc., will be made later.

The insolvent estate of the Citizen's Telephone Exchange, Waterloo, Que., was sold by the curator, Mr. R. R. Burrage, of Sherbrooke, last Tuesday. The total amount realized was $3,060. The telephone outfit, wires, instruments, poles, leases, etc., and the book debts were knocked down to Pare & Pare, of Granby. The price was $2,850. The only other bidders were Messrs. H. B. Brown, Q.C., of Sherbrooke, and C. E. Harvey, Waterloo. Mr. Pare announces his intention of at once putting the line in first-class shape, and running it in connection with his own system.

The editor and publisher of *Munsey's Magazine* has entered the field of book publishers by bringing out a first edition of 10,000 copies of a story entitled "A Princess and a Woman," written by Robert McDonald. The venture is remarkable for the fact that this first book while printed on fine, heavy paper, and bound in cloth, will be sold to the reader for 25 cents. This revolution in prices of books," says the *Literary News*, "is an outgrowth of the reduction in the cost of magazines, which was brought about, we believe, by Mr. Munsey, and has been followed successfully by several periodicals other than his."

There is a good-sized strike on the Nassau-Peterborough section of the Trent Valley canal, says the Peterboro *Review*, and some seventy teams and over two hundred men are off the work. The demand of the men is for better wages. They have been receiving $1 per day for laboring men, and $2 25 per day for a man and his team. There seems to have been more or less dissatisfaction among the men on this section of the canal, and "the straw that broke the camel's back," the cause of the men deciding on action yesterday, was the raise that was made in the charge for boarding their teams by the contractors.

The canneries on the Skeena River, according to British Columbia late mail advices, are hard at work, and much of the spring salmon has been put up The sockeye salmon are just beginning to run, and judging from the present prospects the outlook is none too promising. The Skeena cannerymen do not anticipate a large run. They are prepared for an average catch, but they do not expect to get more than about two-thirds of that amount. Boats are now out fishing, but that the salmon are not running very thick may be seen from the fact that they are only getting from 10 to 15 a day. Fishermen are scarce on the Skeena, they having migrated to Rivers Inlet, where the fishing is not so difficult as it is on the Skeena, and in consequence more money is to be made.

A Cornwall dry goods merchant, E. O'Callaghan, has opened a branch at Martintown.——Duffy & Hayland, general storekeepers at Courtright, Ont., have dissolved partnership.——Henry Banwell has purchased the harness business formerly owned by A. E. Watson at Windsor.——Belanger & Desjardins are commencing a grocery business in Montreal.——A new machinery establishment has been started in Montreal.——J. R. B. Smith & Co. has been the name of a Montreal wholesale millinery firm, but they have dissolved.——J. Chevrier is commencing a general store at Rigaud, Que.——The Victoria Hosiery Co. has been succeeded by G. O. Gervais & Frere at St. John's.——F. Dolmage has opened in the harness line at Plum Coulee, Manitoba.——Campbell McDaniel is about to engage in the general store business at Sherbrooke, Que. Let us wish him well.——Konig & Fraser was the name of a firm in the dry goods trade at Westville, N.S., until the other day, when Frank J. Konig sold out his interest to J. McDonald, and now the new firm is styled McDonald & Fraser.——Hoover & Son, flour and feed merchants at Toronto Junction, have been succeeded by J. S. Watson.——Smith & Taylor, wholesale grocers, Windsor, have dissolved partnership, and the business will be continued by J. F. Smyth & Co.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT" By W. H. PRESTON, (President of National Association of Credit Men.)

● ● ●

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

In July, 1896, Little Bros., grocers, Windsor, bought out John Scott and paid $500 therefor Neither knew anything about the trade and the result of the brief effort is an assignment.

A. L. Barton, who carried on a boot and shoe business at Niagara Falls, died last month, and the estate has passed into the hands of an assignee, who will close it out.

The Customs Department has issued a notice to the effect that in making entries of tea, it shall henceforth be necessary for importers to designate the country of origin.

In April, 1895, Pearcy & Knox commenced in the hardware line at Cobourg, each having invested $500 in the business. They made no more than a living from the start, and in April last gave a mortgage on what chattels they had, and now they have assigned, owing $2,300, and having $2,000 assets.

The Norwegian steamer "Hungaria," of Christiania, went ashore on July 3rd at Sparling's Brook, Cape Breton. She left North Sydney for Montreal, coal laden. The crew was safely landed. The ship will likely be a total loss. The captain says his compass was astray, and the fog obscuring the light, was the cause of losing his ship.

At Stanley, N.B., on the Nashwaak River, 700 pounds of tobacco and a number of caddies were seized by Government officers on Saturday, on the premises of J. A. Humble, as smuggled goods. For some time past these officers have suspected that tobacco was being smuggled in *via* C.P.R. from Aroostook, Maine.

The Montreal Board of Trade has cabled to Sir Wilfrid Laurier, asking that the first speech he delivers in Canada after his return may be to that body. They propose to give him a banquet, and when it comes off it will be a rouser. We in Ontario are proud of Mr. Laurier, as our representative in Britain during the Jubilee festivities, but we are not so proud of him as the Quebecers.

Here are a few Western Canada items of interest: C. E. Stevenson & Co., of Nanaimo, B.C., have closed their branch at Union, and have started at Steveston, in that province, with a dry goods stock.---E. C. Arthurs has sold out his drug shop at Nelson, B.C., to the Martin & Lamont Company, and the general store firm of Bradshaw & Clough at Slocan City have disposed of their stock to E. Parris & Co.

The coasting trade, says the St. John, N.B., *Record*, remains in a very flourishing condition, the demand for sailing craft being steady and large. The prospects are that it will remain so for an indefinite period. For the last three months vessels have been coming and going in hot haste, cargoes piling up in waiting for them, while before the usual amount of business done was done very quietly. Lumber is the principal cargo, this article itself taking even a more prominent place than ever in Provincial exports.

The Toronto Coffee and Spice Co., whose trouble we mentioned a couple of weeks ago, have effected a settlement with creditors at 35 cents on the dollar, cash.——George H. White, dealer in dry goods, etc., at Ingersoll, succeeded his father, David White, in 1895. The son had been clerking for some years for his father, and when the latter failed the creditors arranged with him to take over the stock, which amounted to $16,000, at 50 cents on the dollar. Trade has been a good deal cut up in that town, and of late Mr. W. has been unable to meet maturing obligations and assigns, with assets of about $11,000, and liabilities $1,000 more.

In the New York *World* the other day appeared a paragraph which stated that "one of the largest bicycle firms in Canada had failed as a result of the break in the bicycle 'pool,'" and McLean & Oakley, Toronto, were named as the firm. This partnership has existed since last February. McLean was formerly of McLean & Bulley, bicycle manufacturers, and Oakley was a gunsmith. It is stated that McLean took $4,000 out of the old business, but whether it was all invested in the new firm is not known, for he refused to say. And it is also reported that the new firm has made no headway owing to the extravagance of McLean Now they have assigned. This, however, was not "one of the largest Canadian firms."

–S. M. Clapp & Co. succeeded Kennedy & Adams in 1887, failed in 1889, when the business was bought by J. H. Clapp, Napanee. Then in January, 1890, S. G. Clapp, the present owner, succeeded J. H. The above is the early history of the Clapp Shoe Co., this city. Lately business has been dull, and Mr. C. has found himself financially embarrassed. A statement shows liabilities to be $67,000, of which $15,000 is for cash advanced, which is secured by goods valued at $19,000. The assets are placed at $47,000, which include this $19,000. The stock has been bought again by S. M. Clapp at 75 cents on the dollar, and S. G. Clapp is offering creditors 40 per cent. of their claims in cash, provided he gets a discharge from them.

The Yarmouth ladies mentioned in the subjoined paragraph have good hearts and good sense. Mrs. Robert Cale and Miss Clara Killam, daughters of the late Samuel Killam, of that town, have made a gift of the splendid property known as the N. K. Clement homestead, including a park, mansion and lodge, the whole forming one of the finest places of the kind in the Lower Provinces, all as a free contribution to the Yarmouth hospital project, provided $25,000 more is raised towards the fund. The fund started with a promise of $5,000 from one gentleman, and a vote of $3,000 from the town. These same ladies, it is said, have already presented the Milton library with a pretty little building erected for the purpose, and have put up a handsome public fountain at Milton.

—The "unconquerable British spirit" is shown in the fact noted in a despatch from Aden to the Evening News of London. It says that on June 22 the survivors of the wrecked steamship "Aden," after being buffeted for thirteen days by the tremendous seas which swept over the ship as she lay on the reef off Socotra Island, celebrated the Queen's Jubilee and sang "God Save the Queen."

THE SITUATION.

A point has been now reached when the significance of the Jubilee celebration can be fairly estimated. It means, whatever else, a United Empire, marching in the front rank of civilization, animated by a common impulse, and looking forward to new triumphs in the path of peace. This Empire desires nothing so much as peace. Her great navy looks only to the defence of her numerous possessions in all parts of the globe. One question is whether, in what form, and to what extent, the colonies should aid in the naval defence of the Empire. At a meeting of the United Empire League, in London, with the Duke of Devonshire for chairman and Lord Salisbury as vice-president, Col. Denison, of Toronto, suggested that 75,000 Canadian seamen be trained as a navel reserve. The mere magnitude of the proposal must go a long way towards proving fatal to it, just as the million-dollar fund of Lady Aberdeen caused her scheme of a national nursing foundation to come into the world still-born.

It is undeniable that, if there is a weak point in the British navy, it is that it is insufficiently manned; it is also true that the nearest point at which this deficiency could be in part supplied is Canada. Training seamen by relays might do much to supply the present deficiency. Auxiliary naval aid is being supplied in different parts of the Empire, each in its own way. Besides the vessels which belong to the auxiliary naval reserve, the Cape of Good Hope and Australia are each doing something in the form of naval defence. The natural development of this force, the form it tends to take, will probably be found to be the best, since it develops the least friction and must give the best satisfaction.

The Imperial Confederationists have long been awaiting for some one to formulate for them a plan of procedure. At last, the word has been spoken, and it came from a quarter which, a year ago, seemed most unlikely to generate it. Addressing a meeting of members of the British House of Commons, Sir Wilfrid Laurier suggested a scheme of federation, in which the Imperial Parliament would be the Grand Council of the Empire. He foresees, however, that the realization of this idea is a long way off, so far off that a fortnight ago he did not hope to live to see its accomplishment. He then declared that with him the work of the hour was to obtain the denunciation of two treaties which stand in the way of reciprocal preference in trade. Imperial confederation is then for Sir Wilfrid Laurier rather a distant ideal than a practical object of attainment in the near future.

In pursuance of the policy of reciprocal preference, New South Wales has been officially declared entitled to the benefit of the new rule. The objection will of course be raised, in the name of agriculture, that Australian mutton will too closely compete with Canadian. Australia has a decided advantage in the growing of mutton over most other countries, and the natural question to ask is whether this country cannot, by opening wide her ports, contrive to share that advantage. Even if there were no duty on Australian mutton, Canadian mutton would have the protection of the cost of carriage from one side of the globe to the other. To all except the growers of Canadian mutton, cheap Australian mutton will be a boon. A trade in this meat would not be one-sided. The producers of mutton in New South Wales, or their neighbors, may be expected to buy from Canada some products in return. Reciprocal preference, on the lines sanctioned by the Canadian Parliament, makes for free exchange between the nations.

On the practical question of denouncing the treaties that stand in the way of the policy of preference, on which Canada has entered, the cable reports a difference of opinion between the colonial premiers, who are unanimous for denunciation, and Mr. Chamberlain, Secretary of State for the Colonies, who is said to be disinclined to put an end to the treaty with Germany. If this statement describes the real state of the case accurately, Mr. Laurier has told us in advance what must happen; if England does not advance, he has said, Canada must recede from her policy of preference. But the law according preference is in force and cannot be altered till next session. Whether any backward move can be made under the law, or whether it will be necessary to consider this question, in the meantime, are matters which, disquieting as they look, need not disquiet us. Canada's right to grant preference has taken the form of a legal assumption, crystallized in an Act of Parliament. Whether that Act is constitutionally assailable, the law officers of the Crown, in England, may enquire. If the decision be against the validity of the Act, what is the remedy? Resort to the use of the veto is not among the probabilities; perhaps there may be some way of bringing the matter before the Privy Council for decision.

A strike of coal miners in six States may give our neighbors and ourselves much trouble. One enigma connected with the situation is the admission, alleged to be generally made by the mine owners, that the demands of the workmen are entirely reasonable. And if the pictures given of the miserable condition of their surroundings be half true, this may well be believed. The puzzle is to know why reasonable demands are not granted. Machinery has abridged human labor in the mines, and the small amounts which some have earned for a month tell of an absence of full employment. The wages asked are relatively low, lower than they have often been in the past, lower than the workmen can live on in decency. It is not improbable that the mine owners may welcome a temporary cessation of work in the mines, with a view of forcing up the price of coal. The workmen, who begin the strike without any fund on which to subsist, must soon submit to almost any terms which their employers may dictate. The outlook is for them indeed black. This squeezing of the workmen in coal mines is a thing which Canada, for her part, should try to make impossible. It is not to be done by monopoly basking under shelter of the tariff, for not in coal, any more than in anything else, do high prices afford any guarantee of fair wages.

A set attempt is being made in Toronto to strike down the local improvement system, which has been in operation for many years. Defective it is and capable of improvement, no doubt, but its fundamental principle is unassailable. Before farm land can be admitted to the privilege of being transformed into city lots, certain conditions precedent may reasonably be insisted on. Drainage, roads and water supply are the chief requisites, and the cost of these may reasonably be thrown upon the owners of the land, who are to benefit by the change. Up to this point the local improvement system works with tolerable fairness; though it may be that limitations of taxation in other directions should result from these special obligations. When the city was increasing in population at the rate of 10,000 a year, people concluded that this was a normal rate of progress and would last for ever. This miscalculation caused many errors in expenditure which have to be atoned for. But this is no reason why the local improvement system should be got rid of with a hurrah! and without a distinct understanding of what is to follow. A partial change is necessary, not a complete revolution. Many property owners are suffering, but this is due largely to their own mistakes; and they are not in a worse case than many property-owners in large American cities have occasionally found themselves.

A rumor comes, not from London, but from Manchester, that the colonial premiers have agreed with Mr. Chamberlain that the colonies ought to have representation in the House of Lords. An individual colonist might be appointed to the House of Peers, but it would be a misnomer to call him a representative in that chamber of the colony from which he came. This plan, if carried out systematically, would somewhat resemble what takes place in Germany; but there it is the sovereigns, not the people of the German States, who are represented in the Upper Chamber. If the colonial appointments to the House of Lords were not systematic, but sporadic, the representative character of the appointments would be still more shadowy. The plan, if there be a plan, seems more like offering a bait for ambition than anything that can properly be called colonial representation. There is, perhaps, no reason why a colonist should not look to the honors of a Lyndhurst, who was a colonist born; but if this be desirable, it cannot be desirable on account of its representative character, but solely as a recognition of colonial merit when that quality reaches a certain height. The more flexible these things are the better.

As it leaves the Senate, the Dingley tariff bill contains the item of white pine at the reduced rate of $1 per 1,000 feet. Should the conference committee agree to leave it at this figure, Canada might reasonably forego its right to put an export duty on logs. And this on the principle of give and take, where no formal reciprocity is on the carpet. Reciprocal benefits should always be welcome; reciprocal injuries should be avoided whenever it is possible.

ADVERTISING A COUNTRY.

The changes that have come over the tea-drinking world of Europe and America in a generation are marked. China teas were the teas when some of us were juvenile clerks in country stores. But Japan teas came in and undersold them largely. To-day we discover that both Japan and China teas find a strong competitor in the India and Ceylon article. So much so that the Japanese Government is said to have appropriated $750,000 to be used in America for advertising their teas. This is deemed necessary because of the successful efforts of the Ceylon and Indian Government representatives in getting their teas before the public in Canada and the United States, and thereby largely displacing those of Japan.

There is a lesson here for Canada. We do not grow tea, nor export it; but we do grow or produce other things for which we wish to establish a market abroad. If the Japanese can afford to spend money at the rate indicated above in order to market one of their principal products, may Canada not do well to make liberal appropriations for a like purpose? The word "advertising" used in this connection does not mean, at least need not mean, printed advertisements, merely, but the payment of agents, trade commissioners, lecturers, experimental shipments, or what means soever will achieve the object—the popularizing of Japan teas. Nation in competing with nation in other markets than their own find it necessary to spend money. The Canadian nation cannot expect to succeed as a competitor—so the Australian correspondent of The Monetary Times has told our readers again and again—by merely sending circulars or catalogues to foreign lands. We must spend some money, but let it be spent intelligently, whether public or private money.

OUR WOOLEN INTERESTS.

The woolen factories of Canada are of little more than sixty years' growth. In the year 1837 two mills —one at Georgetown, Upper Canada, and the other at Chambly, Lower Canada—were fitted out with the machinery necessary to carry the manufacture of woolens from the first to the last stage of the process. Previously there had existed numerous custom mills throughout Eastern Canada, but they were merely adjuncts of the domestic system, assisting the housewife in the work of cloth-making. The beginning of the factory system in the Canadian woolen industry dates from the accession of Queen Victoria, and has been developed during her reign. There is at the present time, according to the estimate made by a reliable authority, fully $15,000,000 invested in the woolen goods industry of the Dominion. This vast sum of money does not represent the accumulations of a few corporations, as in the cotton industry, but is distributed among almost 800 mill-owners, whose interests extend over the five provinces of Eastern Canada.

But in spite of the marvellous growth of the Canadian woolen goods industry, the manufacturers engaged in it are not prosperous. The number of failures that has taken place recently in this branch of textile manufacture indicates extreme depression. A number of causes have contributed to diminish the return to capital invested in Canadian woolen mills. It is difficult for an ordinary observer to see any excuse for the fact that under usual circumstances there is a lapse of ten months from the time a season's samples are submitted until the date of final payment for the goods produced. And yet, in spite of the vigorous organized opposition of a number of the more important manufacturers, it is the custom to submit samples for the spring trade of one year to the wholesale merchants in May of the preceding year; the orders are then taken, and the goods delivered in July, August and September, invoices being dated November 4th at four months. The wholesale merchant is able to carry on this trade with the manufacturer's money, and when disaster comes, as it has done several times during the past year, to the jobbing houses, the woolen manufacturer must bear the brunt of the loss.

A serious difficulty against which the Canadian makers of woolen goods have to contend is the prejudice existing in Canada against domestic woolens. The tailor advertises his fabrics under the name "imported," as if this were a special recommendation. Before the recent tariff commission it was repeatedly shown that merchants were selling the product of Canadian factories under the description of "made in Nottingham," or under the name of some other foreign textile centres which had the advantage of a reputation gained a century ago. The prejudice is not peculiar to Canada alone, but extends to all countries where the industries are comparatively new and are struggling for a position. Although the output of British, German and French looms is of undoubted worth, it would probably give unexpected results to compare piece by piece the imported and domestic goods in stock in the Canadian wholesale houses. A large proportion of the fabrics exported from the United Kingdom and European textile centres to this country consists of seconds, showing faults upon careful examination.

The Canadian mill-owner is at a disadvantage in regard to the cost of his plant and the payment of labor. The expense of equipping a knitting mill in Canada is about 50 per cent. greater than in England. A knitting mill that in Canada costs $300,000 to place in working order could be equipped in England for $200,000. Taking into account the interest and allowance for depreciation on these two sums, the English manufacturer has an advantage of about $12,750 each year over his Canadian competitor. The same inequality is shown in the matter of wages. In the Canadian mills 326 persons employed in different capacities earned an aggregate sum of $101,730 last year. The same number of people engaged in similar occupations in England received $73,950, and in Germany, $52,590. The higher wages paid in Canada is, from the standpoint of the workingman, a cause for congratulation, but from the wider view of the welfare of the industry it is a serious barrier in the way of progress. An abundant supply of cheap raw material has failed to counterbalance the disadvantages arising from other sources. Twenty years ago it was thought that in a few years Canada would be in a position to export woolens to foreign countries, and especially to those countries that have a climate similar to our own. But the export trade in Canadian woolens has been of a very limited character, amounting in value during the past five years to the following figures: 1892, $80,644; 1893, $35,992; 1894, $30,262; 1895, $71,942; and 1896, $62,393. The future offers little prospect of improvement in this direction, and manufacturers look to the protection of the home market as their only chance of regaining prosperity.

What effect the new tariff legislation of the United States will have upon the Canadian woolen mills is not yet apparent. The fleece wool of Eastern Canada is suited in a special way to the manufacture of worsted goods, and as the clip is far larger than the requirements of the two mills in Canada making worsted cloths, the bulk of it is exported to the United States and cheaper wools are imported from the Cape, Australia and other countries to take the place of the domestic wool. The prohibitory duty which Congress has been contemplating so long, and which now seems imminent, will, of necessity result in a depreciation of wool values in Canada. The manufacturers of this country, with free wool, have a great advantage over the manufacturers of the United States, and if Congress does not increase the duties on woolen goods they may be able to increase their exports to the United States, and will certainly hold their own market free from the encroachment of American manufacturers.

But in the tariff changes that have taken place within the past year, the Canadian woolen interests consider that their position has been, to say the least of it, in no way improved. England is the great centre of woolen production, and the trade preferences extended to the Mother Country by the Dominion Government are considered a serious blow to the Canadian woolen industry.

THE FAILURE LIST.

Dun's Review publishes the following figures, giving the number and amount of the failures of the last three months among Canadian traders. The number is 368, owing almost three million dollars:—

Provinces.	No.	Assets.	Liabilities.
Ontario	181	$811,829	$1,239,633
Quebec	116	915,595	1,245,439
British Columbia	16	106,745	107,200
Nova Scotia	26	86,280	139,569
Manitoba..............	18	152,731	128,010
New Brunswick........	8	20,500	66,500
Prince Edward Island ..	3	6,000	13,000
Total............	368	$2,099,680	$2,939,351

On April 24th, 1896, THE MONETARY TIMES said: "One hundred and twenty-five general storekeepers, owing $7,000 each on an average, failed in three months this year in Canada.

"One hundred and eleven grocers and provision dealers failed in the same time in our midst, owing in all $350,000.

"Fifty-seven dry goods dealers; forty-five hardware dealers and forty-four shoe merchants, owing between them close upon a million and a half, came to grief in the last three months, according to R. G. Dun & Co., whose business it is to record these things.

"Not only these—there were hundreds more in various other classes of traders and description of manufacture who in the short space of three months brought the total of Canadian failures to 738 in number, owing $5,475,000, and showing assets of no more than $4,258,000. . . .

"Searching in this list for the most distinguished among these classes, we observe with some curiosity that besides 42 failed furnishers (owing $343,000), who simply sold clothes, there were forty-three 'clothing and millinery manufacturers,' who presumably made clothes as well as headgear, and these owed $158,368. So these 85 persons owed over $400,000—something like $5,000 each. Tailors and tailoresses, man milliners and woman milliners, getting credit at the rate of $5,000 apiece and failing at the rate of one a day. What will the harvest be? Well, let us change the subject!"

Comparing the figures given above for April, May and June, 1897, with the corresponding period of 1896, we find that in the three months of last year there were 384 failures, with $2,815,249 of liabilities. And for the half-year ended with June last the total was 1,042 failures of traders, owing $8,124,351, as compared with 1,122 failures, owing $8,560,789 in the first half of 1896. The assets were about the same in amount in each half year, being $6,200,251 in 1897 and $6,214,202 in half year of 1896. These figures include both manufacturing and trading concerns. At this rate we may look for an aggregate of liabilities of failed traders by the end of this year equal to fifteen or sixteen millions of dollars. The average aggregate for the last dozen years has been $15,980,000, ranging from $8,743,000 in 1885 to $17,858,000 in 1890, and $12,683,000 in 1893. This is a melancholy record, and tells us what has been true at any time these twenty years, that there are too many traders in Canada for the business to be done, and that there is much need for a revision of our credit system.

MARITIME PROVINCE INDUSTRIES.

Although wooden shipbuilding has gone down of late years, we must not think that the Maritime Provinces of Canada, so named because "bordering on the sea," as one meaning of the word maritime is, are likely to consent without an effort to relinquish the important place given them by Nature in their geographical situation. Our brothers of the Gulf of St. Lawrence and the Bay of Fundy, and the islands of Cape Breton and Prince Edward, are largely navigators; many of their merchants are world-wide merchants, and so long as there is coal, and fish and timber to be carried outward, and natural products of other countries to be brought to our shores, they are likely to take a hand in the transport of such merchandise. If wooden ships are no longer economically possible, they will build—or buy—iron ones, perhaps steel ones. But wooden shipbuilding is not dead yet.

A gentleman well known in mining circles of Quebec and Nova Scotia, Mr. R. J. Leckie, of Torbrook and Truro, N.S., while in Montreal the other day, was interviewed by representatives of Montreal and Toronto journals upon present industrial conditions in the Maritime Provinces. And he stated some facts that are well worth repeating here, as to the enterprise of the stalwart folk of our Eastern provinces of the Dominion. To the question whether Nova Scotia, so rich in coal and iron, would ever do much in iron shipbuilding, Mr. Leckie replied:—

> I think it is doubtful, because the plant required is so very expensive that I am afraid the cost would be somewhat beyond our means. There are a number of people, however, in the Lower Provinces who have become owners of iron steamers, built, of course, on the Clyde and elsewhere, and I learn they are doing very well. Amongst others are J. W. Carmichael, ex-M.P. for Pictou, as well as several Yarmouth and New Brunswick firms. Messrs. W. Thompson & Son, of St. John, N.B., are said to own three iron steamers, and I understand that the last one built has cleared 25 per cent. of her total cost in one year. These boats are about 5,000 tons, use 22 tons of coal daily, and steam 10½ knots an hour. Generally, as in the case of the old-time sailing vessels, the captains are part owners, and they being able to do a great deal of the ship's business at each port, they are run much cheaper than the ordinary liners.

Another matter which Mr. Leckie referred to is the Greenland trade, which it appears has created a demand for a number of staunch wooden ships, two or three having been lately built in the Bay of Fundy. These vessels are used to bring cryolite from Greenland to New York, and a certain quantity has been sent to Cleveland, Ohio, *via* the St. Lawrence. Cryolite, a fluoride of sodium and aluminum, is used in the manufacture of soap, alum, soda and cryolite glass. A different variety of it is obtained in the Ural Mountains of Russia, but in Greenland it is found associated with galena, pyrites and chalybite, and there is a big mine of it at Ivigtot in South Greenland.

Commercially and industrially the Maritime Provinces are by no means badly off just now; of late they have been doing better, we believe, relatively than either Quebec or Ontario. Nova Scotia has varied and valuable resources, notably, coal, iron and gold, as well as fish and timber. Opinions differ as to what the effect will be of the new tariff on her West India trade, as well as her iron industries at Londonderry and Ferrona, but the output of coal keeps up, and indeed is likely to be larger than before. The gold quartz of Nova Scotia, which even thirty years ago was worked at a profit, is now, from the use of modern economic methods, on the eve of greater activity in production than ever. Mr. Leckie speaks in most hopeful terms of the present comparatively prosperous condition of the gold mining properties in the counties of Halifax, Guysboro, Hants, Queens and other sections of the province. "All the mines now being worked," he says, "are paying; they are mostly owned by our own people, and, being run with improved machinery, the result is generally a profitable investment."

GOLD MINING IN WESTERN ONTARIO.

A well-known gentleman of Montreal, Col. J. D. Crawford, spent some time in the Lake of the Woods mining district of Ontario, and was present at the mining convention at Rat Portage in early June. He appears to have been much impressed with what he saw and learned during his stay of the capacities of that region in the way of mineral production. Indeed, he expresses his regret that in the comprehensive review of the general situation given by the managers of the Bank of Montreal and Merchants' Bank at their annual meetings, no mention whatever was made of Western Ontario, or of her vast and, as yet, largely unexplored gold fields.

Col. Crawford reminds us that a number of men of large experience in South Africa, Australia, Mexico and other great gold fields, stated in the convention that they "knew of no country in the world possessing greater natural advantages or brighter possibilities as a gold producer." Their opinion is that "under proper management the district named would probably soon become one of the most productive gold fields yet discovered, owing to its wonderful deposits, which can be cheaply mined and reduced, its accessibility at all seasons, its cheap land, labor, timber for milling purposes and fuel, and its abundant supply of good food and pure water." Such advantages are at least likely to attract the enterprise and the capital of men in the Old World as well as the new, who are on the look-out for profitable investments.

In a letter to the Montreal Gazette, Col. Crawford compares mining in this district of Western Ontario with mining in the United States, as a profitable enterprise, basing his conclusions on the opinion expressed by Mr. N. C. Westerfield in the Winnipeg Colonist. This gentleman shows that "at the present moment the cost of mining, milling, amalgamating and retorting is $4 per ton at the Sultana mine, Lake of the Woods. When she increases her output she will naturally reduce the cost of treatment ; but, compared with others, she stands thus :

	Value.	Treatment	Profit and loss
Sultana	$20.00	$ 4.00	$16.00
Alaska..	3.75	1.50	2.25
Homestake	4.77	2.57	2.20
Comstock	43.86	35.71	8.15

The Alaska, Homestake and Comstock are well-known dividend paying mines in the States. This comparison, "that while the old and thoroughly equipped mines are consuming from 40 per cent. to 80 per cent. of the total value of the product in the treatment of their ore, the Sultana, still in her infancy, earns an 8 per cent. dividend on $1,500,000 by the consumption of only 20 per cent. of the total value of her product."

There are, doubtless, as Col. Crawford contends, other rich properties worked and to be worked in the same Ontario district., of such a character as to present entirely new problems to the scientist, astonishing him with the quantity of gold regularly and continuously procurable from rock in which free gold is rarely, if ever, seen, and yielding, at small cost of production, from $15 to $20 per ton of ore. And we agree in his conclusion that facts such as these, if generally known, will interest many people, and contribute to the growth of immigration whereby the country should be benefited.

TRADING WITH JAPAN.

The new tariff legislation of the United States, giving high protection to domestic industries, has led, in other countries than Canada, to a desire for retaliation. The treatment accorded Japan by the Dingley bill has been specially severe, and the Japanese do not feel disposed to give the United States more trade advantages in their adoption of new ways of living than are necessary. Canadians should be on the look-out to share in the trade which the Japanese industrial revolution implies. Ten years ago he first brewery was established in Yokohama ; the present annual production of beer in Japan amounts to 100,000 barrels, and the increasing popularity of this beverage leads to the opinion that it will soon displace saka, the native beverage, of which 5,000,000 barrels are consumed each year. The methods of the German brewers have hitherto been followed, but one of the largest brewing concerns in Japan has recently decided, according to the Chicago *Times-Herald*, to utilize American plant in the production of beer.

In a conversation reported in this journal Mr. Hudz Ikuta, the managing director of the Osaka Beer Brewing Company, says: "Heretofore we imported malt from Germany, made from what is known as the two-row grain, which is too rich in protein to suit the taste. The four-row barley of Japan and four and six-row barley of this country are far preferable, and as to hops, I consider the American product not only equal, but superior to the best German and Bohemian. Hence we shall import both barley and hops from America." The almost world-wide fame of Canadian barley should render profitable trade in this cereal with Japan possible. The Japanese barley crop is insufficient to meet the demands of the new industry in that country, and if it is increased the brewers of Japan may find with those of the United States that Canadian barley has superior malting properties.

What British Columbia can do in hop growing is no longer a matter of conjecture. Hops have been grown in the Pacific Coast province of very superior quality, and fully as good as those grown in the hop yards of Pacific States. Only limited shipments have been made in Eastern Canada. At present there are no stocks of British Columbia hops in Toronto, but merchants say that if available they would bring about fifteen cents per pound, or three cents per pound more than the hops of Ontario growers. Shipments made in England have been well received and commanded high prices. In the matter of transportation the British Columbia growers can secure as advantageous rates as those of any other country, and should be able to find in Japan a profitable market for their product.

THE FLAX INDUSTRY.

The possibilities of building up in Canada a profitable industry in the manufacture of linens have been frequently discussed. An attempt at linen manufacture was made in Ontario during the Civil War in the United States, but when the war had closed and the cotton market resumed normal conditions, the venture met with an untimely end. The wives of the French-Canadian farmers of the Province of Quebec for almost two centuries had been weaving flax into linen, with which to make household fabrics and garments. But the industry in Canada has never successfully passed the domestic stage. The flax grown in this country is not, it appears, well suited to the purposes of linen manufacture. Canadian flax-growers have recently been attempting to gain a foothold in the Irish textile market, but with little better success than in former years. The Belfast correspondent of the Draper's Record says :

> "Canadians have recently been offering flax to Belfast merchants. Hitherto the States have taken the entire production of Canada, principally for coarse threads, but, owing to the prohibitive tariff, the Canadians are compelled to seek out a fresh market. Canada has been doing her best to encourage imports, and we should reciprocate by taking her flax. The samples sent were, on examination, however, found too coarse for this market, and they were withdrawn. I understand they are preparing themselves to meet the demand from this side."

A year ago the Ontario flax interests formed an association, with the object of extending the market for flax grown in Canada. This association should now be active in acquiring information as to the exact nature of the needs of the Irish market, and if found practicable take the steps necessary to develop an export trade in flax.

COAL PRODUCTION IN THE STATES.

Six hundred thousand tons of coal every working day was taken out of the coal mines of the United States last year. By the returns the coal output of the fiscal year was 190,639,959 net tons. This was less than that of the preceding year, and the shrinkage was almost entirely in eastern anthracite In the west Illinois continued to hold second place, increasing the output some 2,000,000 tons. The States of Colorado, Indiana, Iowa, Kansas, Missouri, Utah, Washington, Wyoming and Montana showed decreased production, but the phenomenally low prices offered for soft coal had something to do with this feature. Great preparations were made at many western points early in this year to mine coal extensively for domestic consumption, based on the certainty that fuel users will substitute soft grades, if anthracite prices and freight charges rule at the excessive rates of last year. It is of course difficult to forecast the result of the strike, because we are too distant to estimate the resources of the strikers. It is manifest, however, that all calculations and intentions such as are foreshadowed above must be upset by the fact that more than half the coal-workers of the States are meantime on strike.

ATLANTIC STEAMSHIP SERVICE.

We have received a pamphlet with the above heading, being the third article in *Queen's Quarterly* on that subject, by Sir Sanford Fleming. He is very strong upon the risks of the northern route to the St. Lawrence by Belle Isle, and cites accidents, detentions, icebergs, etc., etc., as rendering that route undesirable. Referring to the approval by Parliament of the contract of Peterson, Tate & Co., Sir Sanford points out that there is nothing in the contract to prevent the adoption of conditions which he thinks are of great importance. Among these is the establishment of a port of call during the open season on the Eastern Atlantic coast of Nova Scotia, Sydney, in his judgment, being preferable. He strongly advocates the adoption of the route to the South of Newfoundland, through Cabot Strait, as superior to the northern one, through the Straits of Belle Isle. "While the establishment of a 'port of call' convenient to Cabot Straits," he says, "would confer great advantages to the community, and especially to the Maritime Provinces and Newfoundland, it would at the same time materially advance the interests of the steamship company. The arrangement would certainly secure to the new line the passenger and mail traffic of Newfoundland, which it would otherwise lose; moreover, without it, a considerable proportion of the passengers of the Maritime Provinces would continue to find it more convenient to take the trans-Atlantic steamship at Boston or New York than at Montreal or Quebec."

We may here note a letter which Mr. Dobell received yesterday from Mr. Petersen, dated Newcastle-on-Tyne, June 23, from which it appears that the requisite capital for the fast line, amounting to £2,000,000 sterling, has been all subscribed. Sir Blundell Maple, it appears, has subscribed £500,000 towards the enterprise, and this is one-fourth of the whole. Mr. Petersen is very confident of success. Indeed he expresses his determination to make the Fast Line project "a ringing success." Canadians generally will wish him well.

MANITOBA CROP PROSPECTS.

In addition to the general conclusions reached from a *resume* of the report from 350 correspondents on Manitoba's crops, made to the Department of Agriculture and Immigration last month, we have now the Bulletin No. 52 itself. The area under all crops, according to this, is 1,958,025 acres, which is an increase over any previous year, and comfortably near two millions of acres. Sixty-five per cent. of the whole is in wheat, and the increased sowing of wheat this year is general; about twenty-three per cent. in oats, and seven or eight per cent. in barley, and the prospect for cereals is good. The area in different grains is shown below by districts of the Province:

District.	Wheat. acres.	Oats. acres.	Barley. acres.
North Western	90,000	68 940	13,770
South Western..............	554,626	169,925	32,856
North Central	240,181	73,656	37,740
South Central	320,000	105,100	44,000
Eastern	86,075	50,520	24,900
Province..............	1,290,882	468,141	153,266

The present area in flax is low compared with some former years, being in 1897 and 1896 only 20,500 acres, where in 1895 and 1894 it was 82,668 and 30,500 acres respectively. The probable reasons for this we have mentioned elsewhere. Rye is sown upon only 2,975 acres; peas on 1,669 acres, corn (we presume maize) on 713 acres. The area in potatoes and roots has not increased, strange to say, according to the comparison furnished. Indeed roots show an actual decline of estimated acreage, from 7,880 in 1894, and 6,715 in 1896, to 6,130 this year. There was no less than 16,716 acres in potatoes in 1895, which has declined to 12,260 last year, and 13,356 acres this year. Most of the reports say that seeding began April 15th, was general by the 20th or 22nd, and the season was a favorable one.

During the second week in June rains were frequent in most parts of the province, and at present date (June 16th) continued rains, with warm weather, have given new life to all crops. Crop prospects are now greatly improved. There is estimated to be 821,370 bushels of wheat still in the hands of Manitoba farmers, of which quantity almost half is held by those of the South-west district. Correspondents were asked to state the number of cattle fed for beef during the winter, and the number of milch cows in their townships, and from their replies the following estimate is prepared:—

District.	Beef Cattle.	Milch Cows.
North-west district	1,425	11,440
South-west "	2,375	12,450
North Central "	1,449	13,480
South Central "	1,850	11,460
Eastern "	1,630	16,375
Total..........................	8,729	65,205

There are now 28 creameries and 31 cheese factories in the province.

WINNIPEG BOARD OF TRADE.

A general meeting of the Winnipeg Board of Trade was held on Tuesday, 29th June, and the account of it sent was not received in time for last week's issue. Mr. D. W. Bole, the president, was in the chair, and there were between twenty and thirty members present. The chairman gave a *resumé* of the proceedings of the council of the board at its various meetings, such, for instance, as the proposal to limit the legal rate of interest to 6 per cent., the legal rate of interest on judgment debts; the inspection of electric and gas light meters, the St. Andrew's Rapids, Crow's Nest Railway rates; discrimination in rates to Winnipeg, against freight coming to Fort William by independent steamers; the Rat Portage mining convention.

It was stated by Mr. Ashdown that Mr. Stephenson, of the Crown Lands Department, is preparing a report on the St. Andrew's Rapids, and indeed on the resources of Lake Winnipeg. The Department of the Interior, he said, desired the work to go on, but were sceptical as to the revenue to be derived from the water power. The Government engineer, Mr. Coste, had given assurance that the damming of the river would not raise the water in Winnipeg in the case of a flood.

Mr. Ashdown also told of his interview with Mr. Shaughnessy, of the Canadian Pacific Railway, as to freight rate discrimination against Winnipeg, and of his having written that gentleman thereupon Matters were now in negotiation between them, and it was not prudent to say more at this stage.

Mr. Bole described his visit to the Rat Portage mining convention; he regarded the convention a great success, a representative body of gentlemen from South Africa, California, Colorado, British Columbia and elsewhere having attended on that occasion; the opinions expressed foreshadowed bright prospects in mining on the north shore of Lake Superior.

Standing committees of the Board were elected as under:

Board of Grain Examiners.—S. A. McGaw, J. A. Mitchell, S. Nairn, S. Spink, D. G. McBean.

Board of Flour and Meal Examiners.—S. Nairn, R. Muir, S. Spink, F. W. Thompson, C. H. Steele, G. V. Hastings.

Board of Hide and Leather Examiners.—E. F. Hutchings, P. Gallagher, H. Leadley, A. Carruthers, F. W. Reimer.

General Grain Committee.—All the members of the board engaged in the grain and milling trade.

The resolution respecting the Winnipeg and Duluth Railway, moved by Mr. T. D. Robinson, seconded by Mr. Jas. Porter, was withdrawn at the suggestion of several members, to be brought up at next meeting.

HAMILTON BOARD OF TRADE.

A heat of ninety-five in the shade was sufficient to account for the small attendance at the annual meeting of the Hamilton Board of Trade on Monday afternoon last. Less than twenty members were present. The faithful few were: W. E. Robinson, president: W. F. Findlay, vice-president; C. R. Smith, secretary; John Knox, William Hendrie, St. Clair Balfour, H. N. Kittson, W. H. Glassco, Jas. Turnbull, Seneca Jones, Rev. Dr. Burns, F. H. Lamb, John Bell, Senator Sanford, John Proctor, and C. S. Murray.

The president read the report of the council, which dealt first with the floating debt of the board, and announced that rent and other expenses had been reduced. Respecting the suggestion in last year's report to form a retail section of the board, it was stated that after the heartiest efforts of the members to bring that arrangement about, and after several meetings with retail traders, the result so far has been the organizing of a separate institution of retailers, independent of the Board of Trade. The board is on record against the exclusive lease granted by the Ontario Government to the Niagara Falls Power Co., and in favor of the building of the Crow's Nest Pass Railway by the Government. It petitioned the Government in favor of an export duty of $2 per cord on pulp-wood. In connection with the visit of the British Association to Toronto, the council had appointed the officers a committee to extend courtesies to any of the members visiting Hamilton. The conclusion of the report is as under: "The outlook at the present time, comparatively speaking, cannot but be regarded as improved, although a good deal of caution is still very necessary in all kinds of manufacturing. Crops of every kind in the province are good, and the season has been all that could be desired for maturing and ripening, especially for fruit, but the hay and wheat crop is ahead of any year in the past. As far as present prospects can determine, forty millions of bushels of fall wheat will be produced in Ontario alone, with certainly a fair chance of improved prices, which bids well for our country."

Mr. Findlay, chairman of the treasury committee, presented the financial report.

Election of officers, being reached, the chairman was p[illegible] to say that Mr. W. F. Findlay had withdrawn his objection to being president, and Mr. Findlay was unanimously elected to that post. Messrs. H. N. Kittson and W. H. Glassco nominated St. Clair Balfour, but he declined, owing to press of business. Mr. Robinson then nominated Samuel Barker, a gentleman of wide business knowledge. W. H Glassco seconded the nomination and it was unanimously agreed to. Senator Sanford explained that Mr. Barker had stated that he would be glad to assist the board in any way, but he did not desire to assume any office intended for another. The council and board of arbitration were declared elected by acclamation as follows: W. F. Findlay, president; Samuel Barker, vice-president; C. R. Smith, secretary-treasurer; John Knox, W. H. Gillard, George Roach, W. A. Robinson, A. Turner, J. J. Mason, Senator Sandford, T. H. Macpherson, M.P., council; B, E. Charlton, J. M. Lottridge, F. H. Lamb and W. C. Breckenridge. board of arbitration; F. H. Lamb and John Bell, auditors.

Mr. Kittson gave notice of motion to amend rule 2, to the effect that the financial year of the board begin with Jan. 1, 1898; that the third Monday in January be nomination day and that the annual meeting be held on the fourth Monday in January. The motion was referred to the council.

The retiring president then delivered a very practical valedictory address. He said there were quite a number of matters that were never submitted to the board. A feeling existed among business men that the board does not fully represent them. Frequently bills came before Parliament of great interest to Hamilton business men, but most of them were never considered. He suggested the appointment of a parliamentary committee. There is an evolution going on in business, he said, that will seriously affect trade. He specially noted the bicycle. People were getting bicycles for themselves and their children who could not pay their legitimate debts. The bicycle also affected the working hours of employees. After referring to the possibilities of electricity Mr. Robinson went on to speak of pulpwood. Canada, he reminded his audience, is the greatest country in the world for spruce wood, from which pulp is made. He told of a test recently made, when 2 hours and 25 minutes after the tree had been cut down, it had been turned into a complete newspaper. Car wheels, tiles and even silk dresses were being made from spruce pulp, and Canada, he thought, should watch well her supply of spruce timber.

The speaker concluded by introducing Mr. Findlay, the new president.

HIDE AND LEATHER PROSPECTS.

Although the leather trade continues quiet, and values remain low, hides continue to advance in price with astonishing regularity. Toronto merchants are paying $8\frac{1}{2}$ cents per pound for No. 1 green cow hides, as compared with $5\frac{3}{4}$ cents a year ago. A part of the strength in the Toronto market comes from keen local competition, but in addition to this element there is a strong undertone to the hide markets of Canada and the United States. The proposal of Congress to tax hides 20 per cent. by the new tariff legislation has led to heavy purchases on the part of American tanners. Taking into account the strong statistical position of hides, there is little difficulty in explaining the recent advances in hides, in spite of the dullness in the manufactured product.

It is impossible to conjecture the effect of this tax upon hides by the United States Government. The Chicago *Shoe and Leather Review* says:—"In all probability the United States Leather Company will establish several yards in Canada, where, with free hides and cheap bark, it will be enabled to hold the immense export trade in hemlock sole leather it now enjoys. Of course the workmen thrown out of employment by the change will lose their affection for a protective tariff that takes the bread out of their mouths and deliberately hands it over to foreign laborers."

The statement made by the *Review* is probably intended only as a political argument against this protection which the Republican Senators consider necessary to hold the farmers' vote. Congress would not enact legislation of this kind, handing over an industry worth $20,000,000 a year to a country towards which it has shown anything but friendly feelings. The tanners of the United States will probably find their export interests well guarded by a system of drawbacks upon the exports of leather made from imported hides. The taxation of raw material, however, has not proved in the best interests of industry, and in this instance is calculated to do serious injury to important interests.

ON THE CHEESE BOARDS.

The cheese markets during the week have been active. The offerings were larger than in any other week of the present season. At the 16 board meetings from which we have received reports, 39,668 boxes of cheese were boarded. The bulk of the cheese placed on board was made in the second and third weeks of June. In view of the heavy offerings, and the prospects of a large make throughout the season, prices are declining. The prices paid at the different markets ranged between $7\frac{7}{8}$ and $8\frac{1}{8}$c. per lb. The exports from Montreal continue large, amounting for the week ending July 3rd, according to the compilation of Messrs. Cunningham & Lemessurier, to 64,523 as compared with 61,685 boxes exported during the corresponding week last year. The total cheese shipments to date aggregate 439,015 boxes as against 353,137 boxes sent abroad during the same period a year ago. We append our usual table of transactions on the Ontario cheese boards:

Boards.	Date of meeting. July.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date next meeting.
Chesterville........	1	..	1,023	..	8	......
Barrie	1	..	3,070	1,002	$7\frac{15}{16}$ 8	July 15
Kingston	1	..	1,521	500	8	......
Brantford..........	2	..	4,423	2,701	8-$8\frac{1}{16}$	......
Perth	2	..	1,000	..	8	......
Iroquois	2	..	150	..	8	.... .
London..........	3	42	8,136	4,565	8-$8\frac{1}{16}$	......
Belleville	6	34	3,309	1,539	$7\frac{7}{8}$-8	......
Ingersoll	6	..	1,380	210	8-$8\frac{1}{8}$	......
Madoc	6	18	1,130	1,075	$7\frac{13}{16}$-$7\frac{7}{8}$	......

FOR GROCERS AND PROVISION DEALERS.

Strawberries are being retailed in Western Ontario towns for three cents a box.

During the month of June the Exeter creamery made upwards of 37,000 pounds of butter, or an average of nearly 1,500 pounds per day. The output of this factory, which is daily increasing, is one of the largest in the province.

Although last week's shipments of cheese from Montreal across the Atlantic were less than in the like period of 1896, being 64,524 boxes, compared with 66,545 boxes, yet the total shipment to date this navigable season is 85,000 boxes in excess of 1896.

On Friday evening last the Retail Grocers' Association of Montreal resolved to ask the Provincial Government to appoint an official inspector of fruit for Montreal. This step is taken in order to prevent fruit unfit for human consumption being placed on the market.

Owing to the limited supply the price of Virginia peanuts may be advanced shortly. It is reported from Newport News, Va., that the stocks of shelled nuts in Virginia at the present time barely exceed 22,000 bags, as against 34,000 last year and 60,000 at this time in 1895.

The following little tale of business faults is told by the Detroit *Free Press*: "Have you noticed," asked Bloomer, "how Stubbins repeats himself?" "Yes," replied Blazer, "it is an atrocious habit. Yesterday he tried to collect a bill off me which he has collected twice before."

Calcium carbide is being tried in France as a remedy against the phylloxera, that pest of the grape vines. The residuum left from the manufacture of acetylene is used, mixed with calcium phosphate. When wet with water it disengages phosphoretted hydrogen, which is a powerful destroyer of insect life.

In their circular of June 17th, J. C. Houghton & Co., of Liverpool, say, with reference to currants, that trade is almost at a standstill, but that large operations would be impossible in view of the most depleted stocks existing. The total arrivals in Liverpool from the beginning of the season to June 15th amounted to 18,769 tons, of which 16,031 went into consumption. The stock in bond on June 15th in Liverpool was estimated at 1,838 tons, as compared with 3,889 tons on the same date last year.

The California "Fruit Grower" says in its issue of the 26th ult.: "There is a fair inquiry for choice stock, but the receipts are in excess of the general demand, owing to the large quantities of poor fruit arriving. The rains and cooler weather are proving beneficial to fruit, except cherries, many of which are showing damage. Choice, sound stock is finding ready sale. Pears and apples meet with slow sale. Figs meet with a good demand. Berries are in good demand. Currants are abundant. Oranges and lemons are neglected. Canners are indifferent buyers at this time."

A meeting of the Montreal Retail Grocers' Association was held on the 2nd inst. It was decided to hold the annual picnic at St. Rose on July 14th. Subscriptions for this purpose are coming in on all sides from wholesale and retail firms. It was resolved to ask the Government to appoint a fruit inspector for Montreal, who should have authority to examine all fruit offered for sale, whether in stores or on the street, the object of the association being to protect the consumer rather than the trader and to prevent unripe and unwholesome fruit being exposed for sale. It was suggested that the fruit be inspected on the vessel which brought it to the city, and, if bad, forthwith condemned.

Although the reports received as to the damage done by the earthquake in Assam to the tea industry are conflicting, it is stated from Calcutta that the first accounts were exaggerated. Several of the companies, says the London *Economist*, have issued reassuring statements, reporting either no damage at all, or damage that can be repaired without interfering with the business. A Calcutta cable states that it is uncertain whether the out-turn will be affected, and whether the processes of preparing the leaves for the market can still be carried on while the demolished withering houses and buildings are being prepared. The quality, however, is likely to be affected, while the difficulty of transport is a serious feature.

ABOUT DRY GOODS.

Dark blue veils are the rage in Paris, with cornflower blue hats trimmed with feathers in two shades of blue, blue chiffon and green roses.

It is now stated, with some degree of certainty, that this year's crop of silk will be smaller than that of last year in the following countries China, the Levant, France and Italy.

During the five months ending May 31st, Canadians imported from the United Kingdom linen goods to the value of £49,342. as compared with goods valued at £70,975 in the same time last year.

The latest belt is of moreen or silk-covered leather, with a jeweled or enameled buckle. These are made with catches after the style of those on a man's glove, so that they are interchangeable, and several belts can be worn with one buckle. Hardly second to these in popular favor, though not new, are the leather ones, with harness or double-trace buckle.

A large London firm has secured, for the entire season, a commodious and well furnished detached house at Walton-on-the-Naze, where every one of its hundreds of factory hands and warehouse staff will be accommodated, in batches of thirty at a time, with a fortnight's free board and lodging, in addition to receiving a present of three weeks' wages. Moreover, on June 21st and 22nd, the works were closed, and to each of the workers was presented three days' pay.

The merchant who looks into his business and studies its needs, says "Wide-Awake Retailer" in the New York *Economist*, will get more real ideas of how to interest his customers and sell his goods than the one who is continually looking beyond his territory for some big scheme that will make him wealthy and famous in a day. If you want to make business, interest the people you most desire to reach, and they will be every bit as willing to gladden you by their presence and purchases.

A Manchester, Eng., correspondent writes of textiles on June 25th: "Embossed worsteds have had a good share of support, Bradford firms having followed the example of Manchester in regard to this method of treating goods. Stiffer cloths are bought in cotton goods for blouse and other purposes. In woolen and worsted dress goods the demand is still largely centred upon blacks, reds, and navy blues. Royal purples have been largely used for trimming purposes, but do not seem to have met with corresponding support in the dress goods branch. Lavender, grey, and silver shades are not uncommon in the lighter cloths. The linen trade is steady."

METAL AND HARDWARE NOTES.

One hundred tons of zinc spelter was shipped by the Cherokee-Lanyon Spelter Works from Nevada, Mo., for Liverpool, via Galveston, Texas. This is the fortieth shipment made by the zinc works there and Rich Hill in the last five months.

The recent boom in mining has given a decided spurt to the output of mining machinery by the Jenckes Machine Company, at Sherbrooke. That company shipped a carload of mining machinery the other day to the Sultana mine, near Rat Portage. The car contained a compound duplex compressor of large dimensions. Two other large compressors are now being built at the works, one for Windsor Mills and the other for Cape Breton.

The Metal and Hardware Association of Montreal met on Friday last, mainly to discuss the question of hardware duties. The members believed that the interpretation of the law varied at different ports, placing many importers at a disadvantage. The meeting decided, after some discussion, to ask the Government to appoint an expert customs appraiser for hardware, with power to remedy the grievances of which members complain.

The Kingston Locomotive Works are busy just now, 168 men being on the roll, with a prospect of increase to 200 before the winter begins. They are building a number of iron barges for the Montreal Transportation Co., each 180 by 35 feet, to carry 35,000 bushels of grain; part of the sides is of steel, and the bottoms are to be lined with wood. The company are also building two more locomotives for the Quebec Central Railway, which was well pleased with the first pair. Mr. Leigh, the superintendent of the works, says that if they are to continue building boats in the winter season, it will be necessary to contrive some shelter from inclement weather.

Last month the producers of Mesaba (Lake Superior) iron ores put down their prices 25 cents per ton, and non-Bessemer iron also came down in price. As a result of the very low quotations thus made on foundry irons, southern furnace men have been compelled to rely on their soft irons for northern trade, which, by reason of their cheapness, continue to have a good market. Furnaces in the Chicago district, according to the *Journal of Commerce*, have been making prices that crowded back the southern product somewhat, however, and the foreign outlet for that grade has been a timely development for Alabama producers. "This is on the constant increase, not only from established sources of demand, but from new territory that has rarely been supplied from this market until very recently."

The Grand Trunk Railway system, the Canadian Pacific Railway and the Michigan Central Railway have jointly issued a circular which is supplement No. 4 to revised minimum basis for making rates to Canadian points from Central Traffic Association territory, dated September 2nd, 1895. The circular makes new rates on pig iron in car lots and is of considerable importance to the iron trade. The new rate from Chicago and Louisville, Ky., to Montreal, Ottawa and Brockville is $4.15 per gross ton; from Ironton, Ohio, $3.95, from Detroit, $3.30. The rates given in the circular, the above being only a few, apply to points from London, Ont., to Halifax, N.S. Wire roads in carloads from points shown in Central Traffic Association circular No. 2,450, October 4th, 1895, may be taken to London, Hamilton, Montreal, Dominion Highlands, Lachine and St. John, N.B., at the 6th class rates. Scrap iron and billets car loads should take 6th class rates to all Canadian points.

It may have been loyalty, but it is much more likely to have been economy of time effected thereby, that induced the master plumbers of Canada to hold their annual convention on Dominion Day holiday, July 1st, in Toronto. But they did not actually hold it on that day—one day couldn't hold it all—they only *began* to hold it on the 1st, and continued over the 2nd. Mr. Joseph Lamarche, of Montreal, the retiring president, presided. It was arranged that a branch of the association should be established in every town in the Dominion. On Friday evening the delegates were banqueted by the local members. Officers were chosen as under:—President, Jos. Wright, Toronto; first vice-president, W. Smith, Toronto; vice-president for Quebec, P. J. Carroll, Montreal; vice-presidents for Ontario, J. McKinley, Ottawa; J. H. Doody, St. John, N.B.; J. Barton, Halifax; T. A. Irvine, Manitoba; treasurer, W. Briggs, Montreal; secretary, W. Mansell, Toronto; executive committee, J. B. Fitzsimmons, Toronto; A. Pickard, Quebec; Thomas Campbell, St. John, N.B.; G. A. Perrior, Halifax, N.S.; W. Stevenson, Manitoba. Quebec was chosen as the next place of meeting. A correspondent refers elsewhere to the gathering.

Under the heading of "Up to-date Alchemy," a paragraph in the Buffalo *Enquirer* goes to show that that journal does not take much stock in the ancient theory of alchemy and the transmutation of other metals into gold. It says: "There is an easy way to make gold. Here is the formula: Take (1) cold-drawing seamless tubing, (2) tool-steel bearings, (3) hollow rolls of rubber, (4) piano wire, (5) second growth hickory. Make the ingredients into a $22 bicycle and sell it for $100." This is clever writing, and quite in line with the views of many who are unable to see why bicycles should be so high-priced. But the writer of the above paragraph forgot a few things in his enumeration of what is needed to make a good bicycle. We can supply some of them. To the formula above given must be added: (6) a good design or shape; (7) a sound patent; (8) a factory, with the most modern and ingenious machinery, and appliances, not only of a mechanical but of a chemical and artistic kind; (9) highly skilled artisans; (10) a competent manager; (11) salesmen who are clever enough to convert $22 into $100. We are not so sure, by the way, that a first-class wheel can be produced, finished and ornamented, for $22, and should think $32 nearer the cost. But in any case the margin is sufficient to give point to what we heard from the States last week as to the probable cheapening of bicycles.

A recent thunderstorm in the neighborhood of Berlin afforded an opportunity of measuring precisely the power of a flash of lightning. The experimenters took as their basis the amount of iron fused by a flash of lightning, and according to the statement which they have published, the power of a flash of lightning is on an average equivalent to 7,000-horse power.

SHOE AND LEATHER FACTS.

Two Quebec shoe factories closed down for several hours this week on account of the intense heat.

The Marsh shoe factory at Quebec is almost finished, and will employ between 700 and 800 persons. The old Polley factory in the same city will also open shortly, while the Canada Shoe Company has already commenced its operations.

Great numbers of old pneumatic tires for wheels come back to the dealers, one concern handling over 100,000 tires a year. These, instead of being thrown away, are now sent to rubber-reclaiming factories, where the rubber in them is reclaimed by certain processes. Last year over 1,900 tons of old overshoes were imported to the United States from Germany for this purpose.

A small boy dashed breathless into a merchant's office, according to London *Answers*, and said : "Is the guv'nor in ?" "Yes ; what do you want ?" "Must see him myself. Most pertickler." "But you can't : he's engaged." "Must see him immejit. Most pertickler." The boy's importunity got him inside the office and the merchant asked him what he wanted. "D'yer want a orffice boy, sir ?" "You impudent young rascal ! No, we've got one." "No, you *ain't*, sir ; he's just bin run over in Cheapside." Boy was engaged.

Pointed toes have lost their prestige, remarks an American exchange, and a round, roomy one has come in their place. It has taken months for this shaped toe to establish itself in general favor, but it is English, and the habit of following customs from that country is one of long standing. Therefore round toes will be seen on the feet of all the really swagger set this season. Tan shoes and other walking boots will take on this new style. Thus two important points will be gained—ease and novelty. For the street, black boots are preferred. The matter of fastening also is one of preference. Laced shoes show to greater advantage the natural shape of the foot, while a buttoned shoe will always lack grace.

Green shoes are being introduced on this market. A shoe man in conversation with the reporter of an American trade journal, advances the following argument in favor of the permanency of this colored leather. Quite a large percentage of yellow, chocolate, oxblood and green skins are spoiled by the tanner in coloring. If a yellow, chocolate and oxblood skin is spoiled, it is almost a dead loss to the tanner, because it will not take a black color then, and it must be sold as a second-class skin. But 75 per cent. of the coloring matter of the green stain used on green skins is black. So if the leather is spoiled in coloring, that is, if it does not take the green well, the tanner simply colors it black and sells it for as good a price as he'd get for a green colored skin. So you see a tanner would rather that oxbloods and chocolates would go out of style and green shoes take their place.

CANADIAN SAVINGS AND LOAN COMPANY.

The twenty-second annual report of this London company shows a satisfactory condition of its affairs. The paid-up capital stock amounts to $740,000 ; the reserve fund to $210,000, or nearly thirty per cent., and the contingent account to $19,048. The company's earnings for the year ended with May amount to $101,964, gross ; and after paying interest on deposits of $708,000 and debentures of $163,110, there remained sufficient profit to pay six per cent. dividend to shareholders, to add $5,000 to reserve, and to place $7,079 to contingent account. Investments in mortgage amount to $1,807,567, and the rate of earning is therefore over 5½ per cent. It is stated in the report that repayments on loans have been satisfactory, while the demand for money has sufficed to absorb the capital at command. The value of real estate in the hands of the company is frankly stated at $15,500, an amount by no means excessive in times like the present. For twenty years Mr. H. W. Blinn managed this company with great acceptance, and the death of that gentleman in April last is referred to by the directors with regret. For almost as long a period Mr. M. H. Rowland has been assistant manager ; and it seems a natural and proper thing to place its management in Mr. Rowland's hands, which we find has been done.

INSURANCE MATTERS.

The friends and admirers of the late C. C. Hine intend to build a memorial fountain to that excellent man in a park near his home at Woodside, Newark. It is to cost about $800, and this amount is to be raised by subscription.

According to the New York *Chronicle*, the Liverpool and London and Globe will issue a policy covering all the property of the Metropolitan Traction Company of that city, amounting to some $5,000,000. The premium is not known, but it will probably be about one per cent.

Montreal city council having voted $8,000 for a new steam fire engine, the fire committee of that body will receive tenders to-day for the supply thereof. Preference has been expressed for a new make of American engine.

To one who has known James street in Hamilton for the last thirty years, the present appearance of that portion of it opposite the market end of the Royal Hotel is most unnatural. The old Post Office building, which was bought by the Sun Life Company, is partly pulled down, and the remaining walls and ghastly interiors remind one of Tom Hood's "Haunted House." But the new building will be a handsome one. It is stated by the Ottawa *Journal* that the iron work for the new Sun Life building is being specially rolled at the Carnegie Steel Works, Pittsburg, and that the iron will not be ready for use before the middle of this month.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing-houses for the week ended with Thursday, July 8th, 1897, compared with those of the previous week :

Clearings.	July 8.	July 1.
Montreal	$13,589,459	$10,401,621
Toronto	10,027,231	5,627,622
Halifax	2,338,277	889,191
Winnipeg	1,377,304	1,324,304
Hamilton	798,862	486,771
St. John	890,705	551,923
	$29,021,838	$19,279,435

Aggregate balances this week, $4,349,815 ; last week, $2,677,224.

ONTARIO CROP PROSPECTS.

Fruit prospects in Ontario are good, and the farmer in the central counties of the district between Lakes Erie and Huron at least finds enough in looking over his fields to make him hopeful.

Never before in the history of the Leamington (Essex county) fruit section, says the St. Thomas *Times*, has there been such a crop of strawberries. During this week the express company has shipped 119,335 pounds of berries, or a little over 4,000 crates, to Montreal, Ottawa, and other points east. Two cars go west every night on the railway from Leamington, and the growers are reaping a rich harvest. In the opinion of the Aylmer (Elgin county) *Sun*, the present summer ought to rejoice both the grain farmer and the fruit grower. In the London district wheat is credited with 90 points—that is the Ontario average of 19.7 bushels per acre all over the province. "Hay is a grand crop, hogs 5c. live weight, spring crops fine, apples few, plums immense, grapes good, raspberries full, and strawberries extra full."

—We copy to-day an interesting article on the trade of Japan from the London *Economist*. The imports of that country last year were no less than 171,674,474 silver yen (about $114 000,000) in value, and the exports 117,842,760, or say $78,561,000. Great Britain sold the Japanese far more than any other nation, in the proportion of 58,251,000 yen as compared with 16,373,000 yen by the United States; 21,344,000 yen by China ; 17,183,000 Germany ; 22,517,000 yen by British India. The transport trade of the Empire is largely done by British ships, German and Norwegian coming next, but the Japanese are gradually getting a larger proportion of the trade into their own hands. No time should be lost by Canadian merchants and carriers in looking more closely after a trade for a part of which Canada is, as Mr. Nosse, the Japanese consul-general at Vancouver, has told the readers of THE MONETARY TIMES on more than one occasion, so well able to secure.

—At five last evening, too late for this issue, we received the Toronto Board of Trade bulletin giving the figures of outward and inward foreign trade at this port during June, 1897. The aggregate is close upon $2,000,000, consisting of $673,675 worth of exports, and $1,276,033 worth of imports. The imports consisted of free goods to the value of $411,077 ; dutiable goods, $856,416 ; coin and bullion, $8,540. The exports were mostly produce of animals, dead meats bulking well at $168,087, and wool at $133,857. The wood shipments were $172,023 and manufactures $78,749. Field products made but a small showing.

—It serves to illustrate the changed conditions of the money market to-day to state the conditions of borrowing by the Windsor Hotel Company, of Montreal, to-day as compared with the year 1882. A new issue of bonds has just been arranged for that company by Mr. R. Wilson Smith. The amount is $450,000, bearing interest at 4½ per cent., and payable in fifteen years. The rate of the old issue was 7 per cent. Should the new issue be for the same term as the old, the saving in interest by the 1897 bond issue as compared with that of 1882 will be a matter of $168,000, that is, at the rate of $11,250 per annum.

CANADIAN SAVINGS & LOAN CO.

The general annual meeting of this company was held at the company's office, London, Ont., on Wednesday, June 30th, 189,. Mr. Robert Fox, president, occupied the chair. The report and financial statement were submitted and adopted as follows :

REPORT.

The directors of the Canadian Savings and Loan Company have much pleasure in laying before the shareholders their twenty-second annual report and balance sheet for the year ending 31st May, 189..

After paying two half-yearly dividends. at the rate of six per cent. per annum (and income tax thereon), amounting to $45,379.01, interest on borrowed capital and expenses, including directors' fees, salaries, commission on loans, inspection, etc., there remained a net profit of $12,079.31. This sum has been disposed of by applying $5,000 to the reserve fund, and the balance, $7,079.31, to the contingent account.

The reserve fund now amounts to $210,000, being twenty-eight per cent. upon the subscribed capital of the company, and there stands at credit of contingent account $19,048.92, which is considered sufficient to meet any probable losses that may occur.

Repayments of principal and interest on loans have been satisfactory, and the demand for money has been sufficient to absorb all receipts from this source, as well as the increase in savings bank deposits and debentures.

A number of sales of property have been made during the year, and, notwithstanding the continued depression in farm lands, the prices realized were very satisfactory, in some cases exceeding the amount anticipated. The value of real estate now in the hands of the company is $15,500; this includes all properties remaining unsold, which have come into possession of the company by foreclosures or otherwise.

The office building of the company, which has been occupied for over seven years, without any expense in the way of repairs, has been thoroughly renovated during the year, and the office itself by a few alterations and decorating has been beautified and made more convenient for the transaction of business.

Your directors deeply regret to have to record the death, on April 7th last, of Mr. H. W. Blinn, who for over twenty years filled, with great advantage to the company, the position of manager.

During the illness of the late manager, Mr. M. H. Rowland, who has acceptably filled the position of accountant of the company for eighteen years, was appointed assistant manager, and is at present acting as manager.

All of which is respectfully submitted.

ROBERT FOX, President.

M. H. ROWLAND,
Acting Manager.

We hereby certify that we have audited the accounts of the Canadian Savings and Loan Company, of London, Canada, for the year ending May 31st, 1897, and find the same correct in accordance with the statement above set forth. We have carefully examined the vouchers and bank accounts monthly, and have checked all the entries in the company's ledgers. We have also examined the securities of the company and find them in order.

THOMAS A. BROWNE,
A. T. McMAHEN,
Auditors.

London, June 15th, 1897.

The following gentlemen were elected as directors for the ensuing year: Messrs. Robt. Fox, Robt. Lewis, Jno. Christie, Jno. W. Jones, F. Wolferstan Thomas and A. B. Cox.

At a subsequent meeting of the board Mr. Robert Fox was elected president, and Messrs. Robert Lewis and Jno. Christie vice-presidents, and Mr. M. H. Rowland was appointed manager.

Correspondence.

THE MASTER PLUMBERS' ASSOCIATION.

IMPRESSIONS OF A DELEGATE.

Editor Monetary Times.

Sir,—Having been appointed a delegate from our association in an eastern city, to the convention of the master plumbers of Canada, which met in Pythian Hall, Toronto, Dominion Day, July 1st, I cannot allow this the season of my first visit to the Queen City of the West, to pass off without in my humble way expressing thanks to my fellow-craftsmen of Toronto and to her hospitable citizens for their kind and generous treatment of us, in making our stay in their beautiful city one which in years to come will be treasured as one of the brightest periods in our lives. Toronto has the reputation, and from our own observation of it deserves the same, as being an ideal city in which to hold conventions.

There are many associations to meet there during the summer and autumn months, some of which are continental and world-wide in their reputation. There is, for instance, the Epworth League, and there is the British Association for the Advancement of Science, which are to meet in the city in a short time. At the former 30,000 to 40,000 delegates are expected from all parts of America, and at the latter the eminent scientists of the world are to meet together in convention and compare ideas, and mankind at large will be thoroughly benefited and men will rise and call them blessed. Why not, too, the master plumbers, who in a large measure hold the health of the community in their hands ? From the strides which have been made in the science and art of plumbing during the Victorian era, plagues and epidemics of former ages, which were called by many visitations of the wrath of God, are unknown, and well may the public rise as one man and offer to us "the glad hand" that we are enabled by mutual exchange of ideas, to so place the dwellings we live in free from the germs of disease. It is not my intention in this article to go into detail of the many matters which were brought up at the convention, but to simply express my appreciation of the handsome manner in which we were entertained during our stay in the city, and also for the benefit of the many master plumbers of Canada who were unable to be present with us. I have no idea of making them feel badly because of what they missed, and I am sure they will be delighted to hear of the glorious time we had while in Toronto and elsewhere, the guests of the Local Masters' Association.

At the morning session we were welcomed by Ald. Scott on behalf of the Mayor and corporation and citizens, to the city; by Mr. E. Gurney, president of the Board of Trade, and also by Mr. W. G. Burroughs, president of the Local Plumbers' Association, after which we adjourned to the grounds of the Metropolitan church, where we were photographed by Mr. R. Villens, the manager of Joseph Bruce's art studio, who has been successful in producing one of the finest group photographs I ever had the pleasure of looking upon. The business of the committee being concluded on Friday morning, on the kind invitation of Ald. Scott (chairman of the Reception Committee of the Council), accompanied by Ald. Beale, we were invited to a carriage drive by them to view the sights of the city. It took 20 cared by their lady friends. Our first halt riages to contain the delegates, accompaniwas made at the new municipal buildings, Mr. E. J. Lennox, architect, and they are a credit to the city and to the architect who designed them, and will cost about $2,000,000, and I understand that the firm of our new president, Mr. Joseph Wright, of the Bennett & Wright Co., Limited, has the contract for the heating, ventilating, plumbing and electric wiring, amounting in the neighborhood of $200,000, the largest contract of that class of work ever let in the Dominion of Canada. Proceeding along Queen street, up Jarvis street, Gerrard, Sherbourne and Bloor streets, over beautiful asphalt pavements, lined on either side with maple and chestnut trees planted in the boulevards, with their well-watered and carefully-looked-after lawns, there was a sight to impress on our memories that the citizens of Toronto have good reason to be proud of their heritage. We saw that classic building, the University, too, After a drive to the extreme western part of the city we entered the gates of High Park, a large park, containing nearly 200 acres, with beautiful drives in all parts of it, and the large oak and maple trees with their wide-spreading branches; we came to Dufferin street, the works and offices of the Toronto Radiator Company. At the entrance to their offices was a streamer, "Welcome to the Master Plumbers' Association," in very large type, so that it would attract the eye of every visitor. On assembling in the show-rooms, Mr. Adam Taylor, who is acting manager in the absence of his brother, Mr. John Taylor, who is in Europe, extended on behalf of the president and board of directors an invitation to partake of refreshments. After our drive of three hours in the heat, we required no second bidding, and in a very short time we filed into the board-room, where we were served with everything man could desire of the good things to eat and drink, President Lamarche expressed our delight with the reception. The many delegates viewed the various departments of the works and were delighted with all they saw, and with the information that was imparted to them as to the construction of the Safford radiator.

Continuing our drive down Dufferin street to Exhibition Park, where the great Victorian Era Exposition is to be held in September, we were shown the various buildings, and also the conservatories, where the ladies of our party were presented with bouquets of roses, and through the kindness of Mr. Carrick, an inspection of the show-rooms and shops was made, All being satisfied with their pleasant afternoon's drive, returned to their hotels to take a short rest before the banquet. On assembling at Harry Webb's parlors we were received in right royal style by the Entertainment Committee and by a large number of the local master plumbers, where the good hand of fellowship was extended to us. Mr. W. G. Burroughs, president of the Toronto Master Plumbers' Association, occupied the chair, and on his right were seated Mr. Joseph Wright, president of the Provincial Natoinal Association; Dr. P. H. Bryce, secretary of the Provincial Board of Health; and Mr. Curry, vice-president of the Architect Guild. On the left of the chairman were seated Ald. Scott, representing the Mayor; ex-President Lamarche, Mr. E. Gurney, of the Gurney Co.; Harry MacLaren, of Montreal. The first toast on the list, "Her Majesty the Queen," was proposed by the chairman, and responded to by all joining in the singing of the National Anthem. "Canada" was responded to by Dr. Bryce, very ably. "The Mayor and Corporation" was responded to by Ald. Scott, who bid us all a hearty welcome. "Supply Trade of Canada," coupled with the names of Mr. E. Gurney, Mr. Maclaren, and Mr. A. A. McNichol, was the next toast, and was heartily drunk by those present Mr. Gurney, in responding, gave the association good advice, and if they would always do the right thing they had no better friend than himself. Messrs. Maclaren and McNichol also responded. "Local Master Plumbers" was responded to by Mr. Joseph Wright and Mr. J. B. Fitzsimons.

A trip to Niagara Falls had been arranged, so most of the delegates and their friends were in good time Saturday morning at Yonge street wharf, although the banquet on the previous evening was more than some of the delegates could stand, and they were therefore left behind, to take the next steamer at eleven o'clock. The steamer Chippewa soon had the delegates on board, and we made a very pleasant sail across Lake Ontario. During the course of the trip we gathered in little companies and renewed old acquaintances and talked of the treasures in store for us, many taking advantage in cool and quiet spots to get much-needed rest for the fatigues of the day before us. There was written in the past the impressions of those who, for the first time, have gazed upon the great cataract, some being disappointed and others spellbound. As for myself, being of a practical turn of mind, I thought what a vast amount of power was going to waste and of how it might be utilized in driving the wheels of industry. By electric cars we skirt the edge of those beautiful rapids above the Falls in all their turbulent grandeur, passing on to the Dufferin Islands, with their shady nooks and quiet retreats. On our return luncheon was ready.

Our new president, Mr. Joseph Wright, occupied the chair, having on his left ex-President Lamarche, and on his right Mayor Cole, of Niagara Falls, who being a plumber himself, felt quite at home among his fellow-craftsmen. Toasts were proposed and drunk with much enthusiasm. But presently one of the speakers said, "To be in a hall making a speech when so many points of interest were to be seen seems to me 'infamous,'" so a hasty adjournment was made, the members of the Entertainment Committee forming themselves into little parties, to be better enabled to see all that was to be seen. I was fortunate in being invited into the party of Mr. Adam Taylor, of the Toronto Radiator Company, who were to the number of 26 under his guidance. Our first point of interest was the Incline railway, which we descended to the bank of the river below, from which point we embarked on the steamer "Maid of the Mist." Mayor Cole being of our party, introduced us to the captain, who, being in the past a plumber—it beats the mischief how many fellows are or have been plumbers—did his best to make our stay with him as pleasant as possible. We parted singing "Auld Lang Syne."

A curious mishap befell one of the cabs, in which were several eastern men, among them Mr. McLaren, who is said to know the locality of the Falls very well. This particular cab did not adhere to the programme Mr. Wright had laid down, but after a while went off sight-seeing or sight-hunting on its own hook. It did not come back. And as Harry McLaren was the person responsible for its deviation, he was sternly brought to book. However, as he is known to be not only a scientist and chemist, but a good fellow, no one had serious apprehensions as to the ultimate safety of any party escorted by him. Eventually the party in that cab came back, and the other occupants of it told the president that they were almost carried off to Hamilton by Mr. McLaren, who enthusiastically vowed that it was one of the finest towns in Canada. But, of course, discipline had to be maintained.

TIGHT JOINT.

Quebec, 7th July, 1897.

JAPANESE TRADE, TARIFFS AND CURRENCY.

The total value of the foreign trade of Japan for the year 1896 was 289,517,234 yen, exceeding that of the previous year by 24,144,000 yen, the imports having increased 42,414,000 yen, whilst the exports declined 18,270,000 yen. The actual figures for the past year for merchandise and treasure were as follows:

	Merchandise. yen	—Treasure.— Gold. yen	Silver. yen
Imports.	171,674,474	10,217,458	28,924,750
Exports.	117,842,760	1,996,575	9,602,307
Excess of imports.	53,831,714	8,220,883	19,322,443

The silver yen is worth about 65 cents.

The total balance against Japan, taking merchandise and treasure together, amounted to 81,000,000 yen, which may safely be placed as a set-off against an equal portion of the war indemnity received in London from the Chinese.

The increase in imports is largely accounted for by the growth of the following staples: Raw cotton, which increased 8,000,000 yen; cotton yarn, which increased 4,300,000 yen; piece goods, which increased 12,000,000 yen; metals and rails, which increased 5,200,000 yen. The decline in exports is due to raw silk, which fell off 19,000,000 yen.

Of the above trade 204,000,000 yen was conducted by foreign merchants, and 85,000,000 yen by Japanese. The respective figures for the previous year were 193,000,000 yen and 67,000,000 yen. This shows that the Japanese are gradually getting a larger proportion of the trade into their own hands. The transport of the trade still rests very largely with British vessels, for out of a total tonnage last year of 4,071,000 tons, more than one-half, or, say, 2,093,000 tons, was conveyed in British ships. Amongst other foreign vessels, the German ships come next, carrying 366,000 tons, and the Norwegians follow with 288,000 tons.

The trade of last year was distributed amongst the various countries of the world as follows:

	Exports. Yen.	Imports. Yen.
Great Britain	9,012,398	59,251,780
United States	31,532,341	16,373,420
China	13,823,843	21,344,521
Hong Kong	19,965,899	9,133,777
British India	4,537,653	22,517,424
France	19,027,389	7,682,340
Germany	2,972,137	17,183,953
Corea	3,367,693	5,118,925
Belgium	111,467	3,106,094
Switzerland	617,707	2,534,217
Russia	1,910,581	1,416,848
Italy	2,669,106	182,923
Philippine Islands.	187,785	1,804,914
Other countries	8,106,761	4,023,332
Totals.	117,842,760	171,674,4

Great Britain, it will be seen, had far the largest share, the bulk of which was composed of imports, but in 1895 the largest portion belonged to the United States of America, and consisted of imports 9,276,000 yen, and exports 54,028,000 yen. decline will be noticed during 1896 of 21,496,000 yen in exports to America, which is chiefly accounted for by the falling off in the silk trade.

imposed shortly, has lately been published in detail, and proves to have been drawn up more with a view of enhancing revenue than protecting industries, and, as far as can be judged at present, many of the imposts are calculated to injure trade. In the first place, the duties are leviable on the laying down cost of goods, which embraces freight, insurance, commission, and all charges, whereas under the existing regime, under which trade has flourished so well, such duties as obtain are only charged on the original cost of goods. Wines, spirits and tobacco are to be taxed 40 per cent.; most manufactured articles about 25 per cent.; coal, 15 per cent.; piece goods, 15 per cent.; cotton and woollen yarns, 10 per cent.; oil, 10 per cent.; and metals, mostly 10 per cent. In the case of goods upon which the freight and charges amount to as much as, and sometimes more than, the original cost of the goods themselves, the new tariff will weigh very heavily, and probably curtail importation. Take, for instance, the case of Cardiff coal, which is imported almost exclusively for the purpose of supplying foreign men-of-war, Japanese coal being unsuitable. The original cost of this is say, 10s. per ton; but freight and insurance make the laying-down price over 32s., so that 15 per cent. duty on the last cost means practically over 45 per cent. on the original cost. The effect of this will be that foreign men-of-war, unless absolutely obliged to take their supplies here, will coal and provision elsewhere, which means so much less trade for Japan. As Cardiff coal is only imported for purposes for which Japanese coal is unsuitable, it is no protection to tax Cardiff coal. Up to the present time no duty has been imposed upon coal at all, and last year out of a total import of 49,523 tons no less than 49,273 tons came from Great Britain. Surely with freight amounting to 200 per cent., as much as the first cost of the coal itself, Japanese coal is more than sufficiently protected without placing a 15 per cent. duty on the laying-down cost of imports! In the same manner it is no protection to tax kerosense oil and many other commodities which are not produced or manufactured in Japan. The date for putting the new tariff into force has not been fixed yet, as the revised treaty with Austria has still to be concluded, and will no doubt contain, as the treaties of other countries did, a clause to the effect that the new duties shall not be imposed until six months after the treaty has been signed. It may be taken for granted that foreigners will have six months' notice of the change.

A PROPOSED BOUNTY ON EXPORTS OF SILK.

Whilst on the subject of protection it may be well to allude here to a strange measure recently adopted by the Government, under which a certain sum of money is to be set aside annually for seven years for distribution amongst Japanese exporters of silk, by way of bounty, which it is understood will amount to about 5 per cent. on the value of silk so exported, but such bounty will not, of course, be allowed to foreign exporters. Such a measure will surely have the very opposite effect to that which, it is to be hoped, is intended. A bounty to the exporter instead of the producer will injure rather than encourage the silk industry. The measure cannot be otherwise regarded than as a direct blow at the local foreign merchants, who at present, clearly to the great advantage of Japan, control the bulk of the silk export trade. But it is difficult to see how, under the new treaties to come into force in a couple of years, a measure of this kind can possibly remain in force. Article VII. of these treaties runs as follows: "The subjects of each of the high contracting parties shall enjoy in the dominions and possessions of the other exemption from all transit duties and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities and drawbacks." The Yokohama Chamber of Commerce have recently addressed a letter to the United States Minister, the "Doyen" of the Diplomatic Corps in Tokyo, on the subject. This is only one example of the intention of the Japanese to do everything they can to drive foreign merchants out of the country, but it will be an unfortunate day for Japan should their object in this direction be achieved before the ordinary Japanese merchant has attained a higher standard of commercial morality than at present exists.

THE CURRENCY

With regard to the new coinage law, this, as stated in a previous communication to the Economist, is to come into operation on October 1st next. The coinage of the ordinary silver yen is now entirely suspended, and the import of silver bullion into Japan may be said to have practically ceased. The import of gold during the year 1896 exceeded the export by 8,221,000 yen, silver value, and during the two months of this year ending February 28th was in excess 13,166,000 yen, making together 21,387,000 yen. Gold is still being imported—and now on a larger scale than ever—and by the time the new coinage law comes into effect the Government will no doubt be in a position to give their new scheme a fair trial; but unless some protective measure is adopted, it is very certain that gold will soon leave the country again. Evidence of this is already manifest. The intrinsic value of the new gold yen will be 2s. 0.58d.; but to-day the telegraphic transfer value of a silver yen, which is to be exchangeable at par for one gold yen as soon as the new coins are issued, is only 1s. 11 15-16d., which is 2 5-8 per cent. less. If the Government find that gold is likely to be shipped away largely they might possibly protect themselves to some extent under Article XVI. of the new coinage law, which runs as follows: "The silver 1 yen coins already issued shall be gradually exchanged for gold coins, according to the convenience of the Government, at the rate of one gold yen for one silver yen." But such a course would be very injudicious, and would certainly not be in accordance with the spirit of the Act. Above all, at the present time Japan's chief object is to improve her credit in the eyes of foreign countries, and it is not conceivable, therefore, that she would do anything that would be calculated to discredit her currency. Consequently it may be safely assumed that the new scheme will be given a fair trial.—London Economist, June 19th.

BERMUDA AND ITS AFFAIRS.

Bermuda was not over prosperous last year, for it appears from the report of its Governor to the Colonial Secretary that the island's revenue was £34,256 and the expenditure £34,717. This latter sum does not include the Imperial expenditure on naval and military establishments, the latter alone being over £105,000. The total public debt of the colony is £46,000, at an average rate of interest of 4¼ per cent. Bermuda, like more important places, has its agricultural problem. Its area is only 10,000 acres, of which 2,500 are under cultivation in small holdings, and land and labor are both dear. Two companies were formed to aid agricultural interests, but both suffered such losses that they were forced to abandon their operations.

The report contains a statement from "one of the leading planters in the colony," in which the writer says that he farms as much land as any one there, and that his holding is only about twenty-five acres in all, five acres being considered a fair-sized farm. "I consider," says this planter, "that an industrious and intelligent man should clear about £40 per annum from an acre of average land with a fair crop and prices. I personally, in good years, have made about £100 from an acre, principally from lilies." The imports of the island last year amounted to £304,895, of which £184,391 were from the United States, and nearly the whole of the remainder from Great Britain and her colonies. The imports from the United States are chiefly food stuffs, and those from Great Britain manufactured goods. The exports amounted to £101,063, of which more than half were onions, potatoes, and lily bulbs coming next. Nine-tenths of the exports go to the United States. The total population at the end of last year was 15,952, of whom 6,117 are returned as whites, the remainder being colored.—Gazette.

TRAFFIC OF THE SUEZ CANAL.

The annual report of the Suez Canal Company, recently issued, shows a revenue of 76,487,000 francs derived from the passage of 3,409 ships of 8,560,000 tons, while 308,243 passengers yielded 3,082,000 francs, making with accessory receipts, a total of 79,957,000 francs. Of this number of ships 215 used the canal for the first time and 3,211 ships passed through by night by the aid of the electric light. The average transit was 15 hours 53 minutes, or 25 minutes less than in 1895. Petroleum vessels effected 72 transits. The state of Oriental trade is summed up thus: "Great insufficiency of products and raw materials for providing return cargoes, but comparative activity of outward traffic, owing to a good demand for manufactured goods, principally machines and railway materials in the Far East and Australia; 930,000 tons for English consignments alone, against 688,000 in 1895. A falling off in English coal, however, has neutralized the increase on manufactured goods." Of the 3,409 ships, 2,162 were English, 322 German, 230 Italian, 218 French, 200 Dutch, 71 Austrian, 62 Spanish, 47 Russian, 39 Norwegian, 37 Turkish, 7 Portuguese, 2 Egyptian, 1 Belgian and 1 from Sarawak. The military passengers comprised 74,094 Italians, 27,501 Spaniards, 26,692 English, 22,510 Turks, 20,188 French, 11,722 Russians, 10,299 Germans, 4,007 Dutch, 1,371 Portuguese, 91 Chinese, and 45 Japanese. Civilian passengers, 31,057; pilgrims, emigrants, and convicts numbered 78,652.

Commercial.

TORONTO MARKETS.

Toronto, 8th July, 1897.

Dairy Products.—The receipts of butter during the week have been limited, as a result of the very hot weather. Shipment has been almost an impossibility, and the few lots coming forward have arrived in very poor condition. Stocks in this market are, however, sufficient to meet the local demand, and values remain without change. In cheese there has been little local activity. Outside markets are weaker, and values here have declined, in sympathy with lower prices on the cheese boards. For eggs there has been less demand this week. The hot weather serves to diminish the consumptive demand, while an abundance of cheap fruits also operates as a check upon trade.

Grain.—The wheat market has been firm during the week. There has been a good demand for export, while the purchases made by local millers have been considerable. Transactions are made on a basis of 69 to 70c., low freights to Montreal. Canadian crop prospects are good at present. Crop prospects and estimates from foreign markets have been much more favorable on both winter and spring, while they have had fine weather in western Europe, though eastern Europe reports further damage by rains and floods. Oats are in good demand for export, as well as by way of local consumption. Peas have advanced 1c. per bushel, and are scarce, and are wanted at the higher prices. Rye and corn remain nominal.

The stocks in store at Port Arthur on June 26th were 1,602 694 bushels, and there were received 357,652 bushels, and shipped 215,882 bushels, leaving in store on July 3rd, 1,744,464 bushels.

Groceries.—Only a quiet trade is being done. The consumption in the country is light, and orders from retailers are restricted within narrow limits. There is considerable activity in sugars, as the fruit season is now well advanced; values remain without change. Canned goods are firmer. Packers report that in many districts the pack of vegetables must be light, on account of the dry weather. Tomatoes have been advanced from 80 to 85c., and merchants say that the indications point to a quotation of 90c shortly. Corn is firm, and the cheapest brands offering here are quoted at 55c. Values are very steady, and few fluctuations in prices have been reported this week.

Hides and Skins.—There has been an additional appreciation in the value of hides this week. Merchants are now paying 8½c. for green cow hides, and 9c. for steers, 60 to 90 lbs. No transactions in cured hides have been reported since the advance in green hides; but dealers are quoting 9c for cow hides. Advices from the Western States dated July 6th, reported a firm, but quiet market. A small sale of Texas July take-off was reported at 10¼c. The close showed no changes, with native steers at 10 to 10½c., butt brands at 9½ to 9¾c.; Texas, at 10 to 10¼c; 9 to 9¼c for branded cows; 8¾ to 9c. for Coloradoes; 9½c. for heavy native cows, and 10¼c. for light ditto. Lambskins are worth 50c, while for pelts dealers are paying 30c. to butchers. Calfskins are quoted at 11c. per lb. Tallow remains very dull, although values remain unchanged.

Hops.—The market is very quiet. Traders report few transactions, although there have been some enquiries from brewers recently. Stocks of good Canadian hops are not excessive, but there is an abundance of inferior grades. Merchants are asking 12c. for the best Canadian hops, with sales of inferior at considerable reductions. No interesting news has been received as to the condition of the growing crop in Ontario. The acreage is thought to be about the same as last year. From the Pacific coast states, reports are received as to damage to the plant by lice. The German growers have had favorable weather, and report favorable prospects.

Leather.—Trade remains quiet, and the demand from the manufacturers for supplies for the new season is not at all general yet. The advance in hides has caused some considerable stir in leather circles, and tanners will no doubt make a vigorous effort to secure an advance in the price of their product. *Hide and Leather*, July 3rd, says: "The feature of the week was the firmer feeling in leather values. Higher prices were asked, and in some instances paid Still it cannot be said that leather is appreciably dearer. Veteran leather merchants and manufacturers talk much more strongly, and are in no mood to allow concessions, but they are apparently still willing to accept limited orders for their goods at rates that have ruled for the past few months."

Provisions.—Activity and firm prices characterize all the different lines of hog products, with the exception of lard, which remains dull and low in value. Stocks of products are being rapidly exhausted, and merchants claim that a higher range of values must rule before the season has closed. The *N.Y. Journal and Bulletin*, July 5th, says: "Provisions have been active, unsettled, but generally stronger again the past week, with a broadening, speculative market, and more frequent and wider fluctuations, with some appearance of manipulation in the speculative articles at Chicago, indicating a more general interest on the part of packers, with considerabie outside buying, believing that present prices are too low to remain Yet, singularly enough, the spot markets have still failed utterly to follow the option markets, notwithstanding there have been steadily increasing strength and activity in the latter for nearly a month. Prices of meats at the West are easier by ⅛c. to ¼c. now than they were a month ago, in spite of reports sent out in the interest of the bull packers that there is a good cash demand."

Wool.—The whole interest of the market is centred in the action or inaction of Congress. When it was found that the Dingley Bill did not become law July 1st, merchants who had ceased their export shipments, commenced the trade again, and good merchantable fleece, which had declined to 17c., advanced again to 20c. per lb., and during the week 20½c. has been paid for several lots. The Boston *Commercial Bulletin* will say to-morrow of the wool market: "The bottom of the wool market was reached in August, 1893, just before the Vermont election. At that time fine staple Wyoming wool was sold in the Boston market at 35c. the scoured pound. This week fine Idaho staple has been sold in Boston on a basis of 43c. the scoured pound, an advance of 13c. the scoured pound. This price and other prices that have risen to correspond mark the highest level reached since July, 1896. Growers in Montana are getting 12c a pound for wool. A year ago they were shipping wool on consignment, with no advances but of cost of freight."

MONTREAL MARKETS.

Montreal, 7th July, 1897.

Ashes.—Some few small shipments are reported last week, but the general demand is still very limited, and there has been no revival in prices We quote first quality of pots $2 to 2.05; seconds, $2.75 to 2 80; pearls nominal at about $4.25 to 4.30 per cental.

Cements and Firebricks.—Receipts of cements for week ending to-day are light, only 1,000 barrels of English, as against 500 English and 4,200 barrels Belgian last week. A sale of 500 barrels of Belgian was reported a few days ago at $1.87, and a fair aggregate of business is being done in moderate lots. We quote $1.90 to 2.00 for Belgian; English, $2 to 2.10. Receipts of firebricks for week 186,0 0: quotations remain at $15 to 21.00 per M.

Dairy Products.—The cheese market has undergone notable decline since last report. The cable quotation yesterday is sixpence lower, and there is about a half cent difference in local prices. Fine Ontario makes are now quoted at 7¾ to 8c., and Quebec makes 7½ to 7¾c. per lb. Butter rules firm under steady demand and freer shipments. We quote choice creamery 17 to 17½c.; Townships dairy, 14 to 15c.; Western ditto, 12 to 13c. per lb. For eggs the market is firmer at 10 to 11c. per dozen for selected stock. The cheese exports last week were 64,524 boxes, about 2,000 boxes short of the same week last year, but the total for the season at date is still some 85,000 boxes ahead of the same period of 1896. Butter shipments for the week were 6,522 pkgs., figures much ahead of the week in 1896.

Furs.—Circular advices anent the June fur sales in London are to hand, and results are given as follows: Coon sold 5 per cent. lower than last March; otter, 10 per cent. lower; wolf, 20 per cent. lower; wolverine same as last March; red fox, 5 to 10 per cent. higher; bear, 20 per cent. higher than March for fine skins, owing to small offerings; marten, 2½ per cent. higher; mink, 15 per cent. lower; possum, same as last March; spring rats, 15 per cent. lower than January; fall ditto, 5 per cent. higher than January; winter and black rats, same as January; beaver, 5 per cent. higher than January, and skunk 12½ per cent. lower than January.

Groceries.—The demand for sugars shows further gradual improvement, and refiners are now reporting some fair sales of granulated, and have been selling yellows pretty freely for several weeks past. The level of the market remains just as was fixed a fortnight ago, factory prices for granulated, in lots, being 4c., and yellows 3¼ to 3¾c. per lb. There are some moderate lots of Austrian and German refined beet sugars being brought in, principally by wholesale confectioners, who say the quality suits them almost better for boiling purposes than the domestic article, and the cost is stated at about $3 60, duty paid, per hundred. This imported sugar comes in bags of 224 lbs., and the style of package is somewhat unsuited to general grocery purposes. A leading French jobbing house is stated to have placed a fair order, however, and there is some now unloading in the harbor. Teas continue somewhat quiet; supplies of new Japan teas will be more liberal shortly; one leading commission house reports a consignment of some 1,500 packages about due, value ranging 16 to 20c., and other fair lots will be to hand in a few days for other houses. Indians and China teas seem neglected. Advices from Mediterranean points report the crop of currants, raisins, etc., as looking well generally, and opening prices are expected to rule fairly low, but no quotations have yet been made. New Valencias are expected to arrive here rather earlier than usual, probably about the end of August. New pack of salmon are now quoted down to $3 50 per case for standard brands, on the coast, a figure a full dollar lower than last year.

Hides.—Beef hides have declined a full cent on the local market since last report, and are being bought by dealers on the basis of 7c. for No. 1, and the demand from tanners is rather more active as a consequence, with stocks well cleaned down. Lambskins and clips are now quoted at 25c.; calfskins, 8 and 6c. for Nos. 1 and 2 respectively.

Leather.—Such buying as is being done is only in small lots, and no improvement in business can yet be noted. As before reported local shoe manufacturers find fall orders slow in coming in, and Quebec houses are also reported to be not very actively employed, as shoe jobbers are reported to be holding back orders in hopes of getting lower prices. Leather values continue steady, and as yet do not appear to be affected by this week's decline in hides. Stocks are by no means heavy, and of light slaughter sole supplies are really small. We quote:— Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.

METALS AND HARDWARE.—The heated spell has evidently not been conducive to activity in these lines, and we do not hear of any important business doing. English advices indicate some stiffening in the market for Canada and tin plates, but local quotations are unaltered, and 52-sheet Canada's are still offered, to arrive, at $2 10 in lots. Terne plates are quoted at $5.50 for importation; but local stocks are low at the moment, and $5.90 to $6 is still asked for jobbing lots. In pig iron there is nothing new; some holders of Summerlee iron are asking $17.50 to 18 50 for small lots *ex*-store. Lead is notably firmer, and $3.36 is now quoted as the lowest figure for lots. We quote:—Summerlee pig iron, $17 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16 25; Ayrsome, No. 1, $16.50; No 3, $16; Shotts, $17 25 to 17.50; Carnbroe, $17.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13 00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2 15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2 15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3 90 to 4.00; P. D. Crown, I C, $3 60 to 3.75; do, I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1 80 to 2 00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 35 to 3 50; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1 90; round machinery steel $2 25; ingot tin, 16 to 16½c. for L. & F; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.60 to 4.75; antimony, 8½ to 9c.

OILS, PAINTS AND GLASS.—Business in these lines has assumed a very quiet phase, its usual mid-summer character, and we do not hear of a single change in quotations. There is a reported difficulty in getting supplies of dry lead from European corroders, who are said to be very full of orders. We quote:—Turpentine, one to four brls., 42c.; five to nine barrels., 41c., net 30 days. Linseed oil, raw, one to four brls., 42c.; five to nine brls, 41c.; boiled, one to four barrels, 45c.; five to nine brls. 44c., net 30 days; olive oil, machinery, 90c.; Nfld cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½; No. 2, $4.25; No. 3, $3 87½; No. 4, $3.50; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4¼c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 13½c. in bulk; packages, 14½c.. window glass, $1.25 per 50 feet for first break; $1 35 for second break; third break, $2.80.

WOOL.—Within the last week or so there have been quite a few fair sales of Cape woo—being a part of the two cargoes for some time in store in New York aggregating, probably, 400 to 500 bales at good prices, averaging 14½ to 15c., and the market is decidedly firmer at 15 to 16½c. There are no Australians here, and quite a moderate supply of B.A.'s at 30 to 33c. Most of the little quantity of domestic wool marketed here has gone to the U.S.

Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.
Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

HEAD OFFICE:
Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 18°5, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.

COLONIAL JUBILEE.

Last night's Colonial Institute banquet in London was one of a half a dozen or more imposing Jubilee demonstrations already made with special reference to the British colonies. The names of the colonies and their Prime Ministers appear, indeed, more frequently on the Jubilee programme than do any others, so that it might almost be deemed a colonial jubilee. This is eminently fitting. For apart from their supreme importance to the Empire, the colonies have another most potent claim upon attention at this time. That is the historical one. They are the creation of the Victorian reign. in the Elizabethan era the foundations of the Colonial Empire where laid, but these were largely destroyed in the disastrous Georgian era.

It was reserved for the Victorian reign to relay them broader and deeper than before and to erect thereon the present stately edifice; so that at the great Queen's Jubilee there followed in her train the Ministers of eleven free, self-governing States, all beneath the St. George's cross and owning unfaltering fealty to Victoria, their Sovereign. The creation of those States has been one of the greatest works and greatest glories of these sixty years. When the North American colonies were federated into the Dominion of Canada there was a widespread feeling that that was a prelude to impending secession. That was thirty years ago. · Today the Prime Minister of the Dominion, the leader of a party that was suspected of separatist tendencies, and of a race that sixty years ago revolted against British rule, makes himself conspicuous by his stalwart loyalty. If Sir Wilfrid Laurier is a rank Imperialist, who shall question the adherence of Canada to the British Crown ?—New York Tribune, July 3rd.

TREASURE SUNK IN THE LAKES.

When one thinks of the wrecks upon the great lakes which he has heard of or read of during the last thirty years, he may be excused for believing in the likelihood of very considerable treasure, of one kind and another, lying in the depths of these immense bodies of water which vary in depth from 60 to 600 feet. And when he learns that in this very month of July a company has divers and other men at work in Mahone Bay, on the south-west coast of Nova Scotia, searching the waves and caves of Old Ocean for treasure concealed by Captain Kidd a century or more ago, he may with less surprise hear that there are folk who would like to explore Lake Erie and Lake Michigan for a similar purpose. Some one or more of these had been talking last month, says the Detroit Free Press, to a well-known diver named John S. Quinn, who has searched the depths of American waters, both salt and fresh. But John did not offer much encouragement in the premises.

"This hunting for treasure hidden away in the bottoms of the lakes makes me tired," remarked Quinn. To my knowledge there is no treasure hidden anywhere, unless it be the very solid and weighty cargo that sank when the boat went down. Diamonds, dollars and other choice things are popularly supposed to be submerged at various depths in the various lakes. Let the visionary try for them. I want none of it."

Then the diver went on to tell of the various wrecks that had come under his personal knowledge—wrecks with untold wealth in their bottoms, on which thousands of dollars and thousands of hours of planning and worry had been spent—for nothing. One of these was the "Cumberlond," sunk in the Hamptor roads by the Confederate "Merrimac," just prior to the famous scrap with the "Monitor." A man with more money than sense came to the conclusion, with the assistance of mental acrobats, that her safe contained several thousand dollars—wealth captured from prizes, perhaps. He paid the cost of fitting up an expedition, which was $6,000, and then he paid as much for the safe. It was found without much trouble. It contained just 76 cents.

About twenty-five years ago Quinn was engaged by George Ramsdell, a liquor dealer, of Detroit, to go down to the wreck of the little brig "Neptune," sunk off Little Point au Sable, Lake Michigan. The "Neptune" was one of a fleet of small ones—average tonnage about 150—which ran between Erie and Chicago, carrying miscellaneous freight. She was bound down in November, seventy-six years ago, when she ran into a heavy gale off that point, and foundered close to the shore. Ramsdell had heard she was loaded with rum, a barrel of which floated ashore, he said.

"By jove," he would exclaim, "look at the chance I will have to make money out of that cargo. Rum, sixty years old. Why, it will be worth its weight in gold, and more, too. Everybody will be willing to pay a big price to drink rum of that age. And look at the advertising it will give my business."

Ramsdell was sure he would succeed. So Quinn fitted up an expedition and went to the wreck. He found it in time, in nine feet of water, with all the hull submerged in the washed-up sand except three feet of her rail. Quinn had orders to go ahead and dig through the sand, when he received word that he had been given a contract to sink cribs for the Government in Fairport, Lake Erie. So he quit the rum hunting and took the other job. As coincidence would have it, at Erie he fell in with an old and odd character, named Webster by his parents, nicknamed "Peg-Leg" by his associates. To him Quinn related the "Neptune" incident.

"Why, darn it all, I was mate on that brig," was "Peg-Leg's" first exclamation. "I'll tell you all about her. She had just three barrels of rum in her cargo. She went down nose first, and another man and myself were the only ones saved. We both were washed ashore. There we lay for some hours before help came." And so on at great length. But we shall not print the rest of the recital, although the Free Press does. Our readers would have difficulty in crediting it.

THE RUSSIAN EMPIRE.

We do not always realize how enormous a country Russia is or how many millions of Russians there are in the world. For the first time in history a general census has been taken of the population of the Russian Empire, which is shown to number 129,211,113, of which total 64,616,280 are males and 64,594,833 females. M. Karel, United States Consul-General at St. Petersburg, who transmits the figures to the State Department at Washington, says they show that in forty-five years the population of Russia has doubled, and during the last twelve years it has increased 20 per cent. It took three months to get this census taken, and 150,000 persons were employed in taking it.

INCREASE IN SUICIDE—HOW ACCOUNTED FOR.

At the recent convention of Mutual Life underwriters at Saratoga, a paper on the above subject was read by L. G. Fouse, president of the Fidelity Mutual Life of Philadelphia. The following extracts will show its general trend :

At the recent meeting of the Supreme Council of the Royal Arcanum a report was made by the Committee on Suicides, which shows that in 1890 one in every 3,096 suicided, with a gradual increase until in 1896 one in every 2,439 suicided, being an increase in six years of 26.93 per cent.

The suicide statistics of the American Legion of Honour, compiled in 1891, show that out of six thousand deaths one hundred and seventy-five were suicides, or about three per cent. One hundred and twenty-five of this number had been members of the order less than five years. The total amount paid to the beneficiaries of the suicides was $550,000, while the fraternity received in dues and assessments $21,728.

In the sixteenth annual report of this convention a table will be found, which was carefully compiled and which shows that 2.16 per cent. of all the deaths were caused by suicide, 2,775 by accident (unclassified), excluding railroad, falls, and other undoubted cases of accident; .909 by poison (accidental); .723 by shooting(accidental).

When a policy of insurance contains a suicide clause, the death, although unquestionably due to suicide, is invariably reported as accidental. We would not be wide from the mark in assuming that one half of the deaths presumably caused by accidental shooting, poisoning, etc., are, in fact, caused by suicide. If this assumption be true, then among insured lives 4.36 of the deaths are due to suicide. (See page 196 of the proceedings of the sixteenth annual convention).

The six New England States make registry of marriages, divorces, births and deaths, compulsory, and the statistics may, therefore, be relied upon as being correct. A summary of the "Vital Statistics" of the New England States for the year 1892, compiled from official record, and published by Damrell & Upham, of Boston, shows that 520 deaths from suicide were registered, and that the percentage of deaths to the total number of deaths from this cause was 1.06.

Taking the record of suicides in the New England States among the general population, and comparing the same with the record of suicides among the insured lives, as shown by the report of our sixteenth annual convention, already referred to, we find the number of suicides among insured lives is from two to four times greater than among the general population. This is, no doubt, due to the fact that men who committed crime, and were liable to punishment, preferred to face death rather than punishment and disgrace, when by doing so their families would be well provided for through insurance.

Is it just and fair that honest policyholders, because of a maudlin public sentiment, should be compelled to reward criminals or their families for committing crime ? A man has no more right to insure his life, and destroy it for the profit and advantage of others, even though they be wife and children, than he has to commit arson for his own benefit.

A NEW RAILWAY APPLIANCE.

Assistant Superintendent Given, of the Rock Island, thus describes a new and peculiar track appliance which he recently discovered, as follows : "Crossing the Milwaukee track I was puzzled to notice several strands of barb wire neatly tacked down to the ties and extending across between the rails. Noticing the section boss and his men at work a short distance away, I made bold to ask the purpose of the wire. Looking up at me with a face the picture of an animated interrogation mark, he asked : 'Air yez wan of thim bicycle divils ?' I denied the insinuation, when, his suspicion removed, he said : 'I've been bothered to dith wid the bicycle divils, them spalpeens on wheels, laivn' the roads at the crossings and ridin' down the thrack. The middle av the roadbed, as ye see, is raised high in the cinter and makes a noice path for the wheels. Well, the riders would jest take to the track and tree times me and me min have been run into and knocked down while at work by these fellows. I put me wits to worruk and the idea of stringing barb wires across the ties between the rails struck me as a good wan. That's what it's fur, and we haven't been bothered since I put it down."—Railway Review.

50 YEARS The Year 1897 is the SEMI-CENTENNIAL

OF THE

Canada Life Assurance Company.

DECISIONS IN COMMERCIAL LAW.

BELL v. OTTAWA TRUST AND DEPOSIT CO.—Appeal by the Union Bank of Canada: creditors who had proved a claim against the estate of Peter McRae, in administration proceedings, from the certificate of the local master at Ottawa certifying his finding that the security on the estate of a third party for whom the estate of Peter McRae was only indirectly or secondarily liable, and his direction that the security should be valued. Certain timber limits, the property of the firm of McRae Bros. & Co., were assigned to them by the bank as collateral security for the payment of certain promissory notes and any renewals or part renewals thereof. The promissory notes upon which the bank's claim against the estate was based were renewals and part renewals of the original notes. Peter McRae, when he individually signed the notes in question as one of the makers thereof, was a member of the firm of McRae Bros. & Co., and it was not questioned that as to his estate the firm were third parties. There was a deficiency of assets in the estate of Peter McRae to meet the claims of creditors. The Act respecting estates of insolvent deceased persons, provides as follows: "On the administration of the estate of a deceased person, in case of a deficiency of assets, every creditor in proving his claim shall state whether he holds any security for his claim or any part thereof, and shall give full particulars of the same, and if such security is on the estate of a deceased debtor or on the estate of a third party for whom the estate of the deceased debtor is only indirectly or secondarily liable, the creditor so proving his claim shall put a specified value on such security." McMahon, J., held that Peter McRae, as a maker of the notes, was primarily liable to the bank thereon, and his estate did not come within the Act as being indirectly or secondarily liable, and the bank was not, therefore, obliged to value their securities when filing their claim against the estate. The Master found that, as between the individual partners and the firm, Peter McRae was an accommodation maker of notes, and it was by regarding the position, rights and liabilities of the makers of the notes *inter se*, that the confusion arose.

SAULTS v. EAKET.—The plaintiff sued to recover the price of a binder supplied to the defendant. The plaintiff had a verdict and the defendant appealed. The plaintiff sued upon a written order signed by the defendant, by which he authorized the plaintiff to ship him a Deering binder, for which he agreed to pay $130. That the binder was delivered was not denied. But the defendant asserted that the agreement was that if the machine did not work to his satisfaction, he need not keep it; and alleged that it did not work to his satisfaction, and he returned it. The plaintiff's agent stated that he made a further condition after the agreement, that the machine was to do good work, and if it did not work to his satisfaction, the defendant was to put it out on the road, and the agent would get it. The full Court of Queen's Bench, Manitoba, held that the appeal must be dismissed with costs. Upon the evidence it must be held that the condition relied upon by the defendant was made after the order was signed, and was an agreement made entirely without consideration. The condition sought to be incorporated with the agreement was inconsistent with the written agreement and varied it most materially. If the conversation about the defendant not keeping the machine took place and the condition was made before the signing of the order, the defendant relying on it, was seeking to vary by parol a written agreement.

Mercantile Summary.

A BRIEF business career has been that of H. C. Martin, hardware, Kingston, Ont, a young man, who after several years clerking experience began for himself only last fall.

N. E. SEDERQUEST, furniture dealer, St. Stephen, N.B., is reported failed. He has only been in business a year, and was previously a foreman in a furniture factory. He gave a bill of sale for $2,849 within a fortnight or so.

THE embarrassment is reported of George McGarry, Montreal, a curer of hams and bacon, and general dealer in provisions. He has been over-liberal in the matter of credit, and has been evidently cramped financially for some time past. He will lay his affairs before creditors shortly.

AT Alberton, P.E.I., J. Skerry, dealing in groceries, stationery, etc., has become insolvent. He was burned out last December, with only $600 insurance, and his loss could not be readily calculated, as he kept no books of any kind. He has assigned, giving a bill of sale on lobster factory, etc., for $800, before doing so.

A CHANGE has taken place in the important sole leather tanning firm of Shaw Bros. & Cassils, whose headquarters are at Montreal, but who have also a business in Quebec, and several large tanneries in different parts of the Dominion. Mr. Henry B. Cassils has been admitted to an interest in the business, dating from June 30th last.

COLLECTOR of Customs Milne at Victoria, B.C., has been advised that the British ambassador at St. Petersburg is pressing the claims of the sealing schooners "Willie McGowan" and "Ariel," and an early settlement is looked forward to in the matter, as it is understood that a Russian commission has decided that the schooners were illegally seized, and that the owners and crew are entitled to compensation. The vessels named were of the sealing fleet sailing from Victoria in 1892, and both vessels were seized during the month of July in that year, within ten days of each other, by the Russian cruiser "Zabiaka," on the charge of being within the three-mile limit from the Copper Islands.

THE assignment on demand is reported of Renfret & Marcotte, wholesalers in small wares and fancy goods, Quebec, Irenee Marcotte being the only proprietor. The liabilities are put at about $25,000, of which some $17,000 is said to be due to a friend, who aided Mr. Marcotte with money as well as endorsations.——Other failures are reported from the ancient capital, as follows: P. C. Dauteuil, clothier, has assigned, owing about $12,000 direct, and $1,800 indirect, with assets nominally $15,000. Mr. D. was once unsuccessful in the dry goods trade, and later a broker and assignee ——Mrs. L. P. Vallee, milliner, has assigned on the demand of Messrs. Caverhill, Kissock & Co., Montreal, and owes about $4,000, showing assets the same.——Joseph Magnan, shoes, who has carried on a retail business the past ten years, having married Mrs. F. Demers, the former proprietor of the business, whom he had assisted to secure a compromise, has also assigned.

Two Nova Scotia failures are reported as follows: J. J. Campbell, for over 25 years in the grocery business at Glace Bay, has had to assign. Two years ago he built a big hotel property, at an estimated cost of about $10,000, and has been cramped in consequence ever since.——A failure which is exciting a good deal of comment is that of B. Whitehouse, dealer in dry goods, etc., Yarmouth, who is seeking a compromise. He has apparently made "unfriends" of the other merchants of the town, by his peculiar business methods, and they have signed a round-robin addressed to his creditors, asking that a composition be not granted to him, as it would be an injustice to other legitimate merchants who calculate to pay their debts in full. Whitehouse first started business some few years ago in a peddling way, and supplying other Hebrew peddlers, but eventually worked up quite a regular retail business, getting the name of cutting prices, etc. His liabilities are estimated at $13,000, and he is reported to have preferred a Montreal co-religionist very recently.

"THE first corporation which has deliberately undertaken to treat money-making as an applied science" has gone out of business. It began in New York, in 1895, as the Monetary Trust, and in its advertisements, as quoted above, announced its readiness to speculate for customers on "scientific" principles. The scheme does not seem to have produced a favorable impression, says the *Shipping List*, for the Stock Exchange took exception to the methods employed. On Thursday last, the Monetary Trust threw up the sponge, and announced its intention to withdraw from business, and from existence also. As an experiment in "applied science" it was not a success.

IT is not so many years since the letters "CHIMO," spoken, or written or yelled upon the field, caused a flutter in the hearts of hundreds, perhaps thousands, of Torontonians, for this curious word was the club cry of a pet organization, the Toronto Lacrosse Club. In the seventies and in the eighties this body of athletes, or at least the first twelve of them, did a great deal for the national sport of Canada. They played the game with a skill and in a spirit that attracted delighted crowds; and they made the body they represented the equals of those hitherto unbeaten clubs, the Montreals and the Shamrocks. For some years past the game has languished in Toronto and the club has not shown its wonted form. Now, however, a strong and effective committee has been formed, and a really good team of players secured. We are likely, therefore, soon again to witness the attractions of genuine lacrosse played with old-time vigor. This being the case and the opposing teams being worthy ones, the club, we venture to predict, will not lack either members on its roll or crowds on its Rosedale field.

IT was not all blow on the part of the reckless Westerner who said to the writer a few years ago at Revelstoke: "Why, gosh all Christmas! stranger, there's silver and gold *any wheres* within a thousan' mile from here." The people around Calgary are finding gold, according to the *Herald*, which says: "Prospectors in the Calgary district are daily increasing both in number and activity. The latest discoveries are on the Elbow River. Not only has gold been washed out of the river gravel at Weasel Head crossing by the ordinary panning process, but quantities of black sand similar to that which is causing such excitement on the Saskatchewan, have been taken out. One assay of $26 has been taken from Elbow River gravel, and old prospectors are of the opinion that the river is destined to produce large quantities of the precious metal. Fresh strikes are also reported from Sheep Creek, south of Calgary. Samples of stephanite, or black silver, have been brought in from the south fork, and the native silver is visible in small globules when the samples are subjected to the blow pipe."

Mercantile Summarv.

A Board of Trade and a grist mill are two things needed in Carberry, Man., according to the *Express*, to put new life into the trade of the village.

The fires went out in the small tank at the Sydenham Glass Works, Wallaceburg, at midnight, one day last week, and the factory has closed down until September 1st.

The Intercolonial Railway employees are said to be very much exercised over a circular letter issued to them, by General Manager Pottinger, notifying them, by order of the Railway Department, that they must hereafter pay their legitimate debts or leave the service. This sort of notice ought not to disturb the average honest man.

We have seen a press telegram, dated at the city of Mexico on July 8th, announcing the arrival at that city of Edmund E. Sheppard, commissioner from Canada to Mexico, and stating that a Canadian colony has been started on the Isthmus of Tehuantepec. "Que diable allont ils faire dans cette galere?"

What may be termed a lesson in patriotism is contained in what was said by Hon. H. J. Hollister, of Michigan, in his address before the Congress of Charities and Correction in Toronto the other day. Referring in terms of eulogy to the Dominion, he said: "If I was a Canadian, I'd stay a Canadian." The sentiment was applauded to the echo by the great audience.

Mr. C. A. Duff-Miller, who has recently been appointed agent-general for New Brunswick in London, comes in for a good word from the London *Echo*. That journal says that Mr. Duff-Miller has for a long time been prominently connected with the commercial and public life of his province, and owing to his energy the resources of New Brunswick are being brought to the notice of the English public more conspicuously than ever.

Mr. Massana Maera, of Tokio, has been appointed a special commissioner from Japan to visit Ottawa and deal with the matter of trade relations between the two countries. It is said that the Japanese Government is likely to lay claim to the treatment accorded under the preferential tariff, on the ground that the Japanese tariff is on the whole lower than our own. Mr. Maera is going to Ottawa to see the Government about that and other matters.

A Montreal letter tells us that by the published returns the immigration arrivals for June at that city included 2,374 Galicians, 113 English, 78 Germans, 78 Scandinavians, 87 French, 48 United States citizens, and 13 Irish, with smaller numbers from some other countries. The total was 2,842. Among these were 716 farmers, 137 farm laborers, 19 female servants and 16 clerks. In Manitoba 2,290 have settled, 526 in the North-West Territories, 25 in British Columbia, while but one went to the United States.

A letter from Montreal, announcing the death of J. J. Lanning, who succeeded Mr. Charles Percy as assistant general manager of the Grand Trunk Railway, was received too late for last issue Almost thirty years ago he entered the Grand Trunk service, and by conscientious industry passed through various grades till he reached a high position. He was a deservedly popular official. Mr. Lanning had completed a history of the Grand Trunk system, which will be added to the official historical records of the company.

The discovery of coal at Maccan, N.S., between Springhill and Amherst, is described by the Springhill *News* of late dates. An area owned by Messrs. S. H. Holmes and J. A. Johnson, of Halifax, has been prospected by N. E. Charman, of Joggins; J. L. McKinnon and U. J. Weatherbee, of Springhill, who, after boring and searching since 25th May, discovered three workable seams, ranging from two feet six inches to five feet in thickness. The coal is said by the *News* to be a very superior hard coal, perfectly clean and easily mined.

Some parties were arrested a week ago at Stoneham, near Quebec city, for making illicit whisky. They had a somewhat extensive establishment in the northern parish for their business. Having built a large house in the bush, quite a distance from the settlement, they would have become prosperous in time, but they quarrelled over the division of the profits, and one of the partners turned informer. There were five stills on the place, and vats of 1,000 gallons capacity, and they were making fifty gallons of the stuff a day, when the revenue officers got wind of their enterprise.

A Nova Scotian victory is chronicled in a June issue of the French journal, *Le Laillier Modere:* "The cutters' exchange of Paris, June 1—the literary committee—awarded their prizes for the best essay on gentlemen's garments open to all competitors. The winner of the first prize was J. E. Urquhart, of Canada. His work was highly appreciable beyond that of his opponents for his artistic ability and penmanship." Mr. Urquhart is a Pictou boy, according to the Halifax *Chronicle*, a bright and popular young cutter, who has distinguished himself among his sartorial friends. He is at present in charge of a tailoring establishment in Sydney, C.B.

Charters of sea-going ships this week include, according to Halifax and St. John advices, the ship "J. V. Troop" from New York to Port Elizabeth, S.A., with a general cargo, at or about 19s.; barques, "Albania," from Sabine Pass to Buenos Ayres, with lumber at $12; "Astrakana," from Puget Sound or Burrard Inlet to U. K. or continent, lumber, at 57s. 6d.; barquentine "Peerless," Baie des Chaleurs to New York, railway sleepers, 13 cents; S.S. "Wastewater," from Pugwash, N S., to west coast, England, deals, 42s. 6d.; S.S. "Elfrida," Musquash to W. C. E., deals, 42s. 6d.; S.S. "Strathmore," St. John, N.B., to W. C. E., deals, at 40 shillings.

Word comes from Moncton that two considerable seizures were made last week in Albert county, New Brunswick, by customs officers. Information was received that an iron clipper from Greenock, Scotland, had sold a quantity of stores to different parties in Alma parish. An officer arriving, learned that the ship had sailed, but found a quantity of sugar, molasses and peas had been loaded from the vessel, which had laid in the stream, and been taken ashore in the Albert county schooner "Silent." The latter was seized and her owners paid promptly a fine of $400. Thus the way of the smuggler is (sometimes) hard. At Herring Cove, a few miles further on, a subordinate official found a quantity of sugar and molasses, which had been brought ashore in a large boat by another officer. Having made the seizure, the officer went away for a cart, and when he returned the barrels of sugar and molasses had disappeared. This added a criminal offence to a customs violation. The seizure of the boat was then ordered and $50 demanded. Those who took the goods will be arrested. The Greenock steamer lay between the two customs jurisdictions, and a double fine of $800 will be imposed. The owners in Scotland are being notified, as the vessel has sailed.

Mercantile Summary.

BLACK caterpillars are said to be ravaging the forests at Chicoutimi, Que.

GALT has just let a second contract for granolithic walk, this time for 11,000 square feet.

CHATHAM has decided to spend $14,000 on an electric street lighting plant, the Thomson Electric Light Company, of Hamilton, securing the contract.

SOME 1,500 lbs. of sugar beet seed have been distributed among farmers in the Owen Sound district. The object is to extend the beet sugar industry of the Dominion.

THE new elevator at Owen Sound is ascending towards the clouds at the rate of eight feet per day; 170 men are employed, and 100,000 feet lumber a day is being used.

THE waterworks by-law was carried by Fort William last Friday by 119 of a majority. Every ward gave a majority. The election of three commissioners to look after building the works will take place next.

ENTRIES for the Winnipeg Industrial Fair exceed in number by 50 per cent. those of any previous fair in that city. The exhibits are expected to be pretty well in order by to-morrow. The opening as we have elsewhere noted, takes place on Monday.

BURGLARS have been busy for a week or two in various parts of Huron county. One gang at Exeter robbed a show-case of Bishop's hardware store, and got off with some plunder. Another gang tried to get into McKay's hardware store in Brussels, but failed.

THE Canadian Pacific Railway steamship "Empress of Japan" has broken all records for fast time in her last passage across the Pacific Ocean from Vancouver, B.C., to Yokohama, Japan. Deducting the difference in time during the trip, the actual running time was 10 days, 3 hours and 44 minutes. The ship left Victoria at 10.20 a.m. on June 26th, and Vancouver at 4.15 p.m. the same day, and arrived at Yokohama at 1.30 p.m. on July 7th. The distance is 4,217 miles, and the average speed was 17.3 knots an hour.

A NEW steamer of 700 tons, named the "Prince Edward," and a sister ship, the "Prince Rupert," have been built in England for the Dominion Atlantic Railway, at a cost of $200,000. It is not yet known by anyone outside the company where this new boat is to ply. But the Digby, N.S., *Courier* hears that she will coast in the Bay of Fundy. Another says she is for the Boston route, which would seem to be confirmed by the recent purchase of a wharf property in Yarmouth. "But a Boston-Digby route would, however, be an excellent move, and one which some day must come."

A NOVA SCOTIA lumberman, Mr. Frank Davison, of the firm E. D. Davison & Sons, Bridgewater, thus speaks his mind to the Chicago *Lumberman*: "We are thankful to be out of the region dependent on the American market, as your own production seems to be fully able to supply the demand, and there is sound argument in favor of a duty on Canadian lumber, while your lumbermen have to pay such high duties on all they consume. The British markets are now advertising free trade, and we hope some day your people may realize that if free trade is the thing for the United States it is a good thing for the whole continent, and that your Chinese principle of exclusion is behind the times. We are running full time at present, cutting 150,000 feet a day, and have all we can do to fill the contracts now made with foreign customers."

Mercantile Summary.

Mr. G. A. Deadman, the noted bee raiser, of Brussels, reports fair prospects for a good honey yield with plenty of swarms. The largest number in one day has been fifteen. He has now over 250 colonies, or upwards of five million bees.

In addition to the steamers it already has on the Columbia River, the C.P.R. is building an express boat at Nakusp for carrying passengers, mail and express. She is expected to make the time from Trail to Arrowhead in 24 hours, equal to 19 miles an hour. The boat will be christened "The Flyer."

An English steamer, the "Mercedes," recently loaded 1,900 tons of pulp for Manchester, England, at Port Medway, N.S. This is the first shipment from that place direct to England. Port Medway boasts good storage, ample wharf accommodation, and low port charges. Why, therefore, may not quantities of pulp be shipped thence?

Here is an instance where youth was over-confident. "Have you ever had any experience in keeping books?" asked the merchant. "I studied 'Twentieth Century Bookkeeping' in the newspaper," said the young man, with proud confidence. "Oh! did you," said the merchant. "Well, you come around in the twentieth century, and I will see what I can do for you."

The Halifax *Chronicle* says that a new industry is soon to be started in Halifax county. In May an English syndicate sent an agent to Nova Scotia in search of a suitable material for the manufacture of terra cotta, and as the result of his research it is understood he has been instructed to purchase property in Halifax county, build a factory and make terra cotta. The output of the factory to be sold both in the United States and Canada.

The city of Vancouver wants smelting works in or near it. One proposition has already been made, we believe, and now another was last week submitted to the city council. This time, it is by Mr. H. E. Hague, Canadian representative of the Universal Corporation (Limited), and a finance company, of London, England. He agrees to erect a 100 ton smelter and refinery for a bonus of $100,000, payable at the rate of $3 per ton on every 2,500 tons smelted. At first he wanted free water and exemption from taxation, but later waived these conditions. The council deliberates over the matter.

Having got a bill through Parliament for the purpose, Mr. A. J. Corriveau, of Iberville, has now the right to construct and operate electric lines between Montreal, St. John, St. Hyacinthe, Sherbrooke, Magog, Waterloo, which is a good-sized territory. A system of electric roads throughout the townships and converging at Montreal would be an immense boon to the country, and would, no doubt, ultimately pay, says the St. Johns *News*, which is confident that the experiment would yield a legitimate return between St. Johns and Montreal, and it would be a great boon to this place and Chambly.

Country failures in Quebec Province are reported for the week as follows: Therrien & Co., general dealers, St. Remi, are in the hands of the assignee.——F. B. Latour, general store, St. Polycarpe, has been successful in arranging a compromise at 30 cents, on liabilities of $2,100.——An assignment has been made to the court by J. P. Landry, dry goods, Hull, a young man fresh from college, who only recently succeeded his mother as a storekeeper. Liabilities are estimated at about $3,000. — A French-Canadian with a most peculiar name, J. A. Comfoltey, doing a small general trade at St. Michel Belle Chasse, is offering, probably in vain, 20 cents on an indebtedness of $2,900. He put a mortgage on his real estate just a few weeks before his failure.

The returns of exports to the United States from the Ottawa consular district for the quarter ending June 30th are interesting, as showing the effect of tariff legislation upon trade. Large quantities of those commodities on which it was thought the duty would be raised were rushed across the border, in order to take advantage of the lower rate of duty. Exports from Ottawa during 1896-7 amounted to $2,815,529. In 1895-6 the figures were $2,183,252, an increase during the year just ended of $632,277, or 22 per cent. The total exports for the quarter just ended, and the corresponding quarter of last year, were $1,350,003 and $650,135 respectively. The large increase of $708,867 is made up in the exports of lumber, mica, horses, hides and skins, curtain sticks, shingles and wool.

TENDERS FOR DEBENTURES.

Sealed tenders will be received by the undersigned up till noon on AUGUST 2nd, 1897, for

$67,024 of Municipal Debentures

To be issued by the City of Windsor, Ont. Full particulars concerning which debentures may be obtained by addressing

STEPHEN LUSTED, City Clerk.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

●●●

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

Creditors of the John Eaton Company of Toronto, whose place of business was burned down recently, have been crowding the company for a settlement, and some of them have entered suit for their accounts. The Eaton concern has had difficulty in arranging its fire losses with the insurance companies, and has assigned.

In March, 1895, when F. C. Whitelock, a Toronto grocer, bought out F. J. Benjamin, he claimed to be worth $1,500. The other day he assigned, with liabilities of $3,998, and having assets amounting to $1,665.——R. M. Oliphant, boot and shoe dealer in this city, has fallen behind in his payments lately, and has made an assignment.

Last September, J. A. McLachlan, of Chesley, bought out the Medical Hall at Orillia. The drug stock amounted to $1,500, which he bought at 65 cents on the dollar. His father advanced the money for the undertaking, but the son being rather easy going has allowed business to slip away from him, and the stock, which is worth $2,400, is now advertised for sale.

In Montreal on Monday a meeting of the shareholders of the Canada Shipping Company was held. The result of the meeting was that the proposition from Messers Petersen, Tate & Co., in regard to the taking over of all the steamships of the old Beaver line of transatlantic steamers, the offices, and, in fact, the entire business of what is now known as the Canada Shipping Company, was formally agreed upon. Anything else done at the meeting has not transpired.

With regret we publish the announcement that Patterson & Corbin, car manufacturers at St. Catharines, have found themselves in financial straits. This firm has been in St. Catharines quite a number of years, but for some time past their bank has held a mortgage on their effects, and the other day took possession under it. And coupled with this is the action of the municipality, which has placed the bailiff in charge for taxes. It is stated that the business will be wound up.

Quite a number of cigar and tobacco dealers have come to grief. W. H. Martin, of Windsor, is one who has assigned. M. J. Walsh is another, in the same line and in the same town, who makes an assignment, and Jos. Burton, a Picton tobacconist, has assigned.——A tailor at Port Hope, named C. A. Merrifield, has made an assignment.——T. J. Hanafin, hotel keeper, Windsor, has compromised at the rate of 40 cents on the dollar.——An assignment has been made by W. T. Pearson, a Barrie tailor.

A meeting of the Toronto Board of Trade was held on Monday last, the president, Mr. Edward Gurney, in the chair. The chairman made a statement of the financial condition of the board, showing that the N.Y. Life had reduced its rate of interest, thereby relieving the board of $6,000 a year. The annual subscription by-law was amended as from 1st July inst., making the fee for members resident in Toronto $12, and members resident elsewhere $10 per annum, and in the case of persons becoming members on and after the 1st of July in any year, half of the above respective sums for the remainder of the then current year.

Business College men of Ontario came together on Friday and Saturday last in Hamilton and formed the Business Educators' Association of Canada. The following officers were chosen for the ensuing year: President, Mr. C. R. McCullough, Hamilton; vice-president, Mr. J. W. Westervelt, London; secretary-treasurer, Mr. D. Hoskins, C.A., British American College, Toronto. Board of Examiners—Messrs. W. J. Elliot, Stratford; C. A. Fleming, C.A., Owen Sound; W. H. Shaw, Toronto; D. Hoskins, C.A., Toronto, and J. W. Westervelt, London. The object of the association is declared to be to promote fellowship and fraternity among business educators, and to advance the cause and elevate the standard of business education. Resolutions were passed favoring the closing of colleges during the months of July and August. Toronto was chosen as the place of meeting for the next annual convention.

It is beginning to look as if the smaller bicycle dealers and manufacturers were hard hit when the Pope Manufacturing Co. decided recently to reduce the price of their wheels. During the week there have been three failures in this line in Ontario. The New Barnes Cycle Company, of Woodstock, was incorporated in March, 1896, with a capital of $25,000. It seems the management spent considerable of the company's means in buying patents, and in this way locked up any surplus cash there may have been. Of late maturing obligations have not been well provided for and the company has gone into liquidation with liabilities amounting to $70,000 and assets about $10,000 less.——The Cannon Ball Bicycle Co., behind which were Jones & Durkee, was started at Thorold only last March. Jones was formerly a tailor at that place, and Durkee was a hotel keeper, etc., at St. Catharines. About $1,000 was invested in the business, which has been lost, and now they have assigned.——Another failure in this line is that of Cutler Brothers, Toronto. In April last they bought the machinery and tools of the Wanderers' Bicycle Co., amounting to $3,000, but on what terms they refuse to state. Competition has been strong against them, and not having made much headway, they have assigned, with liabilities of $600, and claiming assets of $1,500.

MINING INFORMATION.

The Rat Portage *News* has it that the owners of the Scramble mine are making all arrangements for getting in their machinery, and expect to have forty stamps running by Christmas.

The directors of the Hall Mines, Limited, operating in British Columbia, have placed before the shareholders the results of the company's smelting operations during a period of 40 days, 17 hours, ending 26th June this year: 5,425 tons of ore were smelted, yielding 386 tons matte, containing (approximately) 181.47 tons copper, 73, 101 ounces silver, 122 ounces gold.

The Foley mine output to June 5th, according to the report published by the *Canadian Mining Review*, had netted close on to $21,000 in bullion, in spite of numerous stoppages caused by changes incidental to a beginning, and to miners' strikes. Miners, it appears, have got the prospecting fever so bad that wages have no charms for them in comparison to prospective millions in a lucky find.

English parties have acquired the Carscallen gold mine in Hastings county and expect to begin to work it by 1st August. The terms of the bargain are at present private. The property consists of 257 acres in Belmont township, and the Marmora *Herald* says the first payment has been made. "The syndicate is composed of some of the wealthiest capitalists of Newcastle, Eng., who will commence the erection of a ten-stamp mill at once, and a thorough development of the property will take place."

THE SITUATION.

As a net result of the Jubilee conferences between the colonial premiers and Mr. Chamberlain, there is so far nothing to show that Imperial Federation has been much, if at all, advanced. The first statement of the result of the conferences is non-official and does not tell us much. But it does assure us, in positive terms, that colonial representation in the House of Commons is laid aside as impossible, and that colonial representation in the House of Lords is to take its place. In pursuance of this idea, the elevation of Sir Donald Smith to the peerage is explained, and it is added that the other colonies, when the premiers return, are to say what would suit them in the way of like representation in the peerage. Let us say again that such appointments are not representative, except in a remote and non-natural sense; and it is difficult to see that the federation of the Empire can be much advanced by the expedient.

In the way of contribution to the maritime defence of the Empire, Cape Colony has done something substantial in the form of a gift of a battleship, which is to be part of the Imperial navy, and is not to be specially held for the defence of the colony from which the gift comes. That, at least, is the form of the transaction, whatever may be the fact. Such is the form in which the Cape, which is in some sense the centre of the British Empire, prefers to put her contribution towards maritime defence. It is not known whether any other colony will elect to put its contribution to this object in the same shape. On behalf of Canada, Sir W. Laurier gave utterance to a different view, and the Australian colonies may have views of their own. Before the organization of the Empire, or rather its reorganization, can proceed very far, it seems to be well understood that Australia must become a federation. Whether the Jubilee celebration will give an impulse to the sentiment of federation, in the antipodean colonies, is not yet certain. Steamship and cable connection between Canada and Australia may tend to develop political changes if the seeds of federation, local or Imperial, fall on fertile ground.

In the general reception in England of the principle of preferential trade, when offered by Canada, few discordant notes were heard. Being offered as a free gift and with a total absence of the higgling spirit, the gift horse was saved from the unpleasant ordeal of having its mouth too closely scrutinized. But there has been enough said to show that the landed interest of England would have preferred that the preference should have been confined to the limits of the empire. Any duty which would raise the price of Canadian wheat 8s. a quarter would raise that of English wheat in the same proportion: this explains why the landed interest of England would be glad to have preference within the Empire at this cost. This interest has, through one of its organs, censured Canada for putting the preference which it has proclaimed on a wider basis. In Canada some who echo that censure and cry aloud for preference within the Empire would certainly prefer that there should be no preference at all.

One remark reported as being made by the Canadian Premier, in the Jubilee jaunts, has not attracted the attention which its significance demands. The colonies, he is reported as saying, must either obtain representation in the Imperial Parliament or become independent. Why this alternative? Why will it assume an imperative form? On these points we have no information. Perhaps, however, Sir W. Laurier only intended to deal with what presents itself to him as inevitable, as something which in the course of events must occur; that he has in his mind's eye some law of development, which, though it must take its course, may follow one of two channels. What sort of representation would, in his view, suffice to secure one destiny and preclude another, he may doubtless have explained in conference with Mr. Chamberlain; but in the absence of a report, all we have before us is the enigma. For fuller light we must wait the opening of the more perfect day.

There is much reason to believe that the view which gives preference to an unwritten bond between the colonies and the parent State for the defence of the Empire, is wisest and best. Sir W. Laurier is warranted in giving assurance, as he has done, that the colonies would readily go to the defence of the Empire in peril. Spontaneous offers of assistance in time of need may be relied upon; on several occasions such offers have been made, even when they could not be accepted. The enlisting of the 100th Regiment shows the facility with which a colonial force may be raised. But there is, it must be confessed, one drawback to the plan of waiting for the word to organize till war has broken out; the raw levies may come too late, and they will probably be wanting in efficiency. Naval auxiliaries cannot be extemporized, but they may be prepared in advance, in the ordinary pursuits of commerce; and if our new Atlantic line of fast steamers, as well as that of the Pacific, serve this purpose, Canada will be doing something like her fair share towards the common defence, in one way or another.

The upshot of the enquiry into the raid into the Transvaal is a strong condemnation of the action of Mr. Rhodes and a clean bill of health for Mr. Chamberlain. The minority report, drafted by Mr. Labouchere, calls for the punishment of Mr. Rhodes, and an attempt will be made to enforce this view in Parliament, but it is not likely to succeed. The only plea on which Mr. Rhodes can escape is that he has been already sufficiently punished, but even this is debatable. In a general way, he has otherwise rendered service to the State, and on a fitting opportunity that deserves to be remembered. The raid was essentially unjustifiable, was a flagrant violation of international law, and might have led to serious complications. The best we can now hope is that it may be forgotten as soon as possible.

The Drummond County Railway deal, and the action of the Senate in demanding an enquiry into it, put the question in that state in which it forms a natural pivot for the centering of public interest. The Government, in assenting to enquiry next session, has become a sharer in the responsibility which enquiry involves. We must suppose that enquiry is, under the circumstances, not improper. The Senate, as a co-ordinate branch of the Legislature, acted within its rights in refusing its sanction to the agreement until certain charges which had been publicly made were explained. That the Senate is a partizan tribunal is true in the sense that there is a large party preponderance on one side; and this is a reason why the committee should show that it can rise superior to party prejudice. The demand for enquiry was not necessarily a party move: there are precedents which make against the view that it was. The constitution of the Senate is a fair subject of discussion at all times, and objections to it can be more easily formulated than repelled; but in the present move, whether wise or unwise, justifiable or not, there is no ground for a set attack on that Chamber; and any menaces on this score, which might be capable of being construed as springing from fear, would be the worst possible policy.

Sir Wilfrid Laurier and Sir Louis Davis both regard the action of the United States on the Behring seal question as an attempt to modify the award of the Paris Tribunal of Arbitration. And to this they, speaking for Canada, are opposed. The facts relating to the destruction of female seals in the sea are not agreed upon, the American agents magnifying the proportion of seals of this sex, in opposition to British official returns. But the chief American official critic admittedly has not proved his case: he merely says he could do so by following the skins sent to London. From the British side some evidence is called for, and as it cannot be collected on the grounds this year, there is nothing for it but to wait. In the meantime, the Canadian representatives do not desire to see the liberties of the Paris award diminished.

Contracts on the Crow's Nest Pass Railway are being let. New problems in connection with the railways of Canada await solution, notably the creation of a railway commission, to which the Crow's Nest bargain refers as a possible entity of the future. Apparently a commission is being promoted in the interest of the railways, which are evidently preparing to claim the right of pooling at pleasure, on the pretence that they may safely be permitted to do so when there is a railway commission to look after them.

CREDIT GIVING.

"I should deem the formation of sound and sober views on the study of credit," said Hon. Edward Everett, "one of the most desirable portions of a young merchant's education." This sensible dictum finds place on the title page of a volume on the important subject of Credits, Collections, and their Management.* The author has had many years' experience in dispensing credit and has been impressed with the need of systematic methods in this department of warehouse management in the United States. He therefore presents some considerations, and gives some hints which, though not all novel, are yet generally sensible and likely to be serviceable. In one of the early chapters the author notes that while the Americans are a nation of credit givers and credit obtainers, they have done hitherto surprisingly little towards rendering these credits safe. Business men in that country, he says, while clever at making plans to add to profits; ingenious in inventions for cheapening and marketing production; prompt in taking advantage of insurance to overcome loss by fire; enterprising in trying trusts and combinations to decrease competition, have only within a year or two set themselves to study the matter of systematizing and restricting credit. But now that they have done so, "hustlers" as they are, it may be expected that they will pursue the subject actively, seeing that they have been heavy losers by bad debts.

A proper distinction is made by Mr. Preston in his chapter on capital as an element influencing the granting of credit. It is important to know whether the capital that a man has in his business is his own; whether it is the result of his labor and saving, or whether he may have inherited it suddenly and does not know how to use it. Again, it is desirable to know in what form a man's capital is before he gets credit on the strength of it—whether in dead stock, in doubtful outstandings, or in real estate. "Thrice valuable and valued is that wealth which is the result of one's own efforts; firmly established is that business founded by the prudence, sagacity, economy and ability of its owner."

The details of enquiry and reply deemed necessary to form a judgment as to a man's claim to credit occupy a considerable chapter of the volume. Some of them are serviceable; as to others, it might be well for our readers who are interested in the subject to buy the volume and decide for themselves. We have been struck with some remarks under this heading by Mr. W. T. Rolph, manager at Louisville for R. G. Dun & Co. This gentleman does not hesitate to say that:

> The larger number of the larger failures that have occurred in my territory have grown from the fact that the merchants gave a divided, instead of an undivided, attention to business. ....The most unfortunate trait with business men of to-day is that they seem to think they must be mixed up with half a dozen schemes, and must become promoters and builders of railroads, bridges, land, and other enterprises about which they know little or nothing, and which should be left to those who know all about such matters, and they are men fitted by experience and training to attend to them. The following out of this craze (for craze it seems) invariably brings disaster to the one business in which the individual is competent by education and natural ability to succeed. It is the old story of the shoemaker sticking to his last.

There are chapters on signed statements by applicants for credit, and on the proper use of statements, and in the Appendix are sample forms for use in credit departments. There is also an interesting chapter on mercantile agencies, and the need of supplementing their reports by additional enquiry. "We have, and we must have, the reporting agencies; we could hardly conduct our business without them." Mr. Preston says: "But there are ways to use and ways to misuse these records. It certainly is not judicious to open an account because of good ratings in one or more of the reference books; and many meet losses because of a desire to save the expense of a special report. They think 'the credit is but small and the rating is good, therefore we will grant the credit.'" Mr. Preston bluntly says, as many another sensible man has said, with greater or less emphasis, before him: Better that an account be never opened than that it be opened upon such information. With which piece of advice we leave, for the present, his very serviceable book, intending to return to it later.

---

* Credits, Collections, and their Management, by the first president of the National Association of Credit Men.—W. H. Preston. New York: Published by "The Lawyer and Credit Man," 178 Fulton st., 1897.

A SUGAR CONTROVERSY.

The word "combination" is of bad associations, and when the press announced the other day that a "combination" existed in the sugar trade, visions of exorbitant profits divided among conspiring grocers came before the public. When the story is sifted to the bottom it loses somewhat in dramatic force. The plain details of the sugar combination are as follows: Several weeks ago the wholesale grocers were buying granulated sugar from the Montreal refiners for $4\frac{1}{4}$ cents per pound, net cash, 30 days, delivered in Toronto, and selling it at $4\frac{3}{8}$ cents in five-barrel lots and $4\frac{7}{16}$ cents in less quantities. The margin between the two prices was not large enough to admit of a reimbursement for the ordinary expenses of trade. It was thought, however, that the refiners' prices would soon decline, and so no change was made in quotations to the retail merchants. When, in the course of time, the refiners agents quoted $4\frac{1}{8}$ cents, the prices to retailers were left unchanged at $4\frac{3}{8}$ to $4\frac{7}{16}$ cents per pound. The sugar business of the wholesale traders which several weeks before had resulted in a loss now began to pay expenses. The gross profit in the sugar trade at present amounts to a fraction more than 6 per cent., out of which must be paid interest on money invested, insurance, wages, cartage and other costs incidental to a merchant's business, leaving a fraction of one per cent. as net profit to the wholesale merchant.

The opposition to the methods of the Toronto wholesale grocers in the sugar business is, however, based more on the difference that exists between city and country quotations, than on the charge of exorbitant profits. Toronto wholesale grocers are offering granulated sugar at $4\frac{1}{8}$ cents per pound at outside points, or $\frac{1}{4}$ cent less than the price quoted to the city retailers. It is maintained that this difference in price is detrimental to the interests of the trade of Toronto. Farmers find that they can purchase sugar cheaper in the neighboring towns, and when trading give these towns the preference. The explanation of the difference in quotations in Toronto and elsewhere in the province is a simple one. A number of wholesale and retail merchants on the outlook for tariff changes stocked up heavily with sugar last spring. When the budget was announced, it was found that no increase in the duties had been made. The supplies were, in consequence, sold at a sacrifice throughout the country. Although several houses in Toronto had bought considerable quantities of sugar in this speculation, stocks, as a rule, were not excessive here. The wholesale grocers did not feel under compulsion to reduce prices in the local market, but when offering merchandise in the country, and especially in Western Ontario, where competition is very keen, they were obliged to meet the reductions caused through the efforts of the speculators to unload. The situation is somewhat peculiar, but it is thought that the trade will soon be in a normal condition again.

ONE ASPECT OF THE COAL STRIKE.

A feature of the strike of workmen in the Pittsburg coal district which is of special interest to Canadians is the fact that the coal producers have recently been asking an increase in the import duties to protect their workmen from "cheap" Canadian labor. Congress, in advancing the duty from 40 cents to 75 cents by the pending tariff bill, has justified its action largely on these grounds. The consumers of coal, who were not disposed to view kindly any legislation which would result in an appreciation of the price of this necessary of life, were told that the benefits resulting to the country from the increased wages in the mining district would prove more than a compensation for any losses that might occur through dearer coal. The men might be justified by these statements in asking for the full advantages that were supposed to follow the exclusion of Canadian coal from the United States markets, but in demanding an increase of nine cents per ton, they have asked for scarcely more than one-fourth of the increase in duty. The present session of Congress has witnessed several instances of incomplete and erroneous wage statistics submitted to Congress, and hastily-drawn conclusions as to cheap labor in Canada and the necessity of protecting the artisan and laborer of the United States from its degrading influence. Some weeks ago we took occasion to refute the argument that the wages in the Canadian lumber trade were much lower than those in the same industry in the United States. The statements made as to the disparity between the wages of Nova Scotia and Pennsylvania miners, although recent statistics for purposes of comparison are not at hand, are believed to be equally unfounded. It is interesting to see the optimistic predictions of the high protectionists so soon brought to the test.

TORONTO TRADE FIGURES.

As was noted last week, the imports and exports for June, at the port of Toronto, were $1,276,033 inwards, and $673,675 outwards, both being in excess of June, 1896, exports more than double. The value of free goods was $411,077, as compared with $396,694, the main items being hides and skins, dyes and chemicals, metal goods, fruits, broom corn and wool. The principal dutiable goods are shown in the following list:

DUTIABLE IMPORTS.

	June, 1897.	June, 1896.
Cotton, manufactures of	$61,798	$ 62,890
Fancy goods, laces, etc.	33,177	21,811
Hats and bonnets	7,897	4,615
Silks, and manufactures of	34,804	42,311
Woolen goods	87,137	126,141
Total dry goods	$224,813	$257,768
Brass and manufactures of	$ 5,064	$ 3,611
Copper "	422	296
Iron and steel "	121,516	95,812
Lead "	5,686	7,475
Metals and comp.	8,562	5,589
Total metals	$141,250	$112,783
Books and pamphlets	$21,043	$25,131
Bicycles	30,443	50,094
Coal, bituminous	20,519	19,628
" anthracite (free)	77,814	126,529
Drugs and medicines	20,412	19,159
Earthen, stone and chinaware	17,182	27,139
Fruit, green and dried	15,905	17,699
Glass and glassware	23,107	20,439
Jewellery and watches	18,111	15,646
Leather and manufactures of	22,8[illegible]6	13,125
Oils of all kinds	12,869	10,752
Paints and colors	10,028	5,437
Paper, envelopes, etc.	41,406	33,428
Spirits and wines	9,825	8,424
Wood and manufactures of	9,040	7,119

Exports for the month were larger than usual, being $673,675 in value, all but $31,383 of which was the produce of our own country. We submit our usual comparative table below:—

EXPORTS, PRODUCE OF CANADA.

Produce of	June, 1897.	June, 1896.
The Mine	$ 50	$ 115
" Fisheries	531	2
" Forest	172,023	9,850
" Field	28,084	6,612
Animals and their produce	362,855	203,869
Manufactures	78,749	85,525
Total	$642,292	$305,973

COMPROMISING DEATH CLAIMS.

Within the fortnight we have had letters from Belleville, Hamilton, Rat Portage and Winnipeg, as well as enquiries in the city, about the article on "Compromising Death Claims," published in this journal some weeks ago, desiring its re-publication as a pamphlet. We have replied that we should not so re-publish it. This week we have a letter from Fort Qu'Appelle, N.W.T., in which the writers enclose a reprint of the article in question, not by us, and say; "Anna O'Brien writes to the *Hamilton Times*, date 12th June, exonerating the Mutual Reserve Fund Life from the charges [of THE MONETARY TIMES]. Can you give any explanation of this?"

A very ready explanation of it is that the Mutual Reserve, which had previously offered to compromise the O'Brien claim at $2,500, has, since our article appeared, and the attention of influential Hamilton people has been drawn to the matter, paid the claim of $5,000 in full. Whereupon Mrs. O'Brien, the beneficiary, writes to the company that "the claim has been settled to my entire satisfaction," and she inconsequently hints her disapproval of the very paper that helped her to get the extra $2,500. It does not hurt our feelings in the least. We are glad that the good lady has got her claim, and we are pleased that the company paid it. But the Mutual Reserve having paid the claim in full in June, it would not have been seemly for us to reprint thousands of copies of a previous article pitching into that company for *not* having paid it. This is our reason for not adding the article to our list of pamphlets.

Still, the Mutual Reserve is not always so prompt and generous—does not always pay in full when it might be more creditable to do so. There was another case in Hamilton, that of Dr. Russell H. Gowland, who became insured with the Mutual Reserve in 1894 and died in December, 1896. The company offered $1,500 in settlement of the claim of $3,000, which offer was refused by the beneficiary. After correspondence, and the visits of two travelling adjusters or agents to Hamilton, this claim also was paid in full. We despatched a representative to Hamilton the other day, who learned a good deal about the matter. Statements made by the company and by friends of the beneficiary, as to the basis of this claim, vary greatly, and we prefer to hear from the New York office of the company replies to certain enquiries we have made about the circumstances of Dr. Gowland's alleged lapse. Mr. McMurtry, the Canadian manager, obligingly offered to procure us certain documents we desire from the head office. They are not yet to hand.

MASSACHUSETTS BENEFIT LIFE ASSOCIATION.

A man has just called upon us for advice. He is 58 years of age, and 16 years ago joined the Canadian Mutual Aid Association, an assessment company. He paid at first $5 every two months, and for this was held insured for $2,500. Afterward this assessment was doubled, making him pay $60 per year. Then the company was taken over by the Massachusetts Mutual Benefit Life Association, which proceeded to raise the rates to $86 a year, and the last demand made upon this insurant this month is for $14.32 regular bi-monthly call and for $27.76 extra call. The extra call is made because there are death claims amounting to $325,000 waiting to be paid, and it is hoped to pay them by this means. This serious accumulation has arisen from the "failure of assessment policy-holders to pay in the past the actual cost of their insurance"; in other words, the rates were inadequate, as THE MONETARY TIMES has so often contended, and now the M.M.B.A. is struggling to get an adequate rate and is finding it desperate work.

The commission appointed last winter to examine the affairs of the company reported to the Governor of the State last week. It takes a gloomy view of the condition of the association, as the following extracts make plain:

> "The company is doing a dual business, in which each class antagonizes the other, and in the nature of things they cannot be reconciled. The policies issued prior to 1890 are now, and have been for six years, depleting the association. They not only have not paid what it fairly cost to carry them, but have absorbed a large proportion of the share of the emergency fund belonging to the stipulated premium policies. The result is obvious. This incubus must be removed in order to maintain existence. . . . The policy-holders must consider the problem as one of self-preservation, and if all cannot be saved, then such as are not willing to do that which they in fairness ought to do should be thrown overboard, that those who are willing to do their share may survive. The policies prior to 1890 have never contributed their share, and unless they are willing to pay extra and increased assessments, equal at least to the cost of carrying them, then they should withdraw or else be forced out.
>
> "As to the future of the association, we are satisfied that its survival depends entirely upon the prompt payment by those holding policies issued prior to 1890 of extra and increased assessments henceforth, or upon all of the holders of such policies withdrawing from the association. An extra assessment is at present required to pay accrued death losses. . . . The association must cure itself, as neither legislation or litigation can aid it in this respect."

The man of 58 years, who has paid into the Canadian Mutual Aid and its successor over $800 since 1881, asks, "What shall I do? Shall I pay the $42.08 asked of me on July 1st, or shall I let the certificate lapse and lose all I have paid?" It seems a hard thing to do, but in the face of the report quoted above, we could not do otherwise than say he had better lapse now than be called on, as he likely would, to pay further and heavier assessments. Those who are to blame for the position to-day of this man, nearly 60 years of age, with a family, and who realize the injustice of his treatment and the gravity of his position, must be burdened with responsibility and a sense of shame.

OUR AUSTRALIAN LETTER.

By the last Frisco steamer there came a former Toronto man, who is over here to sell Yankee-made oatmeal. His first proceeding was to contract for about five thousand dollars worth of advertising for this city alone. His next to hire various boys, dress them up as Quakers and deliver trial packages of his brand in every house. A nice penny this will cost him. I mention this not that a Canadian may copy it, for privately, as oatmeal is not as generally used here as in Canada, I doubt if the enterprise will be profitable, but just to show how things are done here, and particularly to show how absurd his ideas of business are to that particular Canadian who thinks that his goods are so badly needed here that he is wofully disappointed when chucking his catalogue over to Sydney or Melbourne does not elicit car load orders by return of the steamer.

This ex-Canadian is doing a very sensible thing—he is not meeting lowest prices. The trade buys a good locally-made meal at five pence per package. He is asking seven pence for his, and he will get it, too. The only question is, can he create a demand large enough to pay for the outlay? He says he can. His plan might be copied by some Canadians in certain lines.

Here is another thought. The best oats in the world are, or were, going begging in the Canadian North-West at twelve and one-half cents per bushel, and here is presumably a first-class Canadian traveller selling oatmeal made in Central United States from inferior oats at twice the price. Some day or other Canadian capital and enterprise will bring these Canadian oats and the traveller together, and then Canadian oats will bring more money, and some young Canadians will not be compelled to leave their country to find a billet.

There are some Canadians who have the right sort of enterprise. The "Miowera" brought over two Toronto manufacturers of window shades. Messrs. Turner and Hees. It came about in this way. Menzie, Turner & Co. have a nice business here already, but Mr. Turner wisely thought it would do his health no harm and his business some good to drop over and look at things for himself. I am glad to know that he will improve both even if he does return home after staying only less than six days in Australia. The business of Messrs. Menzie, Turner & Co. was in the hands of an American firm, the largest and best in the country. But there are other firms that naturally wanted to get shades, too. It became clear that competition was bound to come, and the Canadian Commissioner decided that it was better to come from Canada; he accordingly wrote to the only other manufacturer whose address he had, that if he wanted to do business in Australia the writer had a manufacturer's agent who wished to hear from him. Mr. Hees wisely concluded that he would come over and start the thing. Unfortunately, the agent who wanted to act for him was away, but another good one was found. Mr. Hees treated him liberally, and at once started on business. He, too, may go back on the return steamer, after being here less than a week, but he will take with him a nice lot of orders from big houses, with more to follow. If business demands it both will stay for another month, although they are anxious to get back as speedily as possible. Canada is coming on.

Drought, dreadful drought, is still the cry from the sheep stations. Good rains have recently fallen on the dairy districts, and a part of the wheat areas, but over the most of the country where "the golden fleece" is produced there has not been a useful drop of rain for more than a year. Sheep are dying or being killed at the rate of half a million a week on this continent. One sheep-raiser told the newspapers that there will be twenty-five million less sheep in New South Wales in December, 1897, than in December, 1896. This is the third hard year, and as a consequence, there were fifteen million sheep less in 1896 than in 1895. If this evil prophecy proved true there would be only twenty million sheep left out of sixty million in 1891, a loss of sixteen times as many sheep in one colony as there are in all the Dominion of Canada. Horses and cattle are perishing, too. I don't believe that it is quite as bad as his story, but it is verv bad.

You would suppose that with such losses and rumors of losses Australia would be in a gloomy mood. Not a bit of it. The Australian is the most cheerful fellow alive. The other day the Government sent an expert down to an afflicted town, where it was alleged there was left only some diluted mud to drink (and even that would soon be gone), to see whether something could not be done to relieve the misery. When the got there he found no one to receive him. The townspeople had emigrated to the next town to see the annual horse races. So long as there is water enough to keep his horse alive the Australian is not going to be deprived of his fun because of the loss of his "brumbies." It is not because he is callous, but because he is used to it. Droughts here are like the terrible frosts in Canada, that annually kill off all the peach blossoms. It is bad, very bad, for the sheep, no doubt, but the owner says, "the country is rich enough to live through this, as it has lived through a dozen such episodes, and next year and the year after there will be good rains ,and then we will make up for our losses." If the worst comes to the worst, he will get the Government to send him out "fossicking" for a gold mine.

The Canadian papers have published a statement that the United States Consul-General has sent "an important despatch to his Government that in a very short time the Australian colonies will be federated with a policy of free trade." I am afraid the Consul-General is optimistic. It is not possible to bring about federation under three years, most people believe that it won't be accomplished in thirteen. When it does come it is absolutely certain that there will be a tariff. Five out of the six colonies are protectionist, and one or two very severely so. One of the serious objections of New South Wales is that under federation she will have the Custom house restored. However, if Canada acts wisely, she may get an arrangement that the tariff will be no harm to her.

At first the objection to the constitution framed by the Adelaide delegates was to its financial policy, but in this colony it is now centred against the proposed Senate. Some of the doctrinaires have thought that the United States plan of equal State representation in the Upper Chamber was a necessity, but Canadian federation and the principles of its constitution are getting better known and understood, and the popular sentiment in the Legislative Assembly, more than four to one, it is said, favors more closely following the Canadian plan. The constitution has been debated for two weeks in that chamber, and it has found scarcely one defender out of the members that have spoken. The United Empire sentiment is helping on the movement, but the Australian scheme will have to undergo serious revision before it is accepted here.

The Canadian competition has led the Frisco service to replace one of their liners by a new steamer. She is handsome and of good size bulk. The "Aorangi" is as handsome and larger. The Canadian line totals 11,250 tons, while that of the Frisco steamers totals less than 10,000. Still the carrying capacity of the Canadian vessels cannot carry the goods offering coming this way. Not bad for a development of three years.

It is probable that three Australian Premiers will be in Toronto about August 2nd. It is likely that it will be the only Canadian city they will be able to see. Canadians here hope that the Government and Board of Trade will make things pleasant for them for the little time they will be there.

An agent representing certain Gananoque and Brockville manufacturers told a story the other day that indicates that a Canadian can run badly to seed. He said he was well received by the leading firms of the city and was given promises of orders by all of them but one, and the buyer of that one professed to have been born in Gananoque. He refused to look at samples or prices. He said he knew the factories of that town and of other parts of Canada, and it was ridiculous for any of them to expect to sell goods here. The explanation is that he went to the United States, became a citizen, and justifies his act by traducing his native country. A Canadian-Yankee seems to have most of the bad elements of both countries and a few of the good ones.

What is the matter with the Canadian grain men? Blue peas are quoted here at $1.37 per bushel, and oats and barley at a price that would appear to justify a profitable trade, but not a move, though the Canadian Commissioner says he called attention to the probabilities of this business in October last. Can't THE MONETARY TIMES get them to look around the world instead of keeping their eyes on one spot?

There is an unpleasant rumor that one or two Canadian manufacturers have failed to fill orders sent them because prices have advanced since they made the offer, though no notice of the advance has been sent here. The result of this act may be judged from the comment heard here, "They are only a lot of ——— Yankees, anyway." John Bull holds his trade because when he makes an offer he sticks to it, even if he loses by it. Canada can't afford to have a less worthy reputation.

W. B.

MEETING OF THE BRITISH ASSOCIATION.

Next month Toronto will be distinguished in a most unusual manner. One of the great scientific bodies of the world, the British Association for the Advancement of Science, is to hold its meeting in our midst. When, in 1884, for the first time in its history, that body met outside the boundaries of the United Kingdom, it came to Montreal, and a memorable meeting that was. Sir William Thomson, of Glasgow, now Lord Kelvin, expressed on that occasion the hope that the scientific connection now begun would be perpetuated, and that the association would in due time assemble in Toronto, Quebec, and other cities of the Dominion. That distinguished gentleman is to see the fruition of his hope, for he is to be one of the five hundred British scientists in session here from the 18th to the 25th August.

There is another eminently interesting feature of the occasion. The American Association for the Advancement of Science, which assembles in Detroit next month, has so timed its meeting that it will be adjourned on the day before the sister association assembles, and something like a thousand votaries of science from all over the United States will probably spend the following week in Toronto. The presidential address of Sir John Evans, which will doubtless draw a crowd, is to be delivered in Massey Hall, but the meetings of the various sections of the main British body will be held in various buildings of Toronto University.

Happily, the Local Managing Committee have been, by contributions of the Dominion and Ontario Governments and the City Council, placed in a position to meet the necessary expenses of this very important occasion without asking individual subscriptions, and the money secured is in good hands. Our citizens, however, will have many opportunities of showing courtesies to the visitors, and they ought not to need urging to let our eminent guests not only see the beauties of Toronto and her surroundings, but feel a true Canadian welcome. The impression made upon English folk by the very successful Montreal gathering was deep and lasting. It only needs that Toronto shall put her best foot forward to please visitors who will not be hard to satisfy.

WINNIPEG INDUSTRIAL FAIR.

Those who are thinking of holiday trips should not forget that the Winnipeg Industrial Fair opens in Winnipeg on Monday, July 19th, and is to continue for a week. For Ontario people there is much attraction in a sail by one of the big and comfortable C.P.R. steamers from Owen Sound to Port Arthur, and thence by rail to the capital of Manitoba. But for anybody the Winnipeg Industrial has charms of its own. By energetic management this annual show has so enlisted the pride of Manitobans that they strain every nerve to make a good and varied display, and that they can do so is shown by what they did last year. And this year, races and platform attractions will divide the attention of those who wish to be amused as well as instructed. What is more, by a broad policy its managers have enlisted sympathy from other provinces of Western Canada and from the Territories, so that their products of forest, field and mine are being shown at Winnipeg. The animals, certainly, after so fine a grazing season, must be in splendid condition. Holding this fair in July, in advance of the Manitoban harvest, is a novelty, but doubtless has its justification. Many people will attend now who could not attend in September. We heartily wish for the Winnipeg Industrial a crowded and prosperous week.

VICTORIA BOARD OF TRADE.

The annual meeting of the British Columbia Board of Trade was held in Victoria on Friday, 9th June, when various matters of interest to the province and city were discussed. We are not told that the proposition made to the Council of Vancouver by Mr. Hague, representing two Old Country companies, to erect a smelter near the city, was mentioned. But of course that was a proposition made to Vancouver. The report recommended that the Provincial Government should memorialize the Government at Ottawa, urging the construction of the Penticton road this year. Hon. Mr. Turner, who was at the meeting, replied to this that the British Columbia Government is now in correspondence with the Dominion on this very subject, and also with reference to building the road to the coast. Hon. Mr. Turner expressed the opinion, however, that the Dominion Government will not deal with more than the Penticton road during the present year.

Officers were elected as follows: President, G. A. Kirk; vice-president, W. A. Ward; secretary, F. Elworthy; council, Messrs. D. R. Ker, F. S. Futcher, A. C. Flumerfelt, J. H. Todd, F. B. Pemberton, R. P. Rithet, F. C. Davidge, Simon Leiser, A. H. Scaife, C. Hayward, W. H. Bone, A. G. McCandless, C. E. Renouf, F. W. Bullen and F. J. Claxton.

BOOKS RECEIVED.

The Self-Proving Accounting System, with application to the instalment business, by A. O. Kittredge, New York, and J. F. Brown, Toronto; published by The Self-Proving Account Book Company, New York and Toronto.

The past twenty years has seen as remarkable changes and progress in the science and practice of accounts and book-keeping as in any other branch of science, it being subject to the inventive genius of a myriad of clear-headed accountants, all interested in securing the best possible results with a minimum of effort. A. O. Kittredge, F.I.A., formerly editor of *Business* and now of *Accountics*, New York, has done much to collect and preserve the results of this study. In The Self-Proving Accounting System, the authors claim to present "double entry brought down to date and adapted to modern requirements," and it is certainly a fine example of advanced book-keeping, being a thorough study of accounts, and a careful analysis in the direction of labor-saving and division of labor. In Part II. is given a description of the account books required by the system, with examples in *fac simile* of a set as applied to the instalment business. These books are provided under copyright by The Self-Proving Account Book Company.

The system consists of one principal book, the private ledger and balance sheet, containing a complete but condensed history of the business and combining the character of a posting medium as well; the details being recorded in auxiliary books, and every part being self checking. It is readily adapted to any business, the instalment business having been selected as an exceptionally intricate example. This application of it is worked out in detail in Part III, and Part IV consists of a series of suggestions to instalment merchants by Mr. J. F. Brown, of Toronto. The book is a very practical and valuable addition to the literature of accounts. It contain 328 pages, is well printed on good paper, and in a strong cloth binding, and should be in the hands of everyone interested in the progress of accounts.

Fire Insurance Law, Ontario. †—A deal of practical and serviceable matter to not alone the merchant and manufacturer, but the insurance agent and even the lawyer, is brought together in the 160 pages of this distinctly printed and convenient-sized book. Its aim has been "to cover the laws affecting business between the fire insurance company and the insuring public." The short summary of the growth of fire underwriting in Ontario, and the reference to fire investigations, are succinctly done. The list of insurance law cases, and the Appendix containing the Ontario Act, render the work still more valuable.

ONTARIO CHEESE BOARDS.

The offerings on the Ontario cheese boards during the week were somewhat less than the record of receipts established a week ago. Last week at sixteen board meetings 39,668 boxes of cheese were offered, while this week at eighteen meetings 34,734 boxes were boarded. The decrease cannot be taken as detracting in any way from the general opinion that the season's make will be a large one, and it would occasion no surprise to see the deficiency made up next week. The range of prices, extending from $7\frac{3}{4}$ to 8 15-16 cents per pound, was a fraction less than values a week ago. Shipments from Montreal for the week ending July 10th were 100,437 boxes, as compared with 51,544 boxes a year ago. The shipments to date have been 539,452 boxes, as against 404,681 boxes during the same period last year. These statistics show wonderful growth in an industry which many thought had already reached its full development. We append our usual table of transactions on Ontario Cheese Boards:

Boards.	Date of meeting. July.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date next meeting.
Brockville..........	8	..	4,600	4,000	$8\frac{1}{8}$-$8\frac{1}{4}$	......

FOR GROCERS AND PROVISION DEALERS.

The Winnipeg *Free Press* states that strawberries are being grown in Manitoba with success.

The *Corn Trade News* of June 29th said that the English wheat prospects indicate a yield of 51,240,000 bushels, against 58,400,000 bushels last year.

Advices by mail from Sicily state that the new crop of shelled almonds will be light. Prices have advanced to a high figure, especially in Bari, the output of which will be smaller proportionately than that of Sicily.

London took 42,000 boxes of Canadian cheese last week; Liverpool, 17,000; Bristol, 15,000; Leith, 10,500; Glasgow, 9,000; Belfast and Newcastle the remainder of a total shipment for the week amounting to 100,417 boxes, which was 47,000 boxes ahead of the same week of 1896. This year's export of cheese to date is about 130,000 larger than to 10th July last year.

---

† A Handy Book on Fire Insurance Law, affecting the company and its customer; being the fire sections of the Ontario Insurance Act, 1897, with decisions since 1876. Compiled by Roderick James Maclennan, of Osgoode Hall, barrister at-law, Toronto: The Carswell Co., Limited, publishers, 1897.

A letter from Messina states that the new crop of filberts is backward, and that consequently higher prices for first half of October shipment are expected. The output in Messina districts is expected to be between 45,000 and 50,000 bags, and in the Catania districts 20,000 to 25,000 bags. There is said to remain in Sicily about 8,000 bags of 1896 crop, but it is not urged for sale, as the consuming demand is expected to absorb it.

The Imperial Statistical Bureau of Germany, in its report for mid-June, covering the whole Empire, gives a general improvement in crop conditions since mid-May, the result of warm, favorable weather. The figures given for wheat and rye denote conditions but little below "good," whilst barley, oats and potatoes can be described as a good average. Compared with June, 1896, oats show equal condition, the other cereals better.

ABOUT DRY GOODS.

The total settlements of raw silk in Yokohama from July 1, 1896. to June, 8, 1897, were 49,070 piculs, against 56,225 piculs for the corresponding period of the previous season. The unsold stock of raw silk in Yokohama on June 8th last was 2,630 piculs, against 7,945 piculs at the same date last year.

The Montreal Cotton Company, it is said, has donated spacious grounds for athletic purposes to their employees in the mill at Valleyfield, Que., in commemoration of the Queen's Jubilee. Actions of this kind are of more effect in settling the labor question than a dozen courts of arbitration.

It is reported that a number of velvet manufacturers of Crefeld are contemplating a change in their production, and the turning of the whole or part of their plant to the manufacture of silk piece goods. Business in velvets has been so slow during the past twelve months that the reverting of energies into other channels of industry is only a step in the right direction.

A Leeds mail advice states that "Canadian representatives are more than usually numerous. Their chief object seems to get hold of the latest patterns for the fall trade and for next spring. The newest styles in costumes and cloakings have already most attracted their attention. The continental prospect is not of the brightest, there having of late been some heavy failures over there."

The Paris correspondent of the New York *Economist* writes: The following are the shades that will be most in favor this season: Lavender gray, almond green, silver gray, for plain materials. The checked, figured or shot dress stuffs will be formed by a combination of these shades, presenting often a white sheen on their front surface. Ladies' cloth, cashmere, canvas and vigogne are suitable for travelling dresses, while barege, linon, pique and all sorts of muslin are chosen for the table d'hote or afternoon wear on the beach or at the concert. Grenadine, silk gauze, Liberty silks and foulards will make up well for an evening dance at the Casino or for concerts or theatricals.

A large number of Canadian dry goods men are now in British textile markets. The *Drapers' Record*, July 3rd, notes the following arrivals from the Dominion:—Mr. G. M. Smith (Halifax, N.S), Mr. W. L. Brock (Messrs. Brock & Patterson, St. John, N.B.), Mr. J. Geddes (J. B. Campbell) and C. J. Catto (R. Simpson, Limited, Toronto), L. H. and G. Ingram (Smallman & Ingram, London, Ont), Mr. G. D. McKay (Toronto), Mr. G. Mickleborough (St. Thomas, Ont.), Mr. J. White (Woodstock, Ont.), Mr. R. Darling (Toronto), Mr. T. W. Watkins (Pratt & Watkins, Hamilton, Ont.), Mr. C. Coristine (Coristine & Co., Montreal), Mr. J. P. Archibald (J. P. Archibald & Co., Truro, N.S.), Mr. G. A. Jones (Toronto).

INSURANCE NOTES.

Mr. Henry Harben, the deputy chairman and guiding spirit of the renowned Prudential Assurance Company, has been knighted. Mr. Harben is a cousin of Mr. Joseph Chamberlain.

The Sun Life Insurance Company has purchased the Waddell block, adjoining their own fine building, for, it is said, $65,000, thus securing the entire square facing on Notre Dame, John, Hospital and St. Alexis streets. The company has now an area of 7,060 square feet, the quantity purchased for the sum mentioned being 4,000 feet.

A prospective agent once wrote to a life insurance veteran asking many questions, and among them was this: "Can one get a good idea of life insurance business in a week?" The veteran replied as follows: "One can attend a week's course of lectures in a dental college, and find himself able to yank the leg out of a chair bottom." "And so he can work a week at life insurance," says a contemporary, "and perhaps tell the difference between a mortality table and a billiard table, but to become posted and armed with facts and figures and reliable information of all kinds pertaining to his business, so that his auditors will listen to him and respect him, so that his competitors cannot down him and walk on him, yell and squeal over him, the student of life insurance must study his subject as he would his arithmetic, geography or speller."

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing-houses fo the week ended with Thursday, July 15th, 1897, compared with those of the previous week:

CLEARINGS.	July 15.	July 8.
Montreal	$11,466,344	$13,589,459
Toronto	7,352,818	10,027,231
Halifax	1,288,250	2,338,277
Winnipeg	1,253,198	1,377,304
Hamilton	632,763	798,862
St. John	761,560	890,705
	$22,754,933	$29,021,838

Aggregate balances this week, $3,368,441; last week, $4,349,815.

—A somewhat important meeting of Montreal bankers was held on Wednesday, noon, to discuss the advisability of reducing the rate of interest on deposits. The matter was evidently pretty well threshed out, and it is understood that a resolution was put, and adopted, to the effect that after the 1st of September the general maximum rate allowed by the banks on deposits shall be three per cent., to be calculated on the minimum monthly balance. In the case of two or three banks a modification was allowed, by which they are permitted to continue 3½ on some large deposits of long standing, with the understanding that the three per cent. rate shall come into force in all cases by the 1st of January, 1898. That the step now taken was bound to come, has been quite evident for some time past. The tendency of the money market has been steadily downward; we hear of recent considerable borrowings of call money in Montreal at 3½ per cent., and though the general discount rate is still 6 to 7 per cent., it has been a matter of common report that in the case of a few large concerns, whose paper is of a gilt-edged character, the rate has been shaded to 5½ per cent. Montreal bankers have been longer in reaching a conclusion as to interest on deposits, than those of some Ontario cities, who moved in the matter months ago.

—A hopeful tone pervades the report of the Hudson's Bay Company, submitted at the meeting in London last week. Prices of furs have been low, it is true, but improvement in other branches of the company's business has in some degree offset this. A dividend of thirteen shillings per share was declared and a larger balance carried over than in the preceding year. While sales of farm land have reached 10,784 acres in the last fiscal year, compared with 9,299 acres in the previous year, and town lots have realized several thousand dollars more, the relative price of farm land this year is low. But this shrinkage in value is regarded as temporary, "the reviving prosperity of the country and increased immigration warranting this assumption." In this connection we observe that the sales of farm lands in Manitoba and the North-West by the Canada North-West Land Co. were 17,200 acres for $94,000, or say, $5.46 per acre, in six months of the present year, compared with only 7,800 acres, at $5.13 per acre, sold in the same period of 1896.

—The annual report on the affairs of Winnipeg, made by the controller, has been issued, the city's fiscal year ending with April. More taxes have been collected and less are outstanding than in previous years. The sum of $511,551 was received in taxes, which is about $20,000 more than in any previous twelve months, and the outstanding taxes are $18,321, less than at close of previous year. Total civic receipts for the year were $866,863.43, and the total disbursements $785,212.63. The general debentures outstanding amount to $2,538,894.30, an increase of $74,211 during the year. The local improvement debentures amount to $707,979.71, a net increase of $143,247. Of these debentures $40,000 were retired.

—Our usual Halifax quotations not having reached us this week in time to be placed in the Stock and Bond report of this issue, we now reproduce them on this page. They are dated 13th July:—Bank of Nova Scotia, 201 to 206; Bank of British North America, 106 to 111; Merchants' Bank of Halifax, 172 to 176½; Union Bank of Halifax, 125 to 128; People's Bank of Halifax, 100 to 105; Halifax Banking Company, 146½ to 150; Bank of Yarmouth, 115 to 119; Commercial Bank of Windsor, 110 to 116; Exchange Bank of Yarmouth, 95 to 98.

UNITED STATES AFFAIRS.

Henry Clews says in his circular, dated Wall street, New York, July 10th: "Five years ago, we were verging on the beginnings of one of the greatest commercial and financial reactions in the history of the country. The setback was due not only to the evils of the silver inflation consequent upon the Act of July, 1890, and the agitation in favor of free coinage that has followed, nor to the Treasury troubles growing indirectly out of those conditions, nor to the influence of unsettling politics and the imperilled state of our foreign relations—there was a deeper and more influential force at work in the great revolution in the processes of production, involving an immense increase in production without a corresponding growth in our ability to consume and thus forcing an unparalleled decline in prices. A disturbance proceeding from such a multiplicity of causes, and so deep, widespread and fundamental, must require more time for readjustment and the return of sound conditions than has been found necessary for recovery from our ordinary panics. It was an industrial, a commercial, an agricultural and a financial crisis all united in one; and each great branch of activity was thus incapacitated for helping the other towards recuperation. There is now, however, abundant evidence that five years has sufficed to bring back natural forces to their normal play. On all sides, these are the signs of a completed readjustment to the new conditions that have grown out of the protracted chaos, and it is therefore important to ascertain just how we stand, in respect to the investment interest, as compared with five years ago. Our railroad industry perhaps affords the best means of illustration. Turning to the month of May, 1892, we find that 142 roads showed a total of gross earnings amounting to $204,000,000. For the same month of this year, 130 roads report gross earnings aggregating $191,000,000. This shows a slight gain in the rate of gross income, but not to an extent commensurate with what would have been realized under ordinary prosperous conditions. As to net earnings, we find that in April, 1892, 127 roads showed $15,999,000, whilst for April, 1897, the sum of $16,045,000 was earned, net, by 134 roads. These figures show that the status of the business of the railroads falls below that of five years ago; but less so than might have been expected from the severity of the depression through which the country has passed. The comparison following shows the current market value of active railroad stocks, together with the prices of July 1, 1892:

	July 1, 1897.	July 1, 1892.
Canadian Pacific..	65	89½
Canada Southern.	49¼	59
Central Pacific..........	10	30½
Central of New Jersey.. ..	85	138
Chicago & Alton	148	150
Chicago, Burlington and Quincy.....	83	100½
Chicago, Milwaukee & St. Paul	82½	82½
Chicago, Rock Island & Pacific..	73½	80½
Cleveland, Cin., Chi., and St. Louis..	24½	67
Colorado & Hocking Val..	3¼	36½
Delaware & Hudson..	110½	138
Delaware, Lackawanna & Western	156¼	156¼
Illinois Central....	98½	102½
Lake Erie & Western.. ..	15	24
Long Island.	45	112
Louisville & Nashville	51	72¼
Manhattan Elevated	91	130
Oregon Railroad and Navigation	20	72
Rio Grande Western......	19	36
St. Paul & Duluth........	22½	43
Southern Pacific	15	37
Wheeling & Lake Erie ..	1	30½
Western Union Telegraph.	84½	93½
Missouri, Kansas & Texas, preferred	30	26

It will be seen from these quotations that the value of shares has fallen and now stands much below the relative decrease in the earnings, whether gross or net, of the railroads. Taking 1892 as representing the value of these securities during a fairly prosperous period, very large advances in prices must be made to bring values up to the standard of five years ago. Of the 24 stocks above quoted, 21 show a decline below 1892; five stocks exhibit a fall of from 2 to 10 points, and 16 declines ranging between 10 and 53 points. These facts illustrate the distance between the present status of values on this class of securities and that which existed previous to the beginnings of the crisis.

A SPECIMEN OF PUGET SOUND FOREST GIANTS.

Puget Sound, which washes the shores of the State of Washington, just south of Vancouver Island, B.C., is the happy possessor of some of the gigantic trees which give celebrity to the Pacific coast among lumbermen and timbermen. An exchange relates the following about some of the American forest giants, which it would be hard for even our Canadian forest giants to surpass:

An imposing train of 33 cars of logs was brought to Tacoma recently by the St. Paul & Tacoma Lumber Co. logging train, which had on it some healthy specimens of what the forests of Puget Sound can produce. On this train the position of honor was given to the butt log of a fir tree which measured nine feet at one end, seven feet and a half at the other. It was 30 feet long, and scaled 10,264 feet. The next log of same length scaled 8,670 feet, and the next one 7,200 feet, making 90 feet of surface clear. Then there was cut from the same tree two more logs, each 30 feet, which scaled respectively 5,880 and 4,687 feet, which made merchantable lumber. The entire five sections scaled 36,701 feet, the whole being perfectly sound, without a check. This giant fir tree was felled by McDougall & Jackson at their camp near Carbonado, Washington. From the butt log there was sawed a board which measured six feet four inches at one end and five feet two inches at the other.

HANDLING THE SEWAGE OF LONDON.

The sewage of the largest city in the world, London, is handled by two main pumping stations on each side of the Thames, with machinery of an aggregate of 3,000 horse power, capable of pumping some five hundred million gallons per day, and a like number of storm-water pumping stations, capable of pumping directly into the river 150,000,000 gallons per day—the latter being used for preventing flooding in the lower parts of the metropolis when a heavy fall of rain occurred at or about the time of high water, when the storm outlets were closed by the tidal water. The outfall works for the purification of the sewage, the dry-weather flow of this exceeding 200,000,000 gallons per day, consists of settling tanks and their accessories for the chemical treatment of the sewage, and the means for removing the sludge produced to the German ocean. The tanks at Barking are rated at 20,000,000 gallons, and those at Crossness at 31,000,000 gallons, the sludge, amounting to more than 2,000,000 tons, being discharged into the open sea at a distance of about fifty miles from the works by a fleet of steamers.

—Last week the John H. Allan Seed Company exported from Picton to Cape Vincent 15,000 bushels of fancy peas. The duties on the cargo amounted to about $2,500.

—In the Right Place.—The Summer Girl—Oh, ! I love nature so! The Farmer—Well, miss, things is jest as nacheral around here as they are anywhere.—Puck.

BICYCLE HINTS.

Too long a reach on a bicycle is dangerous, while too short a reach causes cramp. See that your wheel is properly adjusted and "fits" you perfectly.

Some people have stopped eating grapes for fear of appendicitis, and it is now said that the bicycle is a prolific cause of that disease. Stop eating bicycles.

The prohibition of the Archbishop of Paris against bicycle riding by priests refers only to garb, priests being allowed to ride in mufti, but not in the clerical cassock.

Those cycling bells, those cycling bells!
How many a tale their language tells
Of people gone before their time
Who heeded not their startling chime.

A bicycle room has been set apart in a new high school building in Detroit that will provide accommodation for not less than 300 bicycles.

Instead of a band confining the trousers, which is so much objected to for the reason that it wrinkles that important garment considerably, a peculiar arrangement has been made by a Detroit man which is fastened to the pedals of the machine. It is light, looks something like an enlarged egg-beater, and works on the principle of a shield.

Don't ride a bent crank further than the first repair shop.

Don't jump curbstones because horses race in steeplechases.

Don't let the tires become so much deflated that you can feel the jolts as the rim strikes the pavement.

Don't fail to inspect every bolt and nut at least once during the week. They wear loose and the machine is easily racked and strained if they are not properly adjusted.

Don't pour a gill of oil into the bearings as often as you start for a ride of five miles. A little oil once a week is enough for any bicycle, and some need oiling but once a month.

Don't skip the teeth of the sprocket wheels when you clean every other part of the bicycle. The grit that accumulates at those points is enough to wear out the best chain ever made.

STOCK TRANSACTIONS.

Following is a list of the transactions that have taken place on the Toronto Stock Exchange, from Friday the 9th inst. to Thursday the 15th inst. Ontario Bank, 5 at 83; Commerce, 110 at from 125 to 125½; Imperial, 2 at 185½; Hamilton, 20 at 166; British America Assurance, 135 at 123; Western Assurance, 2,041 at from 161 to 164½: Consumers' Gas, 1 at 205½; Canada N.-W. Land, 25 at 40; C P.R. Stocks, 710 at from 65 to 66¾; Toronto Electric Light, 365 at from 134⅛ to 136¼; Commercial Cable, 786 at from 171⅞ to 173¾; Postal, 29,000 at from 107¼ to 107½; Toronto Railway, 100 at from 78⅝ to 78⅞; Canada Lan. and Nat., 25 at 102¾; Canada Per. Loan, 104 at 97 (20%); Freehold Loan & Sav., 38 at 75 (20%); Huron and Erie, 150 at 148 (20%).

A TRAP THAT FAILED.

James T. Fields, the Boston publisher, had a good memory, and his knowledge of English literature was well known to be both accurate and extensive. An exchange relates an amusing story of a would-be wit who once tried to entrap him.

The incident occurred at a dinner party. Before Mr. Fields arrival one of the gentlemen informed the other guests that he had written some lines which he intended to submit to Mr. Fields as Southey's, and to ask in which of that author s works they could be found. At a lull in the conversation after the dinner was in progress the would-be wit began:

"Mr. Fields, I have been somewhat puzzled of late in searching out in Southey's poems his well-known lines running thus," repeating the lines he had composed. "Can you tell me when he wrote them and where they are to be found?"

"I do not remember to have met with them before," replied the publisher, "and there were only two periods in Southey's life when such lines could possibly have been written by him."

"When were those?"

"Somewhere," said Mr. Fields, "about that early period of his existence when he was having the measles, or cutting his first teeth, or near the close of his life when his brain was softened. The versification belongs to the measles period, but the ideas betray the idiotic one."

The company roared.

FLAWS IN CASTINGS.

To conceal a flaw in an iron casting is a much more serious matter in Canada, and might well be in the United States, than iron founders would be willing to believe. In a Canadian law suit lately, a jury gave a verdict for damages of £1,800 against the defendants for injury caused by the failure of a walking beam on the steamer "Sovereign," of the Ottawa Navigation Company. A broken section of the beam was produced in court, and it was shown that an iron nail had been driven into a hole in the casting, and its presence concealed by subsequent planing and painting over the surface. The flaw must have been a small one when an ordinary nail was sufficient to fill it, and the judgment seems somewhat harsh when we remember that the "dressers" of castings usually look upon the filling up of little blemishes as part of their vocation—whether with or without the knowledge and connivance of their employers it might be difficult to say. Doubtless, the practice is severely winked at, but after such a decision as this, iron founders would do well to be as sparing as possible in the use of blue putty, type metal, "boman tague," and other expedients for concealing defects.—R. R. Review.

Commercial.

TORONTO MARKETS.

Toronto, 15th July, 1897.

Dairy Produce.—There are few features of importance to note in the butter trade. Strictly choice dairy butter brings 12 to 12½c. in this market. Receipts have not been excessive, but a large percentage of the supplies coming forward show the effects of the recent warm weather, and are inferior. There is a good demand for creamery butter for the export trade; local merchants are quoting creamery at 17 to 17¼c. per lb. Cheese is quiet and steady in the local market and jobbers have made no change in quotations during the week. Eggs are rather easier at 9½c. per dozen; receipts have been large, while the demand is weak, as is usual at this season of the year.

Drugs.—No special movement has marked the week's trading in drug circles. Staple commodities have been steady in value. The New York opium market has been irregular, last reports quoting $2.40 for single cases. Quinine is steady at previous quotations. Collections are only fairly satisfactory.

Grain.—There has been considerable trading on the local grain market this week. The export demand for wheat has been strong, and Ontario merchants have made numerous shipments abroad during the week via Montreal at a basis of 68 to 69c. per bushel at outside points. Reports received during the week have been very satisfactory, showing a marked improvement in the European situation, supposed to be due to less favorable crop prospects and weather on the other side, especially in Eastern Europe, Russian official reports making the crop of that country the poorest for years, while French estimates have been reduced. This demand has been sufficient to put up the prices of ocean freights, a New York advice stating that engagements for nearly 100 boatloads of grain have been made for July and August shipment two days in succession during the week for all kinds of grain. In the local market oats have been firm, and values are quoted 1c. per bush. in advance of last week. For peas there is good export enquiry, and all supplies coming forward are in active request; stocks are, however, limited. Rye remains quiet and steady, without change in quotation. Barley is dull and lifeless. Corn remains inactive.

THE VISIBLE SUPPLY.

The visible supply of grain in the United States and Canada, with comparisons, is as follows:—

	July 10, 1897.	July 11, 1896.
Wheat, bush.	16,609,000	47,220,000
Corn	15,425,000	9,188,000
Oats	6,949,000	8,228,000
Rye	2,007,000	1,455,000
Barley	801,000	768,000

The stocks in store at Port Arthur on July 3rd were 1,744,464 bushels, and there were received 272,560 bushels, and shipped 405,100 bushels, leaving in store on July 10th, 1,611,924 bushels.

Groceries.—A moderate trade is being done in general supplies. For sugars there has been an active demand from country points, and the preserving season is now in full swing. The alleged "combination" in the sugar trade of Toronto has attracted considerable attention, and is noted in another column. For teas there is moderate enquiry, and trade is not yet on a satisfactory basis. Canned goods remain quiet without special change.

Hides and Skins.—The Toronto hide market remains where it was last week, beyond the reach of tanners. Merchants are paying 8½c. per lb. for green cow hides. Few sales of cured hides have been made this week on local account. The top figure paid is 8¾c. per lb., although merchants quote 9c. per lb. Stocks of hides in Ontario and Quebec are not large, as numerous shipments have been made to the United States as a result of the general expectation that Congress will place a duty of 25 per cent. upon the importation of hides. Advices from the Western States report a quiet market, and stated that packers were endeavoring to effect sale of this winter's hides, but were meeting with poor success. Branded hides were firm, being sold close up to the kill. The close was quoted steady to firm, with native steers, present take off at 10¼ to 10½c., butt brands at 9¾c.; Texas, at 10 to 10¼c.; branded cows, at 9¼c.; Coloradoes, at 8¾ to 9c., heavy native cows at 9¾c., and light do. at 10¼c. On the local market lambskins are quoted at 50c., and pelts at 30c. For calfskins there is fair request with only moderate offerings; merchants are paying 11c. to the butchers for green skins. Tallow is dull and values remain at former low quotations.

Leather.—There appears to be some evidence of life in the trade. During the week several firms booked fairly large orders at the instance of Eastern manufacturers. It is hoped these sales are but the indications of a free movement for the autumn. Manufacturers are fighting any advance in the price of leather, and evidently expect to buy their material for the coming season on the basis of 7 cent hides. Green hides in Toronto are worth 1½c. above this basis, and unless tanners can secure the advance in price which dear material renders necessary, the outlook is not a pleasant one.

Provisions. — Trade continues to show marked activity. The demand for most lines of pork products remains good, and as a result of the smart trading done since the opening of the season supplies are getting into small compass. Lard is the exception to the rule and remains depressed at low prices.

Wool.—The situation still remains filled with uncertainty. The threatened duty has not yet been imposed by the United States Congress, and no one is in a position to judge when final action will be taken. Quotations are made only from day to day, and are subject to change at any time. For the best merchantable fleece wool merchants here are paying 21c. per lb., and are quoting rejects 16c., black wool 16c., and unwashed 12½c. per lb. The influence of the London sales which opened last week is being felt. With prices ruling at from five to 10 per cent. advance it adds strength to the situation here. The development of a strong demand for American account was a surprise to traders here, as the belief prevailed that the present series would receive but little support from American buyers. Advices from Australia would iindicate that wools in that country are in a stronger statistical position owing to the severe drouths at present prevailing. The lambing season is expected to be curtailed considerably, with a corresponding decrease in the size of the coming clip.

MONTREAL MARKETS.

Montreal, 14th July, 1897.

Ashes.—European advices are still of a depressing character, with a limited demand, and there is no improvement in values. We quote No. 1 pots at $3 to 3.05, seconds $2.80 to 2.85, and pearls nominal at $4.25 to 4.35 per cental.

Cements and Firebricks.—Cements are moving out fairly in moderate lots at the quotations which have been in force since the opening of the season. Bricks are also unchanged in price. The receipts for the week ending today are 6,120 brls. of Belgian cement, and 16,000 English firebricks.

Dairy Products.—Cheese shipments last week were again heavy, aggregating 100,417 boxes, some 47,000 boxes ahead of the same week last year. London took the largest quantity, some 42,000 boxes, Liverpool 17,000 boxes, Bristol 15,000 boxes, Leith 10,500 boxes, Glasgow 9,000 boxes, and smaller lots to Belfast

and Newcastle. The shipments for the season are now ahead of same date last year by about 130,000 boxes. The market is a shade stiffer than a week ago, choice Western being now quoted up to 8¼c., and Quebec 7½ to 7¾c. per lb. Exports of butter continue to show a gain on last year, the shipments for last week having been 6,977 pkgs., against 1,247 pkgs. same week last year. The market is exactly on the same level as last week. Eggs are steady at 10½ to 11c. per dozen for choice.

DRY GOODS.—The heated spell favored the continuance of a pretty steady sorting demand for light fabrics, and the bulk of the wholesale business doing is still of this character, with a fair quantity of fall orders being booked, though there is no very general disposition among retailers to buy far ahead. Several leading houses consulted state, however, that business with them is ahead of this time last year in volume. Remittances are reported to be of a somewhat dragging character.

GROCERIES.—A decided improvement is at last reported in the demand for sugars, particularly for yellows, and both refineries are now reported well occupied. Quotations remain as last revised, namely, 4c. per lb. at factory for standard granulated, and 3¼ to 3¾c. for yellows. Further moderate lots of foreign refined beet sugar are reported coming forward, and we have heard a jobbing quotation made at $3.80 per cental. It is altogether probable that the local refineries will put a second grade granulated on the market to compete with these imported goods, and thus try and shut them out. A fair number of new Japan teas are offering at from 16c. up, but the market for teas at present is somewhat dull. California advices indicate good prospects for the fruit crop, though there have been some cold nights, and the indications are hardly so promising as earlier in the season. The following figures are given as approximate laid down quotations for October delivery of raisins in wholesale lots: 5¼c. for two-crown, 6¼c. for three-crown, and 7¼c. for four-crown. Apricots will be probably 2c. lower than opening figures last season; prunes are expected to rule about the same as last year. Canned vegetables are good value, tomatoes being held at 80 to 85c. in a jobbing way, peas 80c., corn 60 to 65c.

HIDES.—The local combination of leading hide dealers maintains the quotations for beef hides as reduced last week, claiming that, with the proposed American duty in view, 7c. per lb. is as much as can be paid for No. 1. There is still some opposition buying, however, at 7½ and 8c., it is said, and advices from American points indicate a firm market. The company shipped some 18 to 20 car loads of hides and calfskins to the United States during the past fortnight or so, and state that all receipts since have been absorbed locally. Calfskins continue to be bought at 8 and 6c. per lb. respectively, and lambskins and clips at 25c. each.

LEATHER.—The recent reduction in hide quotations by local dealers has not helped trade in this line, as it has tended to unsettle the ideas of shoe manufacturers, who are disposed to hang off still longer from buying in hopes of lower prices, but tanners claim they cannot get the supplies of hides they want at the reduced figures, and that present leather prices are, as it is, lower than they should be relatively. The American market is reported firmer, notably for Spanish sole and light crop, with good English demand, and some good sales of domestic sole are reported here to England. We quote:— Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c.; Scotch grained, 30 to 35c.; western splits, 20 to 22c.; Quebec do., 15 to 17c.; juniors, 14 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

METALS AND HARDWARE.— We find little news to be picked up in these lines just now, and the only recent noteworthy transaction we hear of is the sale of a 300-ton lot of Hamilton pig iron to a Sherbrooke concern. English advices report further stiffening in Canada plates, owing to strikes, and some makers are reported shut down. We quote:— Summerlee pig iron, $17 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16.50; No 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $17.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2 15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. .24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates —Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D.Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 35 to 3.50; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1.90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.60 to 4.75; antimony, 8½ to 9c.

OILS, PAINTS AND GLASS.— The recent hot weather has somewhat stimulated the demand for Paris green, and prices are firm at quotations below. Linseed oil and turpentine are both easier a cent. There are reports of failure and shutting down among German glass manufacturers, and some claim to believe in the possibility of firmer prices; but no change has developed locally as yet. We quote:— Turpentine, one to four brls., 41c.; five to nine barrels, 40c., net 30 days. Linseed oil, raw, one to four brls., 41c.; five to nine brls., 40c.; boiled, one to four barrels, 44c.; five to nine brls, 43c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½; No. 2, $4.25; No. 3, $3.87½; No. 4, $3.50; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4¼c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 13½c. in bulk; packages, 14½c.. window glass, $1.25 per 50 feet for first break; $1 35 for second break; third break, $2.80.

WOOL.—Woolen manufacturers are seemingly feeling better, and a continuance is reported of the fair sales noted last week, and at improved figures. The London sales now in progress opened at an advance, which has now developed to the extent of 10 to 15 per cent., and local dealers are now holding desirable grades of Cape wools at 16 to 17c., while no stock is available in this line below 15c. B.A.'s are also very firm, being now quoted at 30 to 35c. Of domestic wools there seem no supplies here of any note.

Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

IMPROVEMENT IN UNITED STATES AFFAIRS.

At the end of the fiscal year of the United States, Mr. Lyman J. Gage, secretary of the Treasury Department, finds in the state of the national finances bright signs for the future. He believes better times are at hand.

"The Government's financial affairs are in good shape," said he to a reporter on July 1st. "We have come to the end of the fiscal year, with a good record behind us and with brighter hopes for the future. I feel assured that by June 30, 1898, the Government's affairs will be even in better condition. At the end of the fiscal year 1896, one year ago to-day, the gold reserve was only $102,000,000, or just barely above the theoretical reserve of $100,000,000. There was a fear that before the year was over there might be very large exports, compelling the Administration to again issue bonds for gold. Now we not only have a gold reserve of $141,000,000, but there is not a cloud in sight as to its continuance approximately at the very comfortable level. This is the most hopeful sign that I see in the present condition of the Government finances, for when the country is all right and the Government all right the gold reserve is sure to be all right, and vice versa.

"The receipts of the Government have greatly increased during the past year, showing a general revival of business among the people. The total receipts for the fiscal year ending June 30 were $325,000,000. The total receipts for the year ending to-night have been $343,800,000, an increase of $17,000,000 or 6 per cent. The expenditures this year have been considerably larger than last year. For the year ending June 30 the expenditures were $352,000,000. For the year closing to-night they have been $365.849,000. Notwithstanding this increase of nearly $17,000,000 in the outgo, the income of the Government has been great enough to reduce the deficit, compared with a year ago, nearly $5,000,000.

"The closing of this fiscal year brings us near to the passage of a new tariff law, which will give business men settled conditions, we hope, for a long time to come. That it will also give the Government sufficient revenue for its needs, doing away with the deficit, we have satisfactory evidence. Temporarily, if the bill goes through as it now stands, there may be a lack of revenue. Efforts are being made, I understand, to provide for this immediate period when the cusom receipts will not be up to their normal by some temporary additions to the income from internal revenue sources. But even i these efforts should not prove wholly sucsuccessful, there is, fortunately, plenty of money in the treasury to tide over.

"We have an available cash balance of $137,000,000 without touching the $100,000,000 gold reserve, and this vast sum is many times more than will be needed, even if no additions be made to the future revenues beyond those provided in the bill as it now stands. This available cash balance can be used without doing any harm whatever in any direction, if need requires.

"At any rate, the business men of the country, who have been waiting for the passage of the tariff bill, as a signal to go ahead with their operations, need have no fear that any flaws in the Government finances are going to retard the work of restoring prosperity.

"Uncle Sam is all right. There is a general conviction throughout the country that some changes should be made in our currency and banking system in order to provide safer and sounder methods for the future. The business men have demanded some changes, both in the direction of better protection for the gold reserve, and for more adequate banking laws and distribution of currency. I am satisfied this demand will be met in good time by the passage of a bill which will correct the flaws in the present system and put the national finances and the currency and the banks upon a basis more in harmony with the most modern development of monetary science. This will be done, I believe, without the slightest disturbance of existing conditions and without any shock whatever to business.

"Everything is ripe, therefore, for a revival of business activity. Of course, there are still prophets of evil, who pick up and make the most of every trifling circumstance that helps their gloomy argument, but their voices are becoming fainter and fainter. The gospel of depression and discouragement is preached to empty benches, for the people are busy with their own affairs. Recognition of the fact that better conditions have come in many parts of the country and are fast coming in others is now widespread. It happens that I see people from every section of the country, and all of these without exception, though, of course, wit varying degrees of emphasis, give testimony to the improvement that is at hand."

A DEFEATED INSURANCE SUPERINTENDENT.

Webb McNall has met with crushing defeat. The man who thought himself greater than the Government, yet, who in spite of all his bluster and brag and bluff, deemed it inexpedient to try conclusions with the Federal authorities, has now received a knock-down blow from which he can scarcely recover. The decision of Judge Foster that the superintendent has no right to revoke the license of a company unless it has had judgment secured against it, and the judgment has remained unpaid for ninety days, is not only a victory for the Metropolitan, but also effectually disposes of McNall's right to bar out the New York Life, the Mutual Life of New York and the Connecticut Mutual. The Kansas superintendent will now have time to prepare his defence in the damage suits those companies are bringing against him, and to make his peace with the farmers, who by his stupidity, have been deprived of the opportunity of obtaining indemnity for their ruined crops. He will also have time to reflect that the ass in the lion's skin who frightened all the other animals lived a long while ago when the other animals were unsophisticated, and that such experiments in these latter days are apt to end unpleasantly for the ass.—Investigator.

HUDSON'S BAY COMPANY.

On Tuesday, July 6th, a general meeting of the Hudson's Bay Company was held in London, England, when a report from the governor and committee of the company was laid before the shareholders. The report was as follows: "The governor and committee beg to submit to the proprietors the annual accounts, which show a profit of £60,917 7s. 6d., to which is to be added the sum of £26,082 4s. 7d. brought forward from last year, making a total of £86,999 12s. 1d., and it is recommended that a dividend of thirteen shillings per share be paid for the year ending 31st May, 1897, leaving a balance to be carried forward of £21,999 12s. 1d.

"The company's importations during the last season were satisfactory in quantity as compared with those of previous years, but mainly in consequence of a mild winter, and the absence of any important demand from America, prices of furs at the company's January and March sales showed a general decline on the sales of 1896. It is, however, gratifying to your board to announce that the profit is on the whole not disappointing.

"It is impossible to indicate with any certainty how prices may range in future, but the low level of values now reached for most of the furs imported by the company gives ground for expecting an improvement if the course of business in Europe and America should be satisfactory.

"The board are glad to be able to state that better results in other branches of the company's business have in some measure compensated for the decline in the prices of furs. The land account shows that the receipts for instalments, interest, rents, etc., are a little better than last year, being £21,961 1s. 4d. in 1896-97, against £21,520 19s. 9d. in 1895-96, while there is a reduction in taxes of £967 14s. 2d., but a sum of £1,448 1s 3d. has been paid to the Government as the company's proportion of charges for surveys of lands, bringing the total expenditure somewhat over that of the preceding year.

"Sales of land are slightly better; those of farm lands being 10,784 acres for $53,277 (averaging $4.94 per acre), as compared with 9,299 acres for $52,410 (averaging $5.63 per acre), and of town lots, $36,480, as against $32,685 in 1895-96.

"The decrease in the average price realized for farm lands arises from a shrinkage in values, which the board trust is only of a temporary nature, the reviving prosperity of the country, and increased immigration warranting this assumption."

THE STORE LOAFER.

The store loafer is more of a guest than a customer. Men who wear out the seat of their pants on soap boxes or sugar barrels are likely to have little else in their pockets than four fingers and a lazy thumb. A chair in a store is an excellent piece of furniture—if the right person holds it down. Customers as a rule are not anxious to have the nose of a loafer over their shoulder when making a purchase or paying a bill. Idle men and empty pockets have no right to make a poultry roost of a counter. There are more buzzards that dine on scandal hatched in the idler's corner than all the guns in the country could shoot. Where the loafer does his whittling scandal is retailed by the ton. A store loafer and a bar-room bummer, if shaken out of a common sack, would be a case of twins, or a double-yolked bad egg. To make a store comfortable for customers is one thing—to make a smoking divan for gossip is another. Merchants who encourage loafing are simply raising caterpillars to lunch on their lettuce. The turtle that rolls off a log into a creek to get out of the rain, has more sense than the merchant who thinks that a circle of pipes around his store means more business than smoke.—The Age of Steel.

MORE VESSELS, LESS TONNAGE.

A decrease of wooden ship-building is shown in the United States. And the latest authentic figures show that while more vessels in all were built in that country in 1896-7, the tonnage was less. During the fiscal year ended June 30 there were built in the United States and officially numbered 729 vessels of 177,643 gross tons, compared with 709 vessels of 203,977 tons for the previous year. The decrease is almost wholly in wooden tonnage, which, for 1897, amounts to only 64,940 tons, compared with 94,715 tons for 1896. Of the total construction, 347 vessels of 113,065 tons were steam vessels, compared with 322 of 134,947 tons for the previous year. Steel steamers built on the great lakes numbered 15 of 55,866 tons, compared with 24 of 56,020 tons for the previous year. The size of lake vessels increases steadily.

Thirteen vesels with seven million feet of lumber consigned to the Peter Lumber Company, came into port at To ..
Ohio, on July 2nd. Al. Peter, the manager, "hustled" in large consignments from Canada to avoid the proposed new tariff on logs and lumber.

50 YEARS The Year 1897 is the SEMI-CENTENNIAL

OF THE

Canada Life Assurance Company.

ESTABLISHED 1847.

President, A. G. RAMSAY, F.I.A.
Secretary. R. HILLS. Superintendent, W. T. RAMSAY.

Count Not The Cost

Of keeping in force an Investment Policy of insurance, as, whether the insured lives to the completion of the investment period or not, the amount payable to him if he survives the period selected, or to his beneficiary, if his death occurs prior thereto, is a large return for the amount invested.

The Compound Investment Policy
ISSUED BY THE

North American Life Assurance Co.

Toronto, Ont., is a very attractive, liberal and remunerative form of Insurance. **It specially provides for the loan** to the insured, if desired, of all premiums beyond the 10th, and should death occur thereafter, the full amount of the policy becomes payable, premiums loans, if any, being cancelled. **It further provides for the return** of the 11th and subsequent premiums, together with the full face of the policy, should death occur after the 10th year and within the investment period selected. Pamphlets explanatory of this advantageous form of investment insurance, and copies of the last annual report of the Company, furnished on application to

Wm. McCabe,
Managing Director.

British Empire Mutual Life Assurance Company Of London, Eng.

DECISIONS IN COMMERCIAL LAW.

BERTRAND v. CANADIAN RUBBER CO.—The plaintiff assignee for the benefit of creditors of J. Lamonte brought this action to have a mortgage of Lamonte's stock-in-trade, made in favor of the defendant company, declared void as against creditors of Lamonte The defendant company were creditors of Lamonte, and the plaintiff's allegation was that the mortgage was made when Lamonte was in insolvent circumstances and unable to pay his debts in full, with intent to give the company a preference over his other creditors. The first question was whether Lamonte was in insolvent circumstances or unable to pay his debts in full when he made the mortgage. Lamonte had commenced business about four years before his assignment, with a capital of $500. When he made the mortgage he had a surplus, upon his valuation of his stock, of about $1,000, besides a piece of land valued at $750. He was carrying a stock of $9,000 or $10,000. A creditor, as his claim was about maturing, notified Lamonte that he insisted upon payment; other considerable sums were already overdue, or about maturing, which it was impossible to meet at once. Taking all the circumstances into consideration, the inference was that the debtor could not, at the time of making the mortgage, dispose of his assets for sufficient to meet his liabilities, and he must be considered as having then been in insolvent circumstances. The mortgage to the defendant company was made with intent to give that company a preference over other creditors. The suggestion to secure the company came from the debtor voluntarily. There was no pressure. The whole scheme was intended for the benefit of the creditors to whom the security was offered. The mortgage must be declared void as against the plaintiff, and he would be entitled to the proceeds of the mortgaged property brought into court. This is a judgment of Judge Killam of Manitoba.

WILSON v. LYMAN.—Action by Archdale Wilson & Co., wholesale druggists, at Hamilton, against Lyman Bros. Co. (Limited), wholesale druggists, at Toronto, for an injunction restraining the defendants from imitating and infringing on the plaintiffs' trade marks, labels, envelopes and boxes, and from imitating and infringing upon the pads manufactured by the plaintiffs, and sold under a registered trademark consisting of the words "Wilson's Fly Poison Pads." The defendants described their goods as "The Lyman Bros. & Co. (Limited) Lightning Fly Paper Poison." The word "pad" only appeared upon the envelopes as printed at the top, as follows; "Three pads in a package, five cents." "Six pads in a package, ten cents." The plaintiffs' contention was that the defendants should be restrained from using the word "pad" in any form upon the package. The defendants' contention was that unless the court had the right to restrain the defendants from putting up fly paper in the form of pads, there was no right to restrain them from stating on the envelopes that there were pads inside. Rose, J., held that the plaintiffs were not entitled to have the defendants restrained from using the word "pads" as they did upon their envelopes.

A party left Winnipeg in June for exploring and mining purposes in Alaska or Farthest West Canada. All the members of the party reached Lake Linderman, Yukon, in safety. They will probably not reach their destination, the Clondyke district, until early in August, as the trip by lake and river usually takes six weeks.

Mercantile Summary.

THE Manitoba Trusts Company, of Winnipeg, has declared a dividend for the half year at the annual rate of six per cent.

WALSH & GURD, Tilbury, Ont., grain merchants, intend, it is said, to erect a new grain elevator, with a capacity of 20,000 bushels.

LATE advices from Victoria, B.C., say that only thirty Victoria sealing schooners will go to Behring Sea this season, compared with sixty-four last year. The low prices obtained for last year's catch is the cause.

THE Frost Wire Fence Company of Cleveland, Ohio, is desirous of establishing a branch factory in Ontario. A representative who is now seeking a location says that they will start with a business of $200,000 a year, and would employ about 25 skilled men.

A FIRM of Montreal grocers, E. Bergeron & Frere, recently failed, have offered 25 cents cash, on liabilities of $3,000; but the offer has been declined, and they are likely to be wound up.——A demand of assignment has been made upon Miss Albena Fortier, milliner, Montreal.

THE Winnipeg *Commercial* says that contracts for the first fifty miles of the Crow's Nest road grading have been let. Strevel gets the first five miles from Lethbridge. Foley Bros. and Doheny get thirty-five miles, McCrimmon five miles, McArthur five miles. The first sod was turned at Lethbridge.

FROM the ancient capital is reported the failure of D. R. Gagnon, a young druggist, who started for himself about four years ago. He owes $2,600, of which about $1,800 is due to one house.——Joseph Bordeleau, grocer, of the same city, in business only a few months, having been previously a clerk, has also assigned, and will be wound up. Liabilities are $1,500.

ACCORDING to the Selkirk *Journal* a rich find of gypsum was made this month on Mr. F. C. Elliott's claim in the Lake St. Martin district, north-east of Fairford. A sample about ten or twelve inches square and three inches thick was brought in by a man named McRae, and a test showed it to be free from foreign substances. The end of the vein, where first discovered, is about six by three feet, and the vein has been traced for four miles.

MUCH energy has been put into arrangements for the fair to be held in Brandon, Manitoba, on August 3rd, 4th and 5th. Two special trains will run into Brandon on the fair dates, from the Great Northwest Central, and excursions will also be run over both the main and branch lines of the C.P.R. The Northern Pacific will also bring in its crowd of excursionists. The different companies for these special trains have the association's guarantee that a certain number of tickets will be sold. Some exhibitors have already arrived from North Dakota

THE New Denver *Ledge* tells of Col. Ray's visit to Kaslo, B.C., and of what he said about the Dardanelles group of mines, for which a boiler, compressor, pump, wire rope, etc., had been ordered and were expected last week. The development already done consists, he says, of 220 feet of shaft and 1,300 feet of drifts and raises. Two hundred and fifty tons of ore giving smelter returns of 265 ounces silver and 26 per cent. lead, and 70 tons of second grade ore, returning 76 ounces silver and 16 per cent. lead, have been shipped, and about five hundred tons of ore is now on the dump.

THE Truro *News* is informed that the Cochran Hill Gold Mine, N.S., which has been idle these two years, has started again, under F. Christie, C.E. Also that the Weston Bros., who own the Crow's Nest mine, near Melrose, are so convinced from their last year's explorations of the value of this mine that they are building a new 20-stamp mill. The Richardson mine, Isaac's Harbor, yielded for June 282 ozs. So great has been the travel to and from these busy mining camps during the past four months that a new coach line from James River station to Sherbrooke, near Melrose, has been started.

COMMENTING on the recent shipment of 7,000 tons of steel rails from the Maryland Steel Works, to English purchasers in Calcutta, British India, the Philadelphia *Record* says: "If we can meet English competition in the sale of steel rails and pig iron in India, Australia and other markets, it is hard to see why we should not go farther afield. If steel rails why not steel ships? We have the ore, the coal, the skill; what more do we need except the liberty to trade?" Exactly: *except* liberty to trade.

AT the annual meeting of the shareholders of the Brockville, Westport and Sault Ste. Marie Railway, held in Brockville, July 16th, directors for the ensuing year were elected as follows: James G. Leiper, Philadelphia, Pa.; Samuel Hunt, Cincinnati, Ohio; Reed A. Williams, jr., Philadelphia, Pa.; W. R. Cole, Robt. Bowie, G. H. Weatherhead, D. Derbyshire, D. W. Dorency, James Mooney, Brockville; W. Fredenberg, Westport; R. G Murphy, Elgin. At a meeting of the directors the officers were elected as follows: President, James G. Leiper; Vice-President, W. H. Cole; General Manager, Samuel Hunt; Treasurer and General Traffic Agent, James Mooney; Secretary, E. A. Geiger.

THE contract will be awarded next week for the construction of the Richelieu Valley Railway, in the Province of Quebec. The road will be twenty-three miles in length, running from Iberville to a point in the parish of St. Thomas, where it will connect with the Canada Atlantic Railway, passing through Clarenceville, Henryville and other villages. At Iberville, the Richelieu Valley will connect with the main line of the Central Vermont, and the terminus of the United Counties road. The Richelieu Valley Railway was voted a subsidy by the Dominion Government last session of $3,200 a mile. The road also received a considerable land grant from the Quebec Government.

THE following are country failures, etc., reported in the Province of Quebec since last issue: A. E. Faucher, formerly a traveller for a Quebec crockery house, started a general store business in Fraserville, a year ago, and has already had to assign.——Lucien Beaudet, a young farmer of St. Jean d' Eschaillons, with no experience, but plenty of ambition for an easier life than farming, began storekeeping two years ago. The usual result has followed, insolvency.——Eloi Perrin, general dealer, Isle aux Coudres, recently insolvent, has succeeded in settling liabilities of $1,600, at 35 cents in the dollar, cash.——H. Blanchette, another recent insolvent, at Val Racine, is offering 25 cents, cash, on liabilities of about $5,000,——G. H. Kerr, formerly in the fruit and confectionery business at Sherbrooke, moved to Lake Megantic in 1893, and started a general store and auction business. He attempted too much for his capital, and becoming overstocked opened a branch at Milan, which he afterwards sold. He has been slow, and sued of late, and a demand of assignment is made upon him by a Montreal furniture house, owing about $4,500.——A demand of assignment has been made upon Goddu Freres, grocers, St. Hyacinthe.

Debentures.

Tenders, sealed and addressed to the undersigned, and marked on envelope "Tender for Debentures," will be received by the Council of the TOWN OF CORNWALL, until Six o'clock, afternoon, of

FRIDAY, AUGUST 6th, 1897,

—FOR THE—

PURCHASE OF DEBENTURES

of said town, amounting to Ninety-eight Thousand ($98,000) Dollars, and issued for the purchase of Waterworks.

Said Debentures are payable in thirty (30) equal annual instalments of principal and interest, at the Office of the Ontario Bank, in Cornwall, on the first day of August in each year during their currency.

The highest or any tender not necessarily accepted.

George S. Jarvis,
Town Clerk.

Town Hall, Cornwall, July 14th, 1897.

Mercantile Summary.

The Quebec city electric cars were tried on Monday last, and ran successfully. The road is now being run by electricity.

One Montreal burglar, who stole watches and jewelry, was sentenced last week to four years in gaol; he was an expert hand. Another, apparently a novice, got three months.

The American Institute of Instruction held its annual convention in Montreal since our last. Dr. Harper, of Quebec, delivered an address of welcome as president of the Teachers' Association of Quebec.

According to Prince Edward Island journals, the Merchants' Bank of Halifax, the Merchants' Bank of Prince Edward Island, and the Bank of Nova Scotia, have reduced the rate of discount on American currency to one per cent.

A jobbing grocer, of St. John, N.B., James Dillon, has assigned. He was closed several weeks ago under distraint for rent, and the estate will yield almost nothing for general creditors, it is said. Liabilities are some $5,000, with no assets of consequence.

The Messrs. Folger, of the St. Lawrence River Steamboat Company, have notified the secretary of the Dominion Commercial Travellers' Association that a reduction of 20 per cent. on regular rates will be made to knights of the "grip sack" using their line.

There is excitement in Ottawa over the resignation of a minority of the city council because the majority voted to purchase two steam fire engines of an American make. The objecting members hint that the majority were improperly influenced in the matter of the vote.

At a recent meeting of creditors, J. S. Wells, general merchant and lobster packer, of Whitehead, N.S., made an offer of 50 cents on the dollar, 20 cents payable in January and 30 cents in July next; no security. He owes $7,500, and shows nominal assets to the same amount, composed largely of book accounts.

A Montreal boot and shoe merchant, W. E. Short, who assigned the other day, was arrested at the instance of Messrs. Rochette, Dion & Co., wholesale boot and shoe manufacturers, Quebec, on a charge of obtaining goods under false pretences. Mr. Short denies that he misrepresented his financial condition before his assignment, and gave bail.

It must be some months since a man named Carl Bauer raised a $5 cheque on the Bank of Hamilton to $500, and by an adroit ruse got the latter sum placed to his credit in the Imperial Bank of Canada, Toronto. On Monday last, he came up before the Toronto Police Magistrate for sentence. The Magistrate said that, in consideration of the amount taken and the fact that no restitution had been made, a light sentence could not be imposed. Accordingly, he sent the prisoner to Kingston for three years.

It has been known that illicit distilling prevailed in various parts of Quebec, and the recent increase in the duties on imported spirituous liquors seems to have stimulated this as well as the liquor smuggling so extensively carried on in the Gulf of St. Lawrence. In Quebec city a few days ago a large illicit still was found in full operation in the upper part of an old house. This week it is learned that a group of similar stills has been seized at Stoneham, some twenty miles from Quebec, away up in the mountains.

We learn from the Ottawa *Journal* that Mr Alfred Akeenlindh, the local immigration agent of the Department of the Interior, has left for the West, in charge of a party of delegates from the United States, which he has induced to come to Canada, and to visit and report upon the Territories. They number about sixteen, and in addition there are several families going out joining friends or acquaintances already out, principally in Alberta. The delegates come from New Hampshire, Connecticut, Pennsylvania, Wisconsin, Illinois, Minnesota, North and South Dakota. The visit will last about a month or thereabout.

Nova Scotia gold mining shows much activity and bright prospects. About the middle of the present month, Dr. John H. McKay and Geo. W. Stuart returned from Sherbrooke, Goldenville and Wine Harbor, and reported developments on the Napier property at Wine Harbor most encouraging. A trial lot of rock from one lead gave 17 dwt. per ton. Goldenville is now a busy mining camp, besides the Bluenose and New Glasgow Co.'s producing regularly their large bricks. Geo. Hirschfield has recently leased from Mr. Stuart a small area, from which he took for the month of June, 228 ounces of gold, netting him a profit of $3,000.

Here is what the editor of the *Canadian Magazine* thinks of our much-praised and very modern Ontario school system: "Our high schools are robbing Ontario of her brightest and best. Go through the towns and cities of the United States and you find bright young Canadians everywhere. What sent them there? My answer is: Our high-school system. Go through Canadian towns and cities and you find them filled with starving doctors, lawyers, pedagogues, and civil engineers. Who took all these from the plow, the bench, the machine, and the counter, and sent them out to be consumers of wealth instead of producers? I am fain to return the same answer."

When so many people are trying "cheap" assessment life assurance, on the pretext that it is good enough for temporary assurance, and that they cannot afford to pay more, let us see what economic results can be attained by paying a fair rate to a good old line company. We read the other day of a policy issued by the Mutual Life of New York to Julius Fehr, of Hoboken, N.J., in March, 1860, for $1,000. Mr. Fehr was then thirty-five years of age, and his annual premium was $26.67. This amount was paid in cash each year by the insured, until at his death $994.19 had been paid in all. But the dividends had increased more rapidly, and at the time of the death of the insured amounted to $1,194. or $199.81 more than he had paid to the company in premiums, and $194 more than the face of the policy itself.

The Baie de Chaleurs Railway, which has been so prominently before the public for many years, says the Montreal *Star*, is not to be allowed to fall into disuse if the management of the Atlantic and Lake Superior Railway Company has to say the word. Mr. J. M. Shouley, its chief engineer, has just returned from the Gaspesian Peninsula, and he makes a very encouraging report. For some time a staff of workmen have been at work cleaning out the cuts and ballasting the road from Metapedia to Caplin, some eighty miles. It is hoped that this work can be completed within a couple of months. The route for the extension of the road to Paspebiac, another twenty miles, has been located finally, and the work of grading has been given out to Messrs. Perrault & Gervais, who are to start work immediately. The lumber and pulp wood industry are being developed rapidly.

Mercantile Summary.

THE barque "Thomas Perry," of Yarmouth, N S., 1,192 tons, has been sold. Her new owners are parties in Westzaam, Holland.

IN St. John, on Saturday last, five shares Bank of New Brunswick stock were sold at auction for 160½ and 161½ premium, ex-dividend.

BUILDING operations are very active at Amherst, N.S. There are nearly thirty new buildings going up, besides additions to others, the whole valued at about $65,000.

THE Owen Sound jewellers are going to give their clerks and themselves a half holiday every Friday afternoon during the summer months. This is an example worthy of imitation.

A TELEGRAM from Ottawa, dated Monday last, says that the Government is considering the question of imposing a substantial royalty on all gold taken out of the Klondyke gold fields in the Yukon country, where millions are got on the shores of the streams by washing the sand.

ACCORDING to a telegram of Monday last from Christiania, the Customs Committee of the Norwegian Storthing has adopted a report proposing the introduction of differential tariff duties on several agricultural products, and giving greater protection to small manufacturing interests.

CANADIAN railroad earnings continue large and are greater than the earnings for the corresponding period last year. From July 7th to July 14th Canadian Pacific shows the following:

1897	$477,000
1896	409,000
Increase	$68,000

The Grand Trunk traffic earnings cover the period from July 8th to July 14th. They are as follows:

1897	$379,299
1896	373,038
Increase	$6,261

MUCH interest centred in the trial at the Barrie police court, on Tuesday last, of two notorious burglars named Clark and Maloney, who have been robbing various northern villages. They were found guilty, and sentenced to ten and seven years respectively in Kingston. While these sentences are regarded as none too severe, the public would be better satisfied were their still more troublesome pal, McLean, along with them. McLean was in custody at Toronto, but escaped last week by prying apart the bars of the cell. Clark conducted his own defence and that of Maloney, and did it cleverly. Both prisoners took their trial like old hands. The only emotion shown was when Maloney shed a few tears on hearing his sentence.

THE name of the Toronto Industrial Fair, if we may credit the enormous posters now on the city walls, is for the nonce changed to the Victorian Era Jubilee Exposition. Maybe this is because there are to be added to the usual attractions reproductions of some of the events and situations as they occurred in the Queen's Jubilee procession in London. Anyhow, the Fair, which will this year open on 30th August, and last till the 11th September, will be as usual a national exposition of Canada's resources. Several of the buildings devoted to displays of machinery and the products of industry have been remodeled and improved. Consequently, the exhibits of machinery and machines in motion will be more numerous this year than ever before.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT" By W. H. PRESTON, (President of National Association of Credit Men.)

● ● ●

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

A special meeting of the Montreal city council is called for to-day to consider the proposition to reduce the special tax on Chinese laundries from fifty to twenty-five dollars.

According to an American journal, the State of Nebraska lifted $30,000,000 worth of mortgages from her farms last year. She ought to lift some more this year, judging from the prospect of her crops and those of Texas.

It is much to be regretted that the opening this week of the Winnipeg Industrial Fair was spoiled by heavy rain. But the city was full of people, and we trust to hear that the fair was a great success, as it deserved to be.

There is only one failure to tell about this week in Manitoba. A. F. Geddes & Co., grocers, Winnipeg, have assigned. They commenced business there in May of last year. A short while ago one of their creditors entered suit for an account, so the firm made an assignment.

Another failure in the bicycle line is that of The Ranger Cycle Co. of this city. The company was incorporated last February with a capital of $5,000, half of which was subscribed. Now their assignment has been made, and they owe $1,000, with assets of about $500.

The President of the Great Northern Railway from St. Paul to the Pacific coast, Mr. James J. Hill, says the road will ship many millions of bushels of wheat from the Northwest to China and Japan by way of Seattle, and he predicts that Northwestern farmers will get better prices for their wheat.

The Ingersoll firm of F. Bowman & Co., sporting goods merchants, have assigned. In 1895 this firm bought out Henderson & Co., and for some time past have done little else but repair bicycles. Outside of this business has been very dull, and of late drafts passed upon them have been returned dishonored.

Several members of the Quebec Cabinet have been visiting the northern part of that province beyond Labelle. Hon. Mr. Rolland, the president of the Colonization Society, stated that the ministers promise to give the question of roads for the settlers prompt consideration. Indeed, in order to help further colonization they must give roads to the settlers.

Ottawa circles are excited over the running away to the States of E. T. Hubbell, the junior partner in Rogers & Hubbell, brokers and private bankers, taking with him, it is supposed, a lot of clients' money. Alderman Rogers declares that he will make good any shortage, which is now estimated at several thousand dollars.

A Toronto baker has come to grief in the person of James Wilson. He began business in 1881, since which time he has worked up quite a large trade. A few years ago, however, he bought his present premises for $14,000, and in addition spent $2,000 on improvements. This move, coupled with losses by bad debts, has compelled him to assign. He owes about $7,500, and has $3,700 assets outside of his real estate and building.

The John Eaton Company, of Toronto, according to a statement placed before creditors yesterday, owe $136,178, and have assets of only $34,350. This enormous deficiency is partly caused, probably, by their banker holding certain assets as security. It is noticeable, however, that relatives of the firm have claims amounting to $39,726. The sterling liabilities are $22,045; Toronto creditors are due $35,329; sundry creditors, $19,492, and preferred claims, $1,153. Inspectors were appointed, and the estate is to be liquidated under Mr. Clarkson. Those present at the meeting were 49 in number, representing $53,825.

According to a New York despatch of 20th instant, the canal boat "Gamma" has made a record trip from New York to Toledo, on Lake Erie, and return. She is one of a fleet of steel canal boats which began running from Buffalo to New York in 1895. The "Gamma" left New York on June 20th with three transports in tow, carrying 4,000 barrels of sugar bound for Toledo. The trip was made up the Hudson river to Troy, and thence through the Erie Canal to Buffalo and along Lake Erie to Toledo. Her cargo was unloaded and a cargo of grain taken on. She made the round trip, between 1,500 and 1,600 miles, in twenty-two days, nineteen hours.

At whatever cost, we must accept the principle of free trade within the Empire which was enunciated at the Ottawa conference, says the *African Review*. "It is preposterous that we should bind ourselves not to allow our colonies to grant preferential advantages to English imports because it does not suit the convenience of Germany or Belgium, especially when these two Powers, or any other interested Powers, could put themselves on an equality with Great Britain were they to remove duties as against colonies—Canada in particular, so far as the present issue is concerned. We have little doubt but that South Africa would quickly follow the lead of Canada."

Importers have received notice from the Customs Department at Ottawa that on and after August 1st persons making entry of goods under the reciprocal tariff must furnish a separate invoice of articles entitled to such entry, with a declaration annexed from the exporter or his agent, made before a notary, commission, or chief municipal officer, of a city or town, or a British consul or the secretary or president of a Chamber of Commerce as to the value and origin of the articles. This is in addition to the declaration of the importer or his agent now made on the face of the entry papers. Importers must also see that their invoices, if made out at lower prices than fair market value, when exported to Canada, shall also show both the reduced rate and fair market value when sold for home consumption.

The husband of Mrs. A. Gilbert died in Brantford a few years ago and she has continued his fancy goods business from then until now. Not much headway has been made, and falling behind in payments, her creditors held a meeting the other day, when she offered to compromise at 25 cents on the dollar, and it is likely her offer will be accepted. A statement submitted at the meeting above mentioned shows her assets to be about $2,000, and liabilities $3,400.——The firm of Moore & Kerr, Orillia, is really composed of the wives of two men of those surnames. Some years ago, Moore & Kerr found themselves in financial troubles, and since 1893 have conducted a general store business in the name of their wives, whose business affairs they managed. Last month Dun and Co.'s traveller waited on them to ascertain the standing of the business, but was met with a refusal. Now they have assigned with liabilities amounting to $14,000 and assets $12,000.

People who are going wild over the gold prospects in the Yukon portion of Canada, near the Alaska boundary, should be warned. A man of experience, P. B. Weare, vice-president of the North American Trading Company, says: "The boats which sail from Seattle northward this month are full—every passage taken. That means that anyone who wants to go to the Klondike must wait for the August boats. The journey, 7,000 miles, people talk about as if it was walking across the street. They don't realize what Alaska is, what the Yukon is. They will need a map to convince them of the truth that it is longer than a trip to Europe to reach the Behring Sea and the south of the Yukon, that by the time they strike the Yukon the Arctic winter will be upon them. On September 25th the weather settles and the Yukon River will be frozen solid until next May."

A LOT OF MINING ITEMS.

Mr. Hamilton assayed rock from the B. B. B. mine, owned by Bell, Boyd & Brown, which went $18 68½ to the ton. This is only a surface assay.

The hoisting machinery for the Black Sturgeon mine has reached Rat Portage. Location A. P. 301 is preparing its stamp mill, and the same may be said of the Neepawa mine.

Three Brandon gentlemen, Mr. W. F. Wilson, of Wilson & Smith; Mr. A. E. Phillip, of Phillip & Cameron, and Mr. J Keddy have returned from the Rat Portage mining districts, where they were inspecting properties in which they are interested.

Six men are at work on the Mandarin camp, which is one of the Black Sturgeon group of mines, and is being opened up by Mr. Joseph Herman. No. 1 shaft has been abandoned, and operations are going on upon a new vein, which promises to be very rich. Mr. Richard Hall is out at Camp Bay with an outfit of men opening up a location which he considers is going to be a "world beater."

A party left Rat Portage this day week per steamer, with an outfit of men for Rout Bay. They will thoroughly prospect the Medicine Ledge property, as well as strip the vein. Mr. T. Walsh left on Thursday morning for Shoal Lake with a development outfit. This is the third outfit referred to as leaving on Thursday to commence operations on different properties. Col. Clark, of South Africa, is out on the steamer "Sport" visiting a number of different properties.

A brick of gold from Quesnelle Forks, B.C., attracted some attention in New York last week. A paper of Friday says: "The agents of the Bank of Montreal, in this city, to-day received by express a gold brick weighing 4,150 ounces, and valued at $72,000. The brick will be sent to the assay office for reduction. It comes from the mines of the Cariboo Hydraulic Mining Company, at Quesnelle Forks, B.C., and is the largest piece of yellow metal seen in this city in many a day."

The lucky owner of HW 271, Roche Oleson, of Wabigoon, has a find in the Manitou district between Nelson and Calder lakes. After a blast at the depth of twelve feet, the gold lies in nuggets, which can be seen sticking out of the rock. Adjoining this, on the north, lies location HW 299, belonging to Mr. Polson, and this also is rich in free gold. From SV 2, a property about three miles from Wabigoon, Mr. D. A. Larson has some very nice looking samples of ore, highly mineralized, and resembling closely that from the Northern Queen, and also the British Columbia ores.

Mr. Margarch, the Government engineer, has just returned from Manitou, where he has been building a dam, which enables vessels of four feet draught to get within seven miles of Rainy Lake, thus making navigation possible over a distance of sixty miles. Instructions have also been received from the department instructing Mr. Margarch to go on with the building of another dam at Dryden, on Wabigoon River, which will raise Lake Wabigoon to high water level and make another stretch of forty miles of water navigable. So that from the track to Fort Frances can be reached by making two portages only. There are now four steamers on the Wabigoon, and one on the Manitou.

Some details of recent riches discovered in the mining regions around Wabigoon Lake are given by the Wabigoon *Star*. For example (there is an account a column and a half long, from which we condense the following): "Mr. Thomas brought in fine samples of free gold from H.P. 368, one of the locations of the Evans-Thomas-Pratt property. Jack Mosher arrived with some beautiful specimens from a new find on the Big Manitou. An assay made by Dr. White, in Wabigoon, of rock from Mr. Livingstone's property north of Dinorwic, assayed $300 per ton." "E. O'Brien, familiarly known as 'Boston,' came into town last week with specimens of free gold and rock found on Whitewater Lake, assaying $20.49 —almost an ounce—to the ton."

A special despatch of July 9th from Rat Portage, in Western Ontario, to the Winnipeg *Free Press*, gives interesting particulars of mining activity in the Lake of the Woods region. Of the Coronado mine for instance, the correspondent relates that some three months ago Sir Roderick Cameron, of New York, bought from the Coronado Mining Company an interest in La Mascotte mine, as well as an interest in seven other locations in the same locality. A practical engineer was sent out to examine the properties, and his report was so favorable that Mr. W. A. Street, a partner in the Cameron firm, took an interest in the properties equal to that already purchased by Sir Roderick. He adds, what is quite true, that the firm named is not one likely to put money into unlikely projects. And "the Coronado has already paid the third dividend to its stockholders. . . The Coronado people were among the first in the district to commence prospecting in a systematic and business like way."

A NEW LIFE ASSURANCE COMPANY.

A new Canadian life company, the Imperial Life Assurance Co., which has a Dominion charter, is likely soon to be in the field for business. It certainly will have the advantage of respectable and distinguished men on its board, for those whose names have thus far appeared are mostly prominent in public or commercial life. The president is Sir Oliver Mowat and the vice-president Mr. J. W. Flavelle, of the Wm. Davies Company. The company, we are glad to understand, intends to do business on lives which experience has proved safe; and from the arrangements made at the start by its projectors for the preliminary expenses and for placing a handsome deposit with the Government at once, one may argue that the company will be conducted in a thoroughly business-like way. Mr. F. G. Cox, who is to be its manager, has had considerable experience in connection with life assurance. The fact that the whole capital of one million dollars has already been subscribed at a premium of 25 per cent. indicates not only the scale upon which the company is proposed to be conducted, but the confidence of its projectors in the field which still exists for Canadian companies in legitimate life assurance.

THE SITUATION.

A qualified restriction on the employment of alien labor in the construction of the Crow's Nest Pass Railway has been put into the contract between the Government and the company. The object appears to be to obtain for the construction of the road a class of laborers who will be likely to take up land as settlers, when they have done working as amateur navvies. In aiming to accomplish a two-fold object, it is quite likely that a double disadvantage will be reaped. Aliens may, notwithstanding the restriction, be employed on the railway, if the Minister of the Interior decides that it is necessary. On the chance that they may remain in the country, when the railway is built, the department is prepared to bring in farm laborers, but will not bring in navvies. In this way, men not best suited for the work will be got, while those who are most capable of performing it will be discriminated against. The farm laborers will learn to do the work of navvies, and then they will have become navvies themselves, and capable of earning higher wages than can be got as farm laborers. The hope that they will save money and become farmers themselves may to some extent be realized; but this is more likely to be the exception than the rule. Discriminating against any form of alien labor is following a bad example, and does not, on the face of the transaction, carry its own justification.

When the tariff bill came from the conference of the two houses of Congress, at Washington, the duty of $2 on white pine had been restored. The retaliatory clause, which is made contingent on Canada putting an export duty on saw logs and different forms of unmanufactured timber, has been modified so as to make such duty recoil upon our lumber exports, making a retaliation in kind and of equivalent amount, instead of 25 per cent. The object is to prevent Canada gaining anything by an export duty on the materials in question. An export duty would go into the coffers of the Canadian Government, while the American retaliatory duty would fall on the Canadian lumbermen who export to the Republic. The same persons that would benefit by the duty would not suffer by the retaliation; the benefit would be direct, the suffering vicarious. The theory of the retaliation evidently is that the Canadian Government will not be willing to receive a benefit in the form of duty in the certainty of the tax being retaliated upon some of its own traders. Some of our lumberers call for an export duty. Can they be those who would have to pay it? For the most part they are, and they allege that the $2 duty will destroy the trade any way, and that an export duty might work a cure.

The Cobden Club is no wiser than the rest of the world, when an answer is required to the question whether Canada's policy of preferential trade comes into collision with the Belgian and German treaties. But its opinion is that if it does, these treaties ought to be denounced. This does not, of course, settle the question for the statesmen, but it gives the consent of the free traders of England to denunciation, and affords some assurance that if the Government consented to put an end to the treaties, opposition from that quarter need not be feared. It remains to be seen whether preference, as now put into force, will tell materially in favor of the British trade with Canada. Perhaps its greatest value is the evidence of the good feeling which it shows.

One feature of the Dingley tariff makes its treatment of Canada seem peculiarly hard. The American who cuts lumber in the valley of the St. John, Canada, and sends the product to the United States, gets a preference there over Canadians. Thus an American lumberer in New Brunswick has a distinct advantage over a Canadian. This preference it is, of course, in the power of Congress to grant; but this consideration does not reconcile the New Brunswicker to the abnormal condition. True, the American bought the right to cut timber in New Brunswick, and the local government was willing to take him as a customer, at the Crown Lands Office; but it was not foreseen that his purchase would bring him a preference over a New Brunswicker elsewhere. If that had been foreseen, would the fact have put it out of his power to parade such preference?

American diplomacy has once more shown itself brusque even beyond the verge of offensiveness. Secretary Sherman's instructions to the American minister in London, on the Behring Sea question, if it has been correctly summarized, charges the British Government, in effect, with acting in bad faith. If what the American press has said of the Secretary of State accurately describes his mental condition, there may be an explanation of the episode which, if not internationally valid, is a reason why the President should see to it that all danger of the offence being repeated should be removed. The President did everything he could to prevent the publication, during the present session of Congress, of the obnoxious despatch; and the leakage which the unauthorized publication reveals is unaccountable. Mr. Whitelaw Reid has taken the trouble to say that it is not due to any action of his. If the press would reflect that it has responsibilities as well as statesmen, we should have been spared some indiscreet comments on the incident which have fallen from the London evening journals. The United States desires to make the sealing regulations more stringent; and as a basis of what should be done, both governments have collected evidence. One trouble is that there is a want of accord as to the facts. Mr. Baden Powell, a British expert in seal life, who attended the Paris tribunal in that capacity, is reported as saying now that the existing seal arrangements are inadequate and ought to be revised.

The Mexican, Central and South American representatives to the Commercial Congress have held a consultation since their return to Philadelphia, on the subject of reciprocity. The proposal of the United States Congress to give reciprocating nations an advantage of 20 per cent. having been explained, Mr. Hitchins, of Rio de Janeiro, took occasion to point out that there is no Monroe doctrine in trade. He found American manufactures, for the most part, too dear, this dearness being largely due to protective duties. Free trade, he told his hearers, could alone secure to Americans a permanent international commerce in manufactures. The delegates during their tour saw what the Americans can do; they know what the great manufacturing countries of Europe can do; and it will be difficult to persuade them that an abatement of 20 per cent. duties for reciprocity would bring to the countries they represent any real advantage.

THE YUKON GOLD EXCITEMENT.

Flamboyant seeming stories are told of the rich gold finds in the Canadian Yukon country, by which several adventurers have suddenly become wealthy. The details show that there is a solid substratum of fact in the recitals. The first fact that strikes the imagination, in this connection, if fact it be, is that the steamer "Portland" arrived at Seattle, U.S., with a ton of gold on board, which came from the valley of the Klondike River. The details which tell us how all this gold was washed out of the placers branch off into individual adventures. One man's share was $100,000; Canadian policemen took to the mines, some of them returning with fortunes, and others remaining to make theirs in the placers. Fortunately, the Klondike placers where the gold is being got, though near the Alaska frontier line, are distinctly within Canadian territory. This region may well be called the Canadian Siberia, so long and cold are the winters. Any one who goes there must be prepared to encounter great hardships, and he will need to have a strong constitution to survive the severe conditions of life to which he will have to submit. Only those who are carried away by uncontrollable enthusiasm will think of going thither this season. Work can be done there, it seems, by those fitted for it, in a temperature of 60 degrees below zero, but how many are fitted for such work?

A large area in the Klondike region has already been staked out, under the mining law, which secures rights to the operators under a mining license. Many of the miners are foreigners, and they have the same rights as Canadians. As usual in similar circumstances, the question is raised of a royalty on the product. Governments are apt to listen complacently to suggestions which promise to put money into the treasury by a seemingly easy process, but the policy of yielding to the fascination requires to be well considered. Placer mines are not permanent, but it will be different if the rock which formed the matrix of the nuggets be found. One thing seems tolerably certain: In the far north of Canada gold placer mines, which seem to be among the richest ever discovered, are now yielding abundantly of the precious metal.

This discovery of gold mines of unusual richness in the Klondike region may make necessary some new regulations for their control. A majority of the first adventurers to arrive there are foreigners, working under license. There is no danger that a foreign element will get effective control there; no present-day Sam Houston will arise to play the Texas game in the Canadian Siberia. When the Eastern Townships of the Province of Quebec were opened for settlement, Lord John Russell, who sustained an official relation to the colony, thought it necessary to take extraordinary precautions to prevent their insidious occupation by a foreign population. The commercial control of the Upper Yukon region, where stretch the Klondike placers and the mother matrix out of which the free particles of gold have been ground, must be in British hands, and it behooves the government of Canada more early to secure this result. Licenses to foreigners should in future be granted only, if at all, for a limited period, strictly terminable when the stated time expires. The fact is, we do not yet quite know how rich is the new region where gold abounds, and we need time to look about and see what the permanent policy for that country should be. Meanwhile we must make temporary arrangements which, while they will not check enterprise there, will leave us free to act as our interests may dictate when we have had time to survey the whole field and consider what is best to be done. The alluvial deposits carrying gold are rich, and while they last surprises may at any time be expected; but it is their nature to become exhausted, and when this happens the mother rock must be induced to give up her treasures, not to the iceberg, but to the industry of man. What we want now is not a rush of foreigners to the region, but opportunity to survey our new treasure land, and prepare for the work of mainly developing it ourselves if it should be found desirable to do so.

CANADA'S FOREIGN TRADE.

The foreign trade of Canada during the fiscal year ending June 30th, 1897, is exceeded by the figures of the record year 1893. The aggregate value of goods exported and imported in the year just closed amounted to $244,852,000, as compared with $228,728,000 the previous year, and $247,638,620 in 1893. The total trade of these three years is divided as follows:

	Exports.	Imports.
1897	$133,621,000	$111,231,000
1896	118,140,000	110,588,000
1893	118,564,000	129,074,268

The disparity between the export and the import returns, showing that Canada has sent abroad more goods by twenty-two million dollars than have been purchased in foreign markets, will afford satisfaction to those who adhere to the "balance of trade" theory in holding that the real advantage obtained from foreign trade consists in the payments that necessarily accrue to a country which imports less than she exports. Two causes have contributed largely to the foreign trade of the Dominion within the past year. The Governments of Canada and the United States have been engaged in the work of remodelling tariffs. The prospects of the accession of the Liberal party to power and the possibility of lower duties had led merchants to curtail their purchases of articles which were subject to high protection. Supplies had become limited, and when the duties were finally settled the stocks were replenished to the enlargement of the Government trade returns. The current idea that the Liberal Cabinet was wedded to a tariff for revenue policy had also led to the importation of such commodities as were likely to afford, by increased taxation, an important source of revenue to the Government.

The important factor contributing to the substantial gain of $15,481,000, or more than 13 per cent., in the country's exports within a year, has been the protracted tariff tinkering of the United States Congress. Great uncertainty has existed as to the duties which will be enacted when the Dingley bill finally becomes law; but Canadian merchants have proceeded upon the idea that their commercial interests would not be improved by legislation made at the instance of Republican Congressmen. Such commodities as Canadians have been accustomed to market in the United States, lumber, barley, wool, hides, and other products, have been hurried across the border line to escape the excessive taxation which was considered inevitable.

A trade built up through the temporary influence of impending tariff legislation is not likely to prove satisfactory, and the Government returns would give little cause for congratulation if other factors had not been at work. The shipments of grain, produce, lumber and live stock from Canadian ports since the opening of navigation have all been largely in excess of the movement in 1896. From the port of Montreal considerable gain has been made in the exports of wheat, peas, oats and barley of our own growth, and Indian corn of United States growth. The shipments of eggs and butter have made moderate increases, while cheese has made phenomenal gains. The active home demand for pork products and a short pack, account for a diminished trade in these commodities; but this loss has been, in part, compensated by the increased shipments of cattle.

A comparison of prices in the different years shows that while the staple products of Canada, in common with the products of other countries, have declined in value during the past several years, there are many evidences of improvement in this respect. At the close of the past fiscal year the prices of flour, wheat, cheese, pork products, canned lobsters, wool and hides were in advance of prices at a similar period of the previous year, while the prices of oats, barley, peas and sugar had declined. With continued development in the exportation of natural products, the importations rendered necessary by the railways projected and in process of construction, and the further exploitation of our mineral resources, the loss of foreign trade the present year which is threatened by the impending action of the United States Congress, may be in part, if not wholly, overcome.

WEST INDIA TRADE.

A correspondent in Quebec, referring to some previous articles in THE MONETARY TIMES on the subject of Canada's trade with the West Indies, and the suggestions we made with respect to it, asks the question: "How is it that our West India trade, which this country is so well fitted to do, does not increase? It took a spurt a year or two ago, and promised great things, but it seems to be falling back again, and the West India folks write as if disappointed. Whose fault is it? You gave some very good advice to our exporters and shippers, I remember. It is maybe time you were working them up again."

To this it may be replied that, while possibly both our export merchants and our shippers have been negligent as to matters of detail that go far to make or mar a foreign market, the most enterprising exporter may be handicapped by a tariff. It is not unlikely that the complaint our correspondent mentions is caused by recent changes in duties on West India products; they certainly made some outcry among lower province merchants. We find in the last issue of the *Maritime Merchant*, published in Halifax, an interview with a gentleman who is about to publish a directory and commercial record of the islands. This gentleman, Mr. McAlpine, visited Jamaica, British Guiana, Barbadoes, Trinidad, Grenada, St. Vincent, St. Lucia, Dominica, Antigua, Martinique, Nevis, St. Kitts, St. Thomas, Santa Cruz, Montserrat; and says that if he were looking for a market for the general products of our Canadian farms he would select the West Indies as the most promising field for development at the present moment. But he also says, and this our merchants should ponder, for they have been often told it, "that if our people would put up their goods suitable for those markets they would easily get the whole trade. The British West Indies would give every preference to Canadian articles, but they object to the style in which our goods are packed."

Another Canadian, Mr. Stevens, who is a flour miller in Chatham, Ontario, insists that our flour is admirably suited for that market, and that much more of it should go down there. But it requires pains and persistence.

Speaking directly of his experience with West India trade he said: "The shipments I have made so far have been satisfactory as regards prices, but the delays in getting settlements, and the fact that there seems to be a lack of knowledge regarding grades, has impressed me with the idea that Canada must institute a thorough educational system among the consuming population and a more intimate trade relation between us and the dealers out there. To carry out this idea to its most serviceable extent, it is necessary that a competent flour man be sent there, to make a study of their requirements, and to secure a regular connection between their business houses and us.'

BANKING RETURN.

We give below a condensation of the figures of the statement of Canadian banks for the month of June. It is compared with the bank statement for the previous month, and shows capital, reserve, assets and liabilities, average holdings of specie and Dominion notes, &c.

CANADIAN BANK STATEMENT.

LIABILITIES.

	June, 1897.	May, 1897.
Capital authorized	$ 72,958,684	$72,958,684
Capital paid up	61,949,536	61,493,156
Reserve Funds	27,070,799	27,020,799
Notes in circulation	$32,366,174	$31,820,445
Dominion and Provincial Government deposits	7,514,236	6,974,898
Public deposits on demand	71,466,457	70,183,545
Public deposits after notice	129,675,231	129,532,122
Bank loans or deposits from other banks secured	12,642	17,642
Bank loans or deposits from other banks unsecured	2,940,414	2,838,777
Due other banks in Canada in daily balances	106,583	133,477
Due other banks in foreign countries	408,529	320,798
Due other banks in Great Britain	2,693,051	3,373,262
Other liabilities	582,754	958,688
Total liabilities	$247,766,150	$246,133,727
ASSETS.		
Specie	$8,663,459	$8,657,293
Dominion notes	15,921,453	15,936,862
Deposits to secure note circulation	1,859,936	1,848,493
Notes and cheques of other banks	8,490,673	8,519,447
Loans to other banks secured	31,645	31,094
Deposits made with other banks	3,706,062	3,679,882
Due from other banks in foreign countries	21,387,820	18,763,773
Due from other banks in Great Britain	8,131,042	8,981,513
Dominion Govt. debentures or stock	2,796,936	2,800,224
Other securities	25,588,948	24,851,672
Call loans on bonds and stock	14,898,629	14,256,608
	$111,476,603	$108,326,861
Loans to Dominion and Provincial Governments	1,427,009	821,469
Current loans and discounts	208,527,690	211,750,319
Due from other banks in Canada in daily exchanges	188,784	161,916
Overdue debts	3,534,163	3,419,427
Real estate	1,991,169	1,989,223
Mortgages on real estate sold	511,294	509,298
Bank premises	5,587,046	5,627,440
Other assets	1,959,974	2,086,915
Total assets	$335,203,890	$334,693,054
Average amount of specie held during the month	8,702,067	8,551,022
Average Dominion notes held during the month	15,678,018	15,717,060
Greatest amount notes in circulation during month	33,070,121	32,637,033
Loans to directors or their firms	7,737,674	8,135,095

One noticeable feature of the present and former returns is the growth of bank circulation within the past few months, compared with a year previously. And it is not easy to account for this, in the face of the mercantile failures that have taken place and the liquidation that has been going on in the country. True, business is good in the Maritime provinces, and it has been active in Manitoba, while mining excitement has done much for British Columbia; but in Quebec and Ontario trade has been hampered by apprehensions as to the tariff at home as well as in the United States.

The wonderful growth within a year of public deposits in the Canadian banks—from $183,779,000 in June, 1896, to $201,024,000 in June, 1897—makes it plain that commercial and manufacturing enterprise have been slow, and capital extremely cautious, else these seventeen millions, half of which are on demand, would not have been put into bank. Comparing last month with June, 1896, there is some $3,000,000 more money at use in the States, which means that it was not needed at home. Current loans have scarcely increased in the twelvemonth, although the totals of assets of the banks have increased from 316 millions last year to 336 millions now.

The increased total holdings of securities by the banks is a matter of sufficient interest to deserve a paragraph. It will be observed in our second table that what are termed the "investments" of the banks have risen from $23,347,000 a year ago, to $28,385,000 now. This total consists of the items in the return headed Dominion Government debentures; railway securities; municipal and other securities. Five years ago these were not ten millions in amount; ten or a dozen years ago, more like five millions. This condition of affairs, while on the one hand it may appear a disadvantage, in that it locks up in securities earning 3 or 4 per cent. a sum of $28,000,000 that might be earning 6 or 7 by being loaned under discount, is on the other hand a valuable feature. For it shows that our banks can afford now to hold securities of our own country instead of, as formerly, European securities. And it adds to the strength of these institutions in time of pressure to have a round sum in assets of this kind.

ABSTRACT OF BANK RETURNS.

30th June, 1896. [In thousands.]

Description.	Banks in Quebec.	Banks in Ontario.	Banks in the other Prov's.	Total.
Capital paid up	34,819	17,790	9,589	62,198
Circulation	14,648	10,060	5,628	30,336
Deposits	91,908	71,420	28,784	192,112
Loans, Discounts and Investments	115,843	81,901	37,792	235,536
Cash, Foreign Balances (Net), and Call Loans	33,571	22,653	8,364	64,588
Legals	6,726	4,578	2,704	14,008
Specie	3,557	2,708	1,592	7,857
Call Loans	4,369	7,528	1,127	13,024
Investments	6,930	11,561	4,856	23,347

30th June, 1897. [In thousands.]

Description.	Banks in Quebec.	Banks in Ontario.	Banks in other Prov's.	Total.
Capital paid up	35,012	17,292	9,645	61,949
Circulation	15,611	10,774	5,981	32,366
Deposits	102,266	78,264	31,076	211,606
Loans, Discounts and Investments	119,493	84,023	38,387	241,903
Cash, Foreign Balances (Net), and Call Loans	41,022	28,189	10,825	80,036

Investments	8,026	15,234	5,124	28,384

Government Savings Banks	$47,085,000	
Montreal City and District Savings Bank	10,111,000	
La Caisse d'Economie, Quebec	5,418,000	
Loan Companies, 1896	19,000,000	
		$ 81,614,000
Bank Deposits		211,606,000
Total Deposits of all kinds		$293,220,000

GOVERNMENT CIRCULATION.

Small	$ 7,516,196
Large	14,801,900
	$22,318,096

Gold held, $10,720,650, or 48.03 per cent.

MINING IN BRITISH COLUMBIA.

We gather from our Western exchanges that good work is being done in the development of mining prospects and that new claims are being staked both in the West and East Kootenay districts of British Columbia. The mines of West Kootenay in the vicinity of Rossland, where capital has been judiciously expended, are doing well. In Fairview Camp, further west, a good many more men are working than last year, and stamp mills are being placed there. A great many prospectors made their appearance in East Kootenay this spring, and the country from Golden, on the C.P.R. main line, down to Fort Steele, will be thoroughly explored this season. Now that the Crow's Nest Pass Railway is to be built, the value of mines in both East and West Kootenay will greatly improve, because the opening up of coal mines and coke ovens will reduce materially the cost of fuel for the smelters.

It strikes us that now would be a good time for Canadian capital to invest in smelter plants. The place for one smelter is clearly where the railway crosses Kootenay River below Fort Steele. If one were placed there it could take care of all silver and lead and other ores from East Kootenay, which includes the product of such mines as the "North Star," "St. Eugene," "Dibble Group" and "Sullivan Group." It seems natural that there should be another at Robson to smelt the ores from Rossland and the Slocan district. A large amount of the Rossland ores must have cheap transportation and cheap fuel in order to profitable working; and when the Crow's Nest Pass Railway is completed, coke can be delivered from Robson for half the price it now costs at Nelson and Trail, and the transportation of ore from Rossland will be probably fixed at a rate that will allow mines to ship ore of a quality that they cannot do at present.

THE LUMBER SITUATION.

The lumbermen of Canada have seldom carried less stock than at the present time. Within the past two months supplies have been heavily drawn upon by shipments to the United States, Europe and the home market. There has been an active demand from the United States for lumber, as a result of the certainty that Congress will place a heavy tax upon lumber in the new tariff. The recent action of the Congressional Conference in placing the duty again at $2.00 per thousand is regarded as showing the wisdom of these shipments. Large stocks of Canadian lumber are held at Oswego, on Lake Ontario, and Tonawanda, on Lake Erie. There has been considerable demand from the United States for lumber for immediate consumption, and this trade has shown distinct improvement as compared with the summer trade a year ago.

Local sales have been much larger than in the same period last year. A prominent firm reports an increase of 50 per cent. in the sales of May and June, 1897, as compared with the same months in 1896. A comparison of values, however, does not give as satisfactory results, an average decline in prices of $1.25 per thousand having taken place during the year.

The Georgian Bay lumbermen contemplate renewed and vigorous efforts to secure an export duty on logs so soon as Congress takes final action making prohibitory the exportation of lumber from Canada to the United States. A number of the mills in this district will be compelled, it is thought, to close down when the American market is closed. Competition with the lumbermen of the Ottawa Valley in the markets of the United Kingdom and Europe is very difficult, in face of a handicap in freight rates amounting to $2 per thousand feet. The Georgian Bay lumbermen have some advantage in the costs of logging, but this is not sufficient to offset the difference in freights. The consumption of the local market is equal to only a small percentage of the capacity of the mills in the Georgian Bay district, and unless the United States legislators can be brought to reconsider the action which they have apparently decided to take the output of the mills must be seriously curtailed.

Lumber trade in the Maritime Provinces is far more satisfactory. We elsewhere show how unusually brisk the export lumber trade of St. John is, shipments going thence to France, South America and the United States, as well as to Britain. There are also more lumber steamers than usual in the Miramichi river.

COMPROMISING DEATH CLAIMS.

Since last issue we are favored with a letter from the Canadian manager of the Mutual Reserve Fund Life Association, referring to the case of Dr. Gowland of Hamilton; also copy of brief describing the case and blank copy of conditional receipt. The letter will be found on another page. Mr. McMurtry told us last month, when we enquired of him about this case, that "Dr. Gowland was reinstated by conditional receipt upon giving a statement that he was in good health and had been in good health for a year." Upon enquiry in Hamilton, however, we are told by friends of the beneficiary that no such statement of health was made. Upon the back of the company's conditional receipts, it must not be forgotten, are conditions upon which payment is accepted by the company, and which are made a part of the receipt; one of these runs as follows:

> First.—That said member is now living, and of temperate habits, and is now and has been during the past twelve months in continuous good health, and free from all disease, infirmity or weakness; otherwise said payment and this receipt and said policy shall be and are null and void, and the sum paid hereon shall be subject to the order of the within named person.

The receipt of 30th July, 1896, according to this, could be of no binding force, since it was based upon untruth, as proved by subsequent evidence of medical men and admissions of the beneficiary. If this were the case, the company had here a good ground for refusing to pay the claim. But it appears, as we were told in Hamilton, to have refused payment, first, on the ground that the premium was 29 days overdue, and afterwards upon the ground of the assured's ill health. But nevertheless it offered $1,500, and afterwards paid the full amount of the claim, $3,000, instead of standing on its rights. Query: Did not the company, having waived evidence of health on July 30th, make a grave blunder in disputing the policy on the grounds mentioned, and afterwards offering a compromise, and then paying in full?

Mr. McMurtry tells us that he has had much to do with the settlement of death claims for the Mutual Reserve during these eight years past, and has never known that company to take an unfair advantage of beneficiaries. We believe Mr. McMurtry to be a truthful gentleman, and we have never heard of his beating down policy-holders unduly in case of death claims. But this does not alter the fact that his company has acquired a reputation for doing this very thing. That this reputation is not undeserved appears from the statement of the Connecticut superintendent, who shows that in one year, 1895, the company, besides its death claims proper, expended $87,976 for "settling and adjusting death claims," while in ten years it spent $606,150 in the same way.

ACTIVITY IN NEW BRUNSWICK LUMBERING.

In the harbor of St. John this month there is remarkable activity. Business in lumber is unusually brisk, and the advent of a great number of ocean-going vessels makes the port very busy. One day last week there were in harbor fifteen ocean steamships, totalling 25,655 tons and sixteen sailing ships, totalling 13,582 tons—in all 39,247 tons, loading lumber and deals for the English and Continental market, besides those loading for the United States. It is estimated that the quantity of spruce which these vessels will take away will be not less than 25,000 standards, or in round figures 50,000,000 superficial feet. This, in addition to 6,000,000 already shipped this month, will make the shipments for July the largest for any one month on record.

Many are watching the action of the United States Senators and their tariff tinkering, says the St. John *Globe*. "The law which has been in effect across the line for the past few years, allowed all lumber cut on American soil, and sawn by American mill-owners here, to pass into the United States free of duty, while no matter whether the lumber cut by Canadian mill-owners was taken from American soil or not, the Canadians would have to pay the duty."

In the vicinity of St. John are fifteen saw mills; four of these have Canadian owners, while the other eleven are owned by Americans. The Canadian mills above the falls are Messrs. Randolph & Baker's, at Randolph; George Barnhill's mill at Pleasant Point; W. H. Murray's mill at Marble Cove; and below the falls is Messrs. Hilyard Bros'. mill on the Strait shore.

The American mill-owners above the falls are S. T. King & Sons, at Kingsville; Andrew Cushing & Co.'s, at Union Point; C. F. Woodman's two mills at Milford; Mr. Charles Miller's mill at Pokiok; Stetson & Cutler's mill at Indiantown, and another at Pleasant Point, Dunn Bros'. mill at Grand Bay, E. D. Jewett's mill at Millidgeville, and below the falls are Purves & Murchie's mill, West End; James F. Hamilton's and James R. Warner's mills at Strait shore.

Nearly all of the American mills, the *Globe* adds, are at present cutting deal for the English market, and are all being kept very busy. The new clause of the Dingley bill says that to have lumber admitted to the United States free it must be the product of American labor, that is, sawn by American workmen. Out of about 700 workmen engaged in the eleven American mills there are only about twenty-five American workmen, while the rest are staunch Canadians.

CANADIAN FLOUR ABROAD.

The progress made by Canadian flour in foreign markets has not been satisfactory to those interested in the development of the industrial resources of this country. The wheat of Canada is of excellent quality, while Manitoba Hard No. 1 wheat has no superior in the wheat growing countries of the world. The high prices paid for Manitoba wheat in the markets of the United Kingdom bear evidence that the merits of this cereal are recognized abroad. But while large shipments of wheat are exported each year from Canada, the foreign trade in flour remains very small. The following table will show the value of the exports of Canadian wheat and flour during the past five years:

	Wheat.	Wheat Flour.
1892	$12,056,832	$1,860,491
1893	10,152,016	1,798,878
1894	9,556,788	1,842,875
1895	7,326,736	1,119,163
1896	8,007,959	895,148

As will be seen from the above table the exports of both wheat and flour have diminished within recent years. The decline in the flour trade has been relatively greater than in wheat. The shipments of wheat were 33 per cent. less in 1896 than in 1892, while a comparison of these years shows a decrease of 51 per cent. in the exports of wheat flour. Newfoundland has been Canada's best customer in the flour trade since 1894, taking 56.9 per cent. of the total shipments in 1896. In the same year Great Britain took 38.8 per cent. of the flour shipped from Canada, leaving only about 3 per cent. for other countries.

The millers of Manitoba wheat are looking abroad for new markets. As the Australian correspondent of THE MONETARY TIMES has shown, Manitoba flour is being shipped to Sydney, N.S.W. This trade is as yet confined within narrow limits amounting in value to $12,974 in 1896, but shows encouraging signs of development. The trade with the British West Indies and British Guiana, which was once a source of profit to Canadian millers, has declined to a value in 1896 which represents merely nominal existence. The Lake of the Woods Milling Company has recently made a shipment from their mills at Keewatin to Georgetown, Demerara, and there are prospects that the Western millers may recover for Canada what their Eastern *confreres* have lost.

ON THE CHEESE BOARDS.

The movement of cheese during the week ending July 21st is about equal in volume to that of the previous week. At eighteen meetings of Ontario cheese boards 33,367 boxes of cheese were offered. Prices have remained steady, ranging from $7\frac{7}{8}$ to 8 1-16 cents per pound. There is some difference between salesmen and buyers in regard to prices and in several instances the boards adjourned with few or no sales recorded. The shipments of cheese from Montreal for the week ending July 17th were 104,116 boxes, as compared with 87,341 boxes for the corresponding week last year. Shipments to date this season are 643,618 boxes, as against 492,002 boxes in the same period a year ago. For the six months ending June 30th, Canadian cheese exports to the United Kingdom show a gain of 40 466 cwts. as compared with the same period in 1896, while the export of United States cheese declined 41,828 cwts. in a comparison of these periods. We append our usual table of transactions on the Ontario cheese boards :

Boards.	Date of meeting. July.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date next meeting
Brockville..........	15	..	3,815	....	....	......
Kingston	15	..	1,485	1,075	$8\frac{3}{16}$-$8\frac{1}{8}$	......
Barrie	15	..	1,839	1,184	$7\frac{3}{4}$ $7\frac{13}{16}$	......
Chesterville........	15	...	704	215	$8\frac{1}{8}$	......
Perth	16	..	1,200	....	$8\frac{1}{16}$-$8\frac{1}{8}$	......
Brantford..........	16	..	2,986	1,961	$7\frac{1}{2}$-$7\frac{13}{16}$	......
South Finch	16	..	615	431	$8\frac{1}{8}$	......
Iroquois	16	..	700	500	$8\frac{1}{8}$	.... .
London...	17	29	5,420	1,200	$7\frac{7}{8}$-$8\frac{1}{8}$	July 24
Belleville	20	29	2,150	1,110	$7\frac{15}{16}$-$8\frac{1}{8}$	......
Ingersoll	20	..	3,057	....	....	......

THE LATE MR. HENRY LYMAN.

An honorable and useful life closed when on Monday last Mr. Henry Lyman passed away. That gentleman had been a prominent citizen of Montreal for half a century. Born at Derby, Vermont, in 1813, he came to Canada with his family at the age of three years, and received his education in Montreal and in the academy of Amherst, Mass. At the age of sixteen he joined the establishment of Hedge & Lyman, druggists, St. Paul street, the firm consisting of W. Hedge and W. Lyman, and when it dissolved in 1836, the partnership of William Lyman & Co. of Montreal was formed, and Mr. Lyman was partner in that and the successive firms of Lyman, Savage & Co., Lyman, Clare & Co., Lyman, Sons & Co. In conjunction with the late Mr. Benjamin Lyman, he established the firm of Lyman Bros. & Co., of Toronto, more than fifty years ago. Although he recently had retired from active business Mr. Lyman was at his death a member of both firms.

In various directions the deceased showed his public spirit ; from a Sunday school to a fire company, he was ready to lend a helping hand to anything that would benefit the community. And he rendered valuable services in the developing period of that city between 1850 and 1870. He was at different times a member of the city council, a harbor commissioner, president of the board of trade, a governor of hospitals and charities, etc. In 1867 he was elected a member of the board of the Citizens' Insurance Company, and succeeded the late Sir Hugh Allan in the presidency at Sir Hugh's decease in 1881. He was a director of the Canada Shipping Co. Mr. Lyman was a handsome, courtly and dignified man, deservedly esteemed for qualities which made him the friend of the helpless and oppressed.

FOR GROCERS AND PROVISION DEALERS.

Guelph is discussing the probability of the establishment of a pork-packing factory in that city.

A creamery at Summerside, P.E.I., which has only been operated for two months, is giving successful returns.

During the month of June the Exeter creamery made upwards of 37,000 pounds of butter, or an average of nearly 1,500 pounds per day.

The lobster fishing season, which was extended on account of the poor catch, expires on July 24th. This extension applies to all Maritime Province coasts except the Bay of Fundy and the western and southern coast of Nova Scotia, where the close season began July 1st.

Cheese is going across the Atlantic in a very lively way. Last week the shipments of Canadian cheese were 104,408 boxes, which is far ahead of the like period last year. London and Bristol took 35,000 boxes and 33,000 boxes respectively ; Liverpool 16,400, and Glasgow 9,800 boxes ; Hull, Aberdeen, Manchester, Belfast and Hamburg (Germany), the remainder.

The Government is urged by Maritime Province fishing interests to impose a duty on fresh fish warehoused in Canada for export equal to the amount of bounty allowed by the French Government. This bounty covers the outfits of vessels amounting on an average to $200 ; $2 per quintal on the dry fish exported to America, the West Indies, and west coast of Africa, and $1.60 per quintal to European countries or foreign States on the shores of the Mediterranean, and $2 per quintal on all cod roes exported to France to be used as bait in sardine fishing.

A circular has been issued from the office of the general freight agent of the C. P. R., Mr. G. B. Bosworth, notifying agents and shippers that when space in the special iced butter cars for Montreal will permit, and shippers so instruct in writing, cheese may also be loaded in these cars and transported to Montreal at tariff rates, and without addition charges for icing. The railroad company, however, reserves the right to remove such cheese from the iced butter cars to ordinary freight cars at any points between shipping point and Montreal, when necessary to make room for shipments of butter, which shall in all cases have preference. Cheese transported at request of shippers in iced refrigerator cars, other than the established iced butter cars, will be subject to charges of 10 per cent. over tariff rates, with a maximum charge for each icing of carloads of $3 per icing.

ABOUT DRY GOODS.

The world's visible supply of raw silk on May 31st last was 1,170,073 kilos, against 1,975,048 kilos on May 31, 1896. The average supply on the same date for the past six years has been 1,562,787 kilos.

The man who does not plan ahead for his business, says the *D. G. Economist*, is not likely to make a successful merchant ; he belongs to a class that are spoken of as being poor managers. His business pushes him instead of him pushing his business.

The suggestion has been made of a tax on the turnover of departmental stores, and some people think such stores can be prevented by such legislation. It will need more than this to put the department store out of existence. We cannot exactly expect to pass laws to prevent people patronizing such stores, and it seems that nothing less will do away with them.

From the last circular of Bavier & Co., dated Yokohama, June 19, 1897: The increased demand from Europe as well as the reports of short crops in China, France and Italy, have enabled holders to advance prices from $20 to $30 per picul all round. Crop reports are, as usual, very conflicting. No reliable estimates can be made before next month. Meanwhile we are inclined to believe that there will be at least as much produce as last season, and very probably 10 per cent. more.

A significant vote given for the new United States tariff was that cast by certain southern Democrats for a duty upon foreign cotton. This represented a purpose to try to shelter the Sea Island planters from sharp competition from Egyptian cotton, the imports of which have increased in a remarkable manner during the last four years. In 1875, imports of cotton into the United States from all countries amounted to about two million pounds. In 1896, they exceeded fifty-five million pounds. These cottons have had value for American manufacturers, not solely because they were cheap, but chiefly because they possess qualities not found in cottons grown in the United States.

—The port of Montreal is busy, and shippers are still calling for more wharf room, which the government seems in no hurry to grant. The tonnage of ships entering Montreal harbor from the opening of navigation up to July 1st is 404,000, or some 60,000 more than during corresponding period in several recent years.

INSURANCE PARAGRAPHS.

The city of Worcester, Mass., has taken out insurance amounting to $188,100 on fifty-five school houses in the city.

"Order of Home Defenders" is the title of a new insurance order started in Minneapolis. As usual, every officer is "supreme" in the concern, from the president to the window washer.

The Merchants' Fire Insurance Co. is the name of a company to be organized under the Ontario Insurance Act, 1897, capital $500,000. The president is the Hon. G. E. Foster, M.P., ex-minister of finance The general manager is L. C. Camp, formerly agent in Canada of the Phoenix Insurance Co., of Brooklyn. The head office is to be at Toronto.

Yesterday's fire at the New Edinburgh flour mills showed the need of fast-steaming fire engines. The Conqueror was half an hour getting to work. The fire showed also that some of the hydrants and probably some of the water mains and connections in Lower Town are, as was feared, hardly safe when a heavy water pressure is on. Some sort of testing seems necessary to give confidence in the conditions in the lower parts of the city.—*Ottawa Journal*, 20th.

An illustration of how long fire will burn and smolder without giving signs of its presence, is given by the Providence *Journal*. It was at the ruins of the Masonic temple, which are being cleared up by laborers in that city. It is over a year ago that the Masonic temple was burned to the ground. The workmen, while tearing down a portion of the wall which was left standing on the side where a tin shop was located, found quite a fire in progress. They first saw the smoke, and when they had pulled down the wall the smoldering embers were fanned to life by the wind.

On Friday morning last the sawmill of the Royal Paper Mills Company, situate at East Angus, near Sherbrooke, Que., took fire from friction of the machinery, and the flames spread to the pulp mill and blacksmith shop. All three were destroyed, together with 100,000 feet of lumber. Happily the paper mill of the company, across the river, was untouched by the fire. Mr. F. P. Buck, of Sherbrooke, is president, and Mr. Rufus H Pope, M.P., general manager of the company. The extent of the damage is estimated at $150,000; insurance partial. The mills have been working day and night lately, fulfilling heavy contracts, and the enforced stoppage will cause great inconvenience to the company.

We learn that the investing powers of the North American Life Company were recently much enlarged. The company can invest its funds in all classes of debentures, bonds, stocks or other securities of the Dominion, or any province or municipality therein, as well as in the shares of well-established incorporated loan companies. It has power also to invest in, or on the stocks or debentures of water-works, gas, electric light or power, electric railway or telegraph companies incorporated in Canada. It has also power to buy its own policies as well as those of other companies, or to make loans upon the same. All this will help to add to the popularity of the company, and should also help its profits.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, July 22nd, 1897, compared with those of the previous week:

CLEARINGS.	July 22.	July 15.
Montreal	$12,084,921	$11,466,344
Toronto	7,462,613	7,352,818
Halifax	1,224,380	1,288,250
Winnipeg	1,339,930	1,253,198
Hamilton	559,036	632,763
St. John	693,929	761,560
	$23,364,809	$22,754,933

Aggregate balances this week, $3,707,826; last week, $3,368,441.

—The present has been a great month for conventions. There was the Christian Endeavor convention at San Francisco, then that of the Baptist young people at Chattanooga Next the American Institute of Instruction met in Montreal, and later the Society of Charities and Correction, and the Epworth League, at Toronto. We have not adequate means of measuring the spiritual benefit of such gatherings, but they are good things for railway travel. Our friends from the United States learn something about us by coming over, too. We may say of them, and of all American visitors, in the words of the "Habitant's Jubilee Ode," by Dr. Drummond, of Montreal, published in the *Herald*:

> Since den, when dey're comin' on Canadaw, we alway be treat dem well,
> For dey spen' de monee tak *gentilhomme* and stay on de best hotel,
> Den "Bienvenu" we will spik dem, an' "Come back again nex' week,"
> So long you was kip on de quiet. an' don't talk de *politique*.

—An interesting statement of the cost of the British war vessels shown in the naval review at Spithead the other day is given by a correspondent of the London *Times*. There were 141 ships in line, and their number and cost was as follows: 21 battleships, $79,000,000; 13 first-class cruisers, $28,000,000; 26 second-class cruisers, $28,000,000; 11 small cruisers, $7,500,000; 20 torpedo gunboats, $6,000,000; 30 torpedo boat destroyers, $6,000,000; 20 torpedo boats, $1,500,000; 141 ships, costing $156,000,000. Chauncey Depew says a German diplomat, who was looking on at the Spithead review, expressed himself thus: "Germany has the most efficient and formidable army, and we are invincible on land. Some of our people are advocating a like expenditure on the sea. But we would bankrupt ourselves in vain. We could never catch up, as England would undoubtedly maintain her present preponderance by building ships as fast as we did."

—A decision of importance to the fishing industry of portions of the Maritime Provinces was announced this week by the acting Minister of Marine and Fisheries. The season for lobster taking on the Northumberland Straits shores and Cape Breton Island closes on the 15th July, but so unfavorable has the weather been for the past six weeks that the fishermen made poor catches, and the output of the canneries has been much below the average to date. Urgent requests were sent to Ottawa for an extension of the season, and, yielding to these, Mr. Fielding has decided to extend the season to the 24th of July. To the western part of Nova Scotia and the Bay of Fundy shores of New Brunswick this extension does not apply, as the season closed there on the 1st of July.

—It is of interest, now that wheat has taken a bound upward, and that in both Manitoba and Ontario the wheat crop prospects are so good, to learn that the Argentine Republic will have a shortage of wheat this year. This appears from the fact, wired from San Francisco, on Tuesday, that two ships have been chartered to carry wheat to Brazil, one of them the "Comliebank," of 2,179 tons register, already loaded and ready for sea. The other, the "Cressington," of 2,000 tons, about to begin loading. This is said to be the first time in history that a cargo of that kind has gone from San Francisco to Rio Janeiro, Brazil having always depended upon the Argentine for its wheat supply heretofore.

—The "Canadian Mining, Iron and Steel Manual for 1897" is just out, and is filled with information upon all matters relating to mining in Canada. Referring to the notable mining development of 1896, the manual says: "An approximate estimate places the total value of the yield at $23,627,305, or an advance over the year 1895 of $1,627,305. The principal products were: Coal and coke, $8,117,865; gold and silver, $4,957,785; copper, nickel and pyrites, $2,227,303; petroleum and natural gas, $1,431,947; structural materials, $4,392,834; iron ore, $184,313.

—So Sir Donald Smith, now that he is made a peer, is not to be Lord Glencoe, but prefers to select the title of Lord Montreal, or Lord St. Lawrence. It will be better so, for nobody who knows him likes to associate Sir Donald with anything gloomy—and Glencoe has undoubtedly melancholy associations. Besides, the one has an old-world association; the others have a new-world. And if we are to have lords, let us have Canadian titles for them. We are proud of Sir Donald, and wish to remember him as one of ourselves.

—The resolution of the Montreal bankers, mentioned last week, namely, that to reduce the general rate of interest on deposits to three per cent., has been generally assented to; all the leading banks will put the new rate into force August 1st In one or two cases the 1st September is the day fixed for the rate to come into effect for new business, and by the 1st December three per cent. will be the rate on deposits in all the banks, except two of the smaller institutions, who have declined to come into the arrangement.

—Business revives but very slowly in the United States. Still the movement has recently increased somewhat as compared with last year. The totals of bank clearings at eighty-seven cities of the Union for the week ending July 15th, show total clearances $1,032,479,114, an increase of 7 8 per cent. as compared with the corresponding period last year. Outside of New York city the clearances were $448,807,489 and the increase was at the rate of 3.7 per cent.

—It is announced that the annual meeting of the Canadian Bankers' Association will be held this year at Niagara Falls, on Wednesday, Thursday and Friday, the 6th, 7th and 8th of October.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending June 30, 1897.

THE MUTUAL RESERVE.

Editor MONETARY TIMES.

SIR—I have before me your editorial headed "Compromising Death Claims," which appears in THE MONETARY TIMES of the 16th inst. Of course I do not expect any favors from THE MONETARY TIMES, but I feel that a paper which pretends to occupy the position that your paper does ought at least not to misrepresent, and before criticising you certainly should have the facts before you. In this editorial you say: "Still, the Mutual Reserve is not always so prompt and generous; does not always pay in full when it might be more creditable to do so." Then you go on to recite the case of Dr. R. H. Gowland. You will no doubt remember that I gave you the facts concerning this Gowland claim, of which you took a memo. However, I will repeat them, and hope you will feel it your duty to give the facts to your readers, so that they may know whether the Mutual Reserve Fund Life Association has acted in a creditable manner or not.

Dr. R. H. Gowland was insured under policy 168920 for $3,000, which policy was issued on the 13th of September, 1895. He allowed the policy to lapse on calls 78 and 80, and also on call 86, which was due on the 1st of July, 1896. On the 30th of July, twenty-nine days after, the policy was re instated by conditional receipt, copy of which I herewith enclose. This receipt is issued on the following condition: "That said member is now living and of temperate habits, and is now, and has been during the past twelve months, in continuous good health and free from all disease, infirmity or weakness, otherwise said payment and this receipt and said policy shall be and are null and void, and the sum paid hereon shall be subject to the order of the within named person." On December 11th Dr. Gowland died, and when the claim papers were sent in, the claimant's affidavit showed that the health of deceased first began to be affected in August, 1885, and that in November, 1895, deceased went to John Hopkins' Hospital in Baltimore, Md., but the doctors could not locate the trouble. Dr. Bloodgood, of Johns Hopkins Hospital, states that the remote cause of death was tubercular disease of the left kidney, of one year's duration. Dr. Malloch, in his affidavit, states that he attended deceased in August, 1895, for the disease which ultimately caused death. Now, in view of these facts, do you not think the Mutual Reserve strained a point in paying Mrs. Gowland the full amount of this claim? My own opinion is that if this case had been carried to the courts the Mutual Reserve could have successfully contested the payment of this claim. Dr. Gowland must have known when he accepted the conditional receipt on July 30th, 1896, that he had not been in good health during the year previous, and he could not have overlooked the fact that in the previous November he had been at Johns Hopkins Hospital for treatment, and he also must have known that in the previous August he had been treated by Dr. Malloch for this same disease which ultimately caused death.

Now, I have had a good deal to do with the settlement of death claims during the past eight years in connection with the Mutual Reserve, and I can assure you that in no case have I ever known the Mutual Reserve to take an unfair advantage of beneficiaries; in fact, my experience has been that in all cases the directors of the Mutual Reserve are most anxious to deal liberally with their policy-holders. If there is any other information you would like with reference to this matter I shall be very glad to give it to you. Would you kindly return me the conditional receipt, and the brief covering this Gowland matter, which I enclose.

Yours truly,
W. J. McMURTRY,
Manager.

Mutual Reserve Fund Life Ass'n Offices,
Toronto, 19th July, 1897.

—"I suppose," said the amateur botanist," "that orchids are the most expensive plants in the world." "I am not so sure of that," replied Mr. Dinwiddle. "I have seen the assertion that $500,000,000 is invested in electric light plants in this country." — *Pittsburg Chronicle-Telegraph.*

GOLDEN ALASKA AND BRITISH AMERICA.

Much is being heard just now of extraordinary gold finds in British territory near the boundary of Alaska. A San Francisco despatch of 16th inst. says that the Associated Press has received a letter from H. A. Stanley, president of the Binghampton, N.Y., Evening Herald Company, telling of wonderful gold discoveries of Alaska. Mr. Stanley wrote from St. Michael's Island, where he stopped on his way to the Yukon mining region. Writing under date of June 30, he says: "The steamer 'Excelsior,' of San Francisco, was the first vessel to push her way through the ice to this station. The 'Portland,' from Seattle, arrived four hours later. From these vessels we learned for the first time of McKinley's election, the result of the Corbett-Fizsimmons prize fight, and other news of the fall and winter. The ice went out of the Yukon about June 15, and the river steamer 'Portus H. Wear,' which wintered at Dawson, 225 miles up, reached St. Michael's June 27. The 'Wear' brought authentic news of some of the most wonderful gold strikes in the world's history, and brought also some forty-five miners, every man bringing in $5,000 to $100,000 of dust, and nuggets with an aggregate of more than $1,000,000

"The richest gold strike the world has ever known was made in the Klondyke region last August and September, but the news did not get even to Circle City until December 15th, when there was a great stampede over the 300 miles intervening between there and the newer fields. On August 13th, George Cormack made the first great strike on Bonanza Creek, and on August 19th, seven claims were filed in that region. Word got to Forty-mile and Circle City, but the news was looked upon as a grub stake rumor. On December 15th, however, authentic news was carried to Circle City by J. M. Wilson, of the Alaska Commercial Company, and Thomas O'Brien, a trader. They carried not only news but prospects, and the greatest stampede ever known in this part of the world commenced. Those who made the 300 miles first struck it richest. Of all the two hundred claims staked out on the Bonanza and Eldorado creeks not one has proven a blank.

"In all, about seventy-five lucky miners have reached St. Michael's. Some brought but a portion of their clear-up, preferring to invest other portions in mines they know to be rich. Among the most lucky are J. J. Clements, of Los Angeles, who has cleaned up about $175,000. He brought out $50,000 and invested the rest. Prof. T. C. Lippy, of Seattle, who brought out about $50,000 and has $150,000 in sight, and who claims his mine is worth $500,000 or more; William Stanley, of Seattle, who cleaned up $112,000; Clarence Berry, $110,000; Henry Anderson, $55,000; Frank Keller, $50,000; T. J. Kelly, $33,000; William Sloane, of Nanaimo, B.C., $85,000, and at least thirty more who will not talk, but stand guard over the treasure in their staterooms."

Commenting upon these San Francisco reports, the New York *World* says there are well-informed men who look upon the reported discoveries as exaggerated. One of these is F. Hobart, associate editor of the *Engineering and Mining Journal*, at No. 253 Broadway, who was interviewed, and said:

"Yes, I have read these stories, but, to be frank, I do not credit them. Our information, which is detailed and positive, makes it impossible for me to accept the roseate announcement that the Yukon runs over a bed of virgin gold.

"As a matter of fact some few persons have struck fairly rich placers in the Yukon district. But the large majority of gold seekers in that barren country have been stranded. There is only a placer yield on record for this section. No quartz has been discovered—not a fragment. Of course the placers fed with gold presumably washed out and worn out during ages from the mountains indicate the existence of rich quartz deposits. Along the coast conditions are different. There we have the quartz mines of Douglas Island, Berner's Bay, and Sumdum, all rich, and one—the Alaska Treadwell—ranking as the largest in the world.

"Our latest advices from the Yukon country are far from roseate. Miners have been arriving in numbers all through the spring, but only at a few points have the placers paid well. Now comes this story that the waters of the Klondyke country run with mingled water and gold dust. I cannot credit it. We have heard direct from the Klondyke mines, and know that some of them have been fairly successful. I cannot say positively who are behind these boom stories. About two years ago hundreds of venturesome miners drawn to the Yukon by false reports of its fabulous wealth were quietly brought home free of charge by the transportation companies.

"But even if the Yukon gold fields prove to be peculiarly rich, it will mean comparatively little to the world. Only the hardiest and most experienced miners could hope to prosper in that desolate land. For eight months of each year no work can be done. The long winter is of Arctic-like severity. Into four months the miner must crowd a year's work."

BOUNDARY CREEK.

Although Boundary Creek is not experiencing anything like a boom, there are now more prospectors out in the hills and more men on the pay rolls than at any previous time in the history of the district. As a consequence new finds are being made and several properties are now entering upon the stage at which they may fairly lay claim to be called mines. The indications are that before snow flies this year it will have been unmistakably demonstrated that there are at least a dozen producing mines in the district, with a favorable prospect of later developments proving the existence here of at least double that number.

Taking the Boundary Creek mining camps in alphabetical order, one of the most important comes first. Central Camp has within its limits some valuable properties and can show an amount of development work proportionately large. Just now the No. 7, owned by the Boundary Mines Company, of New York, attracts most notice. The manager, Mr. F. Keffer, M.E., of Anaconda, claims that his estimate of $350,000 worth of ore between the surface and the 139-foot level along a distance of 700 feet, is a conservative one, and the result of careful calculation. This leaves out of account ore recently met with in new workings beyond the limit just given.

Copper Camp, with its big showings of ore, said to be low grade, is not at present having anything like the attention it appears to deserve. On the contrary, its near neighbor, Deadwood Camp, possesses one of the most noticed mines of the district, the Mother Lode, owned by the same proprietary as the No. 7. With an ore body, proved by tunnelling to be 185 feet wide, it is naturally regarded as a valuable property. A winze is now being sunk from the floor of the tunnel to ascertain whether the ore lives down. On the Sunset claim in the same camp a 250-foot tunnel is being driven, with the object of cutting the ledge.

In Providence Camp, the Boundary Creek Mining and Milling Co., of Greenwood, is now developing three of its claims, viz., the D.A., G.A.R. and O.B., a vein of about two feet of good ore being opened up by a shaft on the G.A.R., and the O.B. quartz vein gives promise of improving with depth. Some good assay returns in copper, up to 16.3 per cent., have been obtained lately from ore taken by Mr. Bielnburg from his Anaconda claim. Work is still in progress at the Skylark claim in Skylark Camp. There is not much being done at present on the Republic Mining Company's claims in Smith's Camp, work having been temporarily suspended on two of the trio—the Republic, Last Chance and None Such. Mr. J. C. Haas has met with ore on the Golconda assaying up to $35 13 in gold and has stripped the ledge for over 400 feet along the surface.

A mining plant, consisting of boiler, hoist, pumps and two drills, is expected to arrive shortly for the R. Bell, in Summit Camp, which claim is owned by the Klough Gold and Copper Mining Company, of Salt Lake City, Utah. Another claim in the same locality which is thought highly of is the B C., from which some excellent ore was got lately. Last on the list, but by no means least, is the Wellington Camp, in which are the Winnipeg and Golden Crown among other claims.—*B. C. Mining Record.*

BICYCLES AND HARD TIMES.

There are persons in the world who firmly believe the bicycle to be a potent factor in the present hard times. Here is the way one of them attempts to support his belief. In Rochester, N.Y., a city of 180,000 inhabitants, there are more than 20,000 wheels, as is shown by the official figures, every wheel being registered, according to a city ordinance, at the office of the city clerk.

"Now," says the man, "30,000 wheels in a city of 180,000 mean one wheel to every six men, women, boys, girls and babies. Bought, as so many of them are, on the instalment plan, they must cost on the average $70 apiece. At that rate, the money invested in wheels in Rochester amounts to $2,100,000. Now it is not probable that any of the purchasers of these wheels earn any more money because they have them, or have in any way increased their incomes. They must, therefore, have spent in that one city $2,100,000 less for the necessities and comforts of life, clothing, shoes, food, and the like; and this, of course, makes the sales of those commodities just so much less. In the entire country it must amount, literally, to hundreds of millions.

Of course there is another side to this story. Not all the money spent on bicycles is diverted from the necessities and comforts of life; to some extent it means merely a substitution of one form of amusement or luxury for others. In many cities, notably Milwaukee, Minneapolis, Rochester and Washington, the street car lines have suffered severely, and so have various forms of indoor and outdoor amusement establishments. The savings bank men are the latest to complain. They say that the wheels are responsible for a falling off in deposits of many millions.

THE STOCK EXCHANGE.

The Montreal and Toronto Stock Exchanges have shown considerable activity during the week. The increased earnings of the two important railway systems of Canada are taken as an indication of general industrial improvement throughout the country, which, combined with the immediate prospects of an abundant harvest to be marketed at advanced prices, gives a feeling of confidence in Canadian securities as a subject of investment. On Wednesday, C. P. R. stock was reported as opening strong in London at 69¼, and the Toronto and Montreal Exchanges were quick to respond to this improvement, transactions having been made on the Toronto Exchange during the day at 70½. The increased earnings of the Toronto and Montreal Street Railway Companies, as compared with last year, added strength to the value of their shares. The leading industrial securities are very firm. Toronto Electric has been in good demand on the local Exchange. Bank shares have held steady and firm, while some gain has been made in assurance stocks. The loan companies, however, have failed to follow the general upward movement, and the shares of a number of important corporations of this nature remain depressed.

RAILWAYS IN CHINA.

(Railway Age.)

The railway is now nearly completed from the sea coast to Pekin, and the inhabitants of the capital city of China have had their first sight of that terrifying foe to superstition and national isolation, the locomotive. Next month work will begin on the Chinese branch of the trans-Siberian railway through Manchuria, which is very likely to find its terminus at Port Arthur, and will open a wide door into Northern China; while preparations are going on for a long line to Shanghai and the south, and for several shorter roads. Ties and timber are already being shipped from Puget Sound to Chinese ports, and American locomotive builders and supply dealers are preparing to obtain their share of the business which railway building in China is sure to develop in the future. American railway men, too, will eventually, perhaps, find considerable place on Chinese railways, but newspaper reports about the hiring of hundreds of enginemen in this country at fabulous wages are premature and untrue. Railway projection and building in China will proceed much more leisurely than has been the practice in this country.

—Decker, Howell & Co., bankers and brokers of New York, have failed, with no preferences. This firm was one of the largest brokerage houses in the State. The firm failed five years ago for $12,000,000, but paid up within sixty days and resumed business.

The Imperial Life Assurance Co.

Incorporated by Special Act of the Government of Canada, A.D. 1896.

OF CANADA.

26 KING STREET EAST, - TORONTO, ONT.

BOARD OF DIRECTORS:

PRESIDENT....THE HONORABLE SIR OLIVER MOWAT, P.C., G.C.M.G., Minister of Justice

VICE-PRESIDENT....JOSEPH W. FLAVELLE, Esq., Managing Director The William Davies Company, Limited, and Director Canadian Bank of Commerce.

THE HONORABLE SIR MACKENZIE BOWELL, P.C., K.C.M.G.	Senator, Ex-Prime Minister of Canada.
THE HONORABLE J. D. EDGAR, P.C., Q.C., M.P.	Speaker House of Commons.
THE HONORABLE WM. HARTY	Commissioner Public Works, Ontario.
THE HONORABLE GEO. A. COX	Senator, President Canadian Bank of Commerce.
THE HONORABLE S. C. WOOD	Managing Director Freehold Loan & Savings Company.
JOHN HOSKIN, ESQ., Q.C., LL.D	President Toronto General Trusts Company.
J. J. KENNY, ESQ	Vice-Pres. Western and British America Assurance Company.
J. H. PLUMMER, ESQ	Assistant General Manager Canadian Bank of Commerce.

F. G. COX, ESQ	Managing Director.

BANKERS: CANADIAN BANK OF COMMERCE. | SOLICITORS: MESSRS. EDGAR & MALONE.

CHIEF MEDICAL REFEREE: JOHN L. DAVISON, B.A., M.D.C.M., M.R.C.S.

Capital Fully Subscribed, at 25 per cent. premium, $1,000,000

10,000 Shares of $100 Each.

I. In 1868, the first year in which any reliable records were published, the total amount of life assurance premiums collected in Canada was $960,331. By reference to the last official returns from the Dominion Government Insurance Department it will be seen that for 1896 the total life premiums amounted to $10,604,577, and of this sum no less than $4,529,123 went to foreign companies, a serious and unnecessary drain upon the resources of this country. These and other equally important facts have led the promoters of the Imperial Life Assurance Company of Canada to feel that an institution conducted upon conservative lines, with a large cash capital, a large government deposit and a directorate commanding the confidence and respect of the public, will at once take its place side by side with the older and more successful life assurance institutions of this country. The fact that at the end of last year policies upon residents of Canada totalling no less than 132 million dollars were carried by foreign companies, indicates the room for increased home enterprise.

II. The issue of one million dollars capital at a premium of 25 per cent. places this company at its commencement in the very first rank, and by affording its policy holders and annuitants unquestioned security enables it to start with the certainty of doing a large and profitable business.

III. The insurance plans of the company will be formed on attractive but thoroughly tested lines, assuring best permanent results to both policyholders and shareholders.

Applications for Agencies will be received by

F. G. COX, Managing Director.

FRENCH SHIPPING BOUNTIES.

The British consul at Rouen, in his last report, refers to the effect of the bounties on shipping construction and navigation, so far as the new dockyard at Rouen, the Chantiers de Normandie, is concerned. Last year thirteen vessels, of a gross tonnage of 26,383 tons were either delivered or placed on the stocks. They were mostly of one type and of the same size—three and four-masted sailing-ships of 1,950 tons. The bounty on the construction of each of these vessels is something over £5,000, and for the whole the dockyard got from the nation £68,595. With such liberal aid as this, shipbuilding, it might be thought, must yield rich returns; but the fact is that this dockyard has not paid a penny to its shareholders in the three years in which it has been in full work. Instead of profit, the greater part of these vessels have been built at a loss, and quite recently an extraordinary meeting of the shareholders has been called to increase the capital and to reorganize the enterprise in a way which will now be beneficial to the original shareholders. So much for the construction bounties; but the navigation bounties are expected to insure good returns. The consul takes the two first voyages of two of the new vessels, and shows what the returns are expected to be. In one case, the vessel sailed from Rouen for Newcastle, in New South Wales, whence it is to go to San Francisco for a cargo of wheat for Rouen—a total distance of 32,128 nautical miles—which gives her a right to over £4,000 for navigation bounties, and shows a profit of about £4,250, being a return of over 25 per cent. on the subscribed capital, if no unforeseen circumstance should upset the calculations. In the second case, the vessel went from Rouen to Swansea, and thence with a cargo of coal to San Francisco, whence she returns with wheat, and the profits are expected to be about £4,500, of which about £3,500 are made up of bounties, while the proportion of profit to the capital invested is also very nearly 25 per cent. "In these days of low freights and close competition what shipping companies in England would venture to hold out similar prospects to their shareholders? Yet such is the timidity or wise prudence of the French in anything approaching maritime enterprise that the greatest difficulty has been experienced in forming a company to build a steel sailing ship of the type of the 'Louis Pasteur' (the first of the two above mentioned) and to run her as a commercial undertaking with Rouen as her port of registry."

AMERICAN EXPORTS, ETC.

The extraordinary exports of this country [the U.S.] for the past fiscal year, amounting to over $1,000,000,000] and resulting in an excess over imports of $287,500,000, makes a most gratifying showing, and is in itself a strong incentive for the growth of confidence in business circles. The present United States Treasury balance, showing $232,000,000, $142,813,000 of which is in gold, is also a most favorable feature. Another favorable factor is that there is not only a promise of good crops, but also of high prices; so that we are now witnessing a strong stock market and also one equally so for both grain and cotton, the three markets being backed by confident buying. This is an unusual circumstance and one which Wall street has not for a long time experienced. It foreshadows also that the import of gold wlll soon start this way in exchange for our products and securities. Europe will be sure to buy both ni large quantities very soon. Instead of Argentina, India and Australia being exporters of wheat, as heretofore, and in consequence serious competitors, they are likely to import more or less.

The exports of wheat from this country from the last crop amounted to 147,000,000 bushels. Appearances indicate that a much larger quantity will be required from our present crop. This insures a remunerative price for the product of this year and prosperity to the farmer. It is an important factor to note that the sections of the country known as the silver-producing States have now become gold producers on an important scale, owing to the enterprise of the people having been turned to hunting for the yellow metal in place of the white, because the demand for the one is universal and the other but limited.

It is generally conceded that the advance in American securities has been without any material help from London, the transactions from that quarter for some time past having been purchases and sales for moderate profits and quick turns. This, therefore, places us in a position of not being compelled to take back our securities from abroad at high prices. They are not now held in large quantities in speculative hands on the other side.—*Henry Clews' New York Circular, July 17th.*

TIMBER TRADE IN LIVERPOOL.

Messrs. Farnworth & Jardine's wood circular, dated Liverpool, 1st July, says:

"The arrivals from British North America during the past month have been 38 vessels, 45,348 tons, against 32 vessels, 32,825 tons, during the corresponding month last year, and the aggregate tonnage to this date from all places during the years 1895, 1896 and 1897 has been 128,933, 185,708 and 197,349 tons respectively. Business during the month has been quiet, and the deliveries considerably interfered with by the Whitsuntide and Jubilee holidays. Imports have been quite ample in the sensitive state of our market, but as numerous arrivals have only come to hand during the past week, and are still on the quay or in course of discharge, an improvement in the consumption should be witnessed during the coming month; values have been difficult to maintain, a decline in some articles being reported; stocks are all sufficient.

"CANADIAN WOODS.- Of waney and square pine several parcels, chiefly waney pine, have arrived on contract and are being sent direct into consumption; values are well maintained. Square pine continues neglected. Red Pine has not been imported; there is no change in value and but little enquiry. Oak has come forward freely; most of the arrivals of 1st-class wood, although sold, is still on the quay, but will be moved off at an early date; prices are steady, but the stock is sufficient. Elm has been imported moderately; there is fair enquiry, but the stock is ample. Ash still comes forward too freely from the United States ports; the deliveries have been large, but prices are easier. *Pine, Deals, Boards, etc.*—The arrivals have been heavy, but the deliveries continue satisfactory, and the stock is not excessive; there is little change in value to report, although a few sales have been made at slightly easier rates.

"NEW BRUNSWICK AND NOVA SCOTIA SPRUCE AND PINE DEALS.—Of spruce deals the import has been too heavy, and although the deliveries continue fair, buyers show little confidence in the future, and sales can only be effected at lower rates. The stock, although much larger than same time last year, is not excessive, about 9,000 standards of the present stock of 13,950 standards being on the quay or not discharged; still more moderate supplies are necessary to prevent a further decline in value. *Pine Deals.*—A few parcels, chiefly from Miramichi, have arrived, but are only saleable at very low rates.

"BIRCH.—Both logs and planks have come forward more moderately; the demand and values, however, continue unsatisfactory; stocks, although less than last year, are quite ample.

"UNITED STATES OAK.—From Mobile there has been an import of about 42,000 cubic feet, and from Norfolk, Va., several parcels of waney oak. The demand is quiet, stocks are sufficient, and prices rule low. *Oak Planks.*—Although the import shows a reduction on recent months, it has been too heavy; stocks are very large, prices low, and sales most difficult to effect. Second quality are practically unsaleable. The total stock amounts to 452,000 cubic feet.

"United States staves have arrived freely; there is no improvement in values to report, and stocks are heavy.

"OREGON AND BRITISH COLUMBIAN PINE.—There have been no arrivals; the demand has been slightly better, but there is no change in value.

"PITCH PINE.—The arrivals during the past month have been 10 vessels, 13,111 tons, against 13 vessels, 18,438 tons, during the like period last year. Of hewn the import has been large, but there has been a good consumption, so that we have sufficient though not excessive stock. Of sawn the import has been small for the time of the year, the consumption has been fairly good, and stocks are light, being less than one-half held this time last year. *Deals* and *Boards* have again come forward freely from the various Gulf and Atlantic ports; there has been a good consumption, but stocks have increased, and are now ample.

"SEQUOIA (Californian Redwood).—There has been no import, and with a rather better consumption during the month, stocks are further reduced, being now about 71,000 feet."

Commercial.

TORONTO MARKETS.

TORONTO, 22nd July, 1897.

DAIRY PRODUCTS.—The receipts of butter have not been large this week. The hot weather is very unfavorable for shipping purposes, and merchants discourage shipments at present. The quality of the receipts coming forward shows serious deterioration. For dairy butter there is little local demand, while the export trade is all but nil. In creamery there is, however, a better feeling. The local consumption is fairly large, while exporters find a brisk market abroad. We quote dairy, low grades, 8 to 9c.; better grades, 11 to 12½c. per lb.; creamery, tubs, 17½c.; prints, 17½ to 18½c. per pound. The demand for cheese is rather light; local jobbers are quoting 8½ to 8¾c. per lb. A firmer feeling exists in evaporated and dried apples, prices having advanced ¼ to ½c. per lb. Eggs are a drug upon the market, and stocks show considerable deterioration by the hot weather. Merchants quote eggs at 9 to 10c. per doz. The supplies coming forward are in excess of the demand.

GRAIN.—Active trading has taken place in the wheat market during the past several weeks. The statistics of the world's wheat supply are very strong, and in view of the good export demand prices have advanced in the local market about 3c. per bushel since our last report The prospects for the 1897 crop in Canada are excellent. In Western Ontario several fields of wheat have already been cut, and harvesting will be general in a week or ten days. A Montreal bank has secured through its agencies in Manitoba a large number of reports on the condition of the crops and agriculture along the lines of the Canadian Pacific, the Northern Pacific and the Manitoba and Northwestern railways, showing an increase from 5 to 33 per cent. in the acreage, calculated to average 20 per cent. for the whole province. It is barely likely, however, that this year the increased yield will be equal to the greater crop area. The farmers have had some unfavorable conditions to contend with. Late frosts kept back the wheat plant; dry weather resulted in short straw in some sections; hail and the gophers did mischief in others. The general result is that in a considerable part of the province the crop is from a week to a fortnight behind the average. Favorable weather can do much to repair what is backward, and it is remarked that some of the correspondents noted that rain was falling when they were writing, and the succeeding warm weather has attracted general attention. There is an easier feeling in oats, and prices have declined 1c. per bushel in view of heavy shipments from the Western States. Barley is quiet. Rye continues very firm. Peas are in good demand. There is little movement in corn. Buckwheat continues dull.

The stocks in store at Port Arthur on July 10th were 1,611,924 bushels, and there were received 199,887 bushels, and shipped 657,824 bushels, leaving in store on July 17th, 1,153,987 bushels.

Hides and Skins.—There bas been little change in market conditions since our last report. The merchants are paying 8½c. for green hides and quoting cured at 8¾c. per lb, It is likely that the imposition of the 15 per cent duty which the United States Congress proposes to place upon hides will effect a decline in prices here. Advices received from the Western States, July 21st, reported that the volume of business transacted was small, but that owing to the prospect of an import duty on foreign hides packers were firmer in their ideas and held for full values. The close was quoted firm at 10 to 10½c. for native steers; 9½ to 9¾c. for butt brands; 10 to 10½c. for heavy Texas; 9c. for branded cows; 8¾ to 9c. for Coloradoes; 9¼ to 9¾c. for heavy native cows, and 10 to 10¼c. for light ditto. Calfskins in the local market are quiet at 8 to 10c. Pelts and lambskins are quoted at 50c. each. Nothing has occurred to relieve tallow from its depressed condition.

Hops.—Trade in the local market is very quiet. Canadian hops, 1896, are scarce, and when of good quality obtain good prices. Merchants here are quoting 10 to 12c. per lb. A grower offered a choice lot of Canadian hops this week in Toronto at 14c per lb., but it is not likely that at this price he found a buyer. A New York advice of recent date reports that "a fair business only is being effected here, and the interior markets, to all accounts, are rather quiet, aside from the quasi speculative movements in contracts for 1897 crops. Prices are quite steady, however, on stock that will grade prime to choice in quality, but rather weak on the lower grades. Crop advices from most quarters were of a favorable tenor. It is too early to base much upon the reports as to the condition of the Canadian hop yards, but present indications point to an average yield."

Leather.—The movement in leather during the present month has been full of disappointment. It was thought that the manufacturers would commence to buy supplies for the new season's trade about the middle of the present month, but there are few indications that this movement is beginning. Tanners are quoting leather at the same prices asked when hides were worth 7c. per lb., notwithstanding that an advance of 1½c. per lb. has taken place in raw material. Sole leather remains quiet but firm in price at previous quotations.

Provisions.—Active trading in pork products continues and all lines are now getting within small compass. The present price of live hogs, 5⅝c., warrants, it is claimed, higher prices for provisions. Rolls are very firm and have advanced 1c. per lb. during the past ten days. There is a good export demand for Canadian bacon. Exporters look for a better demand in September for Canadian and United States products when the small supply of native hogs in Europe will begin to have its influence on both English and continental markets, both of which relied largely upon those sources last year, and to much more than an average extent; whereas this year they will be more dependent upon us for these supplies than usual.

Wool.—Another week of tariff uncertainty has passed. Advices were received early in the week that shipments should be made to the United States prior to Friday, 25th inst., and the supplies of fleece wool coming forward have been promptly sent across the line. For fleece wool of the best description 21c. has been paid, but should the Dingley tariff bill become law this week, it is likely that a decline of 2 to 3c. per lb. will be made in merchants' buying prices. There is little fleece left in this country as a result of the unusual delay in Congress in regard to tariff matters.

MONTREAL MARKETS.

Montreal, 21st July, 1897.

Ashes —The market shows no buoyancy or activity, and a cable a few days ago from Bristol reports a decline in prices offered there. Only about 150 brls. are in store here, mainly pots, and though receipts are small, values continue low. We quote first quality pots $3.00 to $3.05, seconds about $2.80, and pearls $4.30 to $4 35 per cental.

Cements and Firebricks.—Business in these lines is now quiet in character, and the total receipts for the week ending to-day are 500 brls. of English cement and 60,000 bricks. Quotations are for Belgian cement $1.90 to $2, English $2 to 2.10; firebricks, $15 to 21 00 per thousand.

Dry Goods.—Sorting orders for seasonable goods are still coming to hand in fair number, and some houses are shipping fall goods already, but a good proportion of retailers are apparently not in a hurry to fill up their shelves with these latter goods, and with the present facilities for prompt shipment there is certainly no object in their doing so. Some houses profess to find a little improvement in payments. Advices from Europe would lead some to anticipate a possible stiffening of values in cashmeres and other lines of woolen dress goods, owing to the strong condition of the market for raw wool.

Dairy Products.—The week ending the 17th inst. was another big week for cheese shipments, the figures totalling 104,408 boxes, almost double the quantity of the corresponding week last year. London topped the list, taking 35,000 boxes, closely followed by Bristol with 33,000 boxes, Liverpool 16,400, Glasgow 9,800 boxes, Aberdeen and Hull about 3,000 boxes each, and small lots to Hamburg, Manchester, and Belfast. Of butter the exports were 3,234 pkgs. Since last writing the cable quotation for cheese has eased off a little; local quotations are 8 to 8¼c. per lb. for Western, Townships 7¾ to 8c., Quebec 7½ to 7⅝c. Creamery butter is steady at 17 to 17½c., Townships dairy 14 to 15c., Western dairy 12 to 13c. per pound.

THE VISIBLE SUPPLY.

The visible supply of grain in the United States and Canada, with comparisons, is as follows :—

	July 19, 1897.	July 12, 1897.
Wheat, bush.	167,242	155,624
Corn	36,788	23,970
Peas	169,416	194,931
Oats	451,660	410,696
Oatmeal............	121	235
Barley	320,297	34,608
Rye	41,712	35,165
Buckwheat	2,481	4,889
Total grain..	1,209,484	885,690

The stock of flour at Montreal was 19,767 barrels on July 19th, as compared with 25,572 barrels on July 12th.

THE U. S. WHEAT CROP.

The following table gives the estimate of the United States current wheat crop by the authorities named:—

	Bushels.
Duluth Commercial Record......	600,000,000
Minneapolis Market Record......	575,000,000
Orange Judd Farmer	575,000,000
Prairie Farmer	529,000,000
Cincinnati Price Current	550,000,000
Chicago Daily Trade Bulletin	550,000,000
Toledo Market Report	500,000,000

Groceries.—The demand for sugars may now be called almost active. Prices remain unchanged at 4c. for standard granulated, at the factory, and 3¼c. the lowest for yellows. Further lots of foreign refined beet root sugar continue to arrive, but the local refiners have not as yet done anything to meet the competition from this quarter. Laid down cost for German sugar is calculated at about $3.60 per cental here; buyers, in some cases, insist on guaranteed weights, which from the nature of the packages, being bags, it is hard todo, as there is liability for the sugar to sift through on frequent handling. Molasses is dull and somewhat easy, with liberal receipts so far, but three or four more cargoes are still expected. Some fancy samples of new machine made China black teas are being shown; they are designed to compete with the Ceylon and Indian goods, and while fairly matching them in style, have not the flavor or drawing qualities of the latter goods. A fair number of sales are reported of new Japan teas at about 16½c. Another C.P.R. steamer is reported on the coast to-day, with further fair shipments for this market. It is said there is a possibility of the Japan Government prohibiting the export of third pickings. A sale of a car lot of gallon apples is reported at $1 25, and we hear of a 500-case order for new tomatoes being booked at 70c. A Denia cable to hand this week, notes Valencia raisins at 16s. 9d. for shipment first half of August; 14s. 9d. for second half of August, and 12s. 9d. for October. No quotations for currants have yet been received.

Leather.—There is really no more doing in this line. Shoe orders are not nearly up to last year, and manufacturers ars buying only in a limited way. The market is steady, however, at quotations, and the unsettling effect referred to last week has disappeared with the restoration of hide prices to the old level by the local association of hide dealers. We quote :— Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c.; Scotch grained, 30 to 35c.; western splits, 20 to 22c.; Quebec do., 15 to 17c.; juniors, 14 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.;

harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c

HIDES.—The local association of hide dealers have not been able to sustain the position they took last week in putting the price of green hides down to the basis of 7c. per lb. to butchers, and restored the quotation on Monday to 8c. The competition from opposition buyers had something to do with this, but the strength of outside markets also helped. They had contracted with tanners for quite a fair quantity of hides at 7½c., and have still some orders on that basis to fill. Calfskins are regularly quoted at 8 and 6c. per lb., though in some cases it is reported 9c has been paid for No. 1 lambskins, and clips 25c. each.

METALS AND HARDWARE.—Some further fair orders are reported for Hamilton iron at quotations Siemens and other domestic brands seem entirely out of the market, and little is being done in Scotch iron. Warrants are easier and cabled 44s 1d. Domestic bars are easy at $1.30 as a mill price. Terne plates are very scarce on spot, a difficulty being reported in filling orders. Tin plates are also very firm. Canada plates are reported to have been sold in quantity below $2 10, but jobbing prices are as quoted. We quote :—Summerlee pig iron, $17 to $17.50 ex-ship; Carron, No. 1, $17: No. 3, $16 25; Ayrsome, No. 1, $16 50; No 3, $16; Shotts, $17 25 to 17.50; Carnbroe, $17.00. ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16 00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13.00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No 16 and heavier, $2.15; tin plates —Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D.Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 35 to 3.50; sheet, $4 to 4.25; shot, $6 to 6.50: best cast-steel, 8 to 10c.; toe calk. $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1 90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4 75 to 5.00; American spelter, $4 60 to 4.75; antimony, 8½ to 9c.

OILS, PAINTS AND GLASS.—The demand is now comparatively slow in these lines, and nothing of very special interest presents itself. The association of oil and turpentine men in the West is said not to be working harmoniously, but prices are steady locally as revised last week. With the advancing season Paris green is a little lower, and is now offered at 13c. in bulk, and 14c. in pound packages. We quote: Turpentine, one to four brls., 41c.; five to nine barrels, 40c., net 30 days. Linseed oil, raw, one to four brls., 41c.; five to nine brls., 40c.; boiled, one to four barrels, 44c.; five to nine brls. 43c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½; No. 2, $4.25; No. 3, $3.87½; No. 4, $3.50; dry white lead, 4¼ to 4½c: genuine red do., 4 to 4½c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 13c. in bulk; packages, 14c., window glass, $1.25 per 50 feet for first break; $1 35 for second break; third break, $2.80.

WOOL.—The moderate degree of activity noted last week on the part of millmen in buying, has been fairly maintained, and local holders of Cape wools are indifferent sellers except at an advance, and quote 16 to 17c. stiff. London advices show a maintenance of the advance last week noted, and a cable received here from the Cape, Monday, announce an advance there of about a half penny. B.A. is quoted at 30 to 35c. In domestic we hear of no transactions.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
Thos. Walmsley, Treas. Hugh Scott, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 18^5, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.

LESSENED TRAFFIC THROUGH OUR SAULT CANAL.

Official returns furnished to the Department of Railways and Canals indicate a considerable falling off in the business of the upper lakes this season. The traffic through the Canadian canal at Sault Ste. Marie is not half what it was up to this time last year. Fleets of the largest vessels on the lakes are laid up for the present season, there being no business to keep them engaged. Besides this the Canadian canal has suffered a falling off in receipts from the completion of improvements on the American side, which, during their progress, had the effect of driving all the trade into our channel. The American canal returns show, however, the same decline as the Canadian, which is almost certain to continue till the close of the present season. In the month of April 32 vessels passed through the Canadian Soo, with 22,065 tons of freight; in May, 397 vessels of 295,449 tonnage, and bearing 336,745 tons of freight, and in June, 686 vessels, with tonnage of 612,255 tons and freight to the extent of 667,258 tons. The total up to the end of June was therefore 1,097 vessels of 929,769 tonnage, and carrying 1,015,253 tons of freight between Superior and the lower lakes.

DIAMOND JUBILEE LITERATURE.

In all that has been written concerning the Diamond Jubilee, the personality of the woman who has outlived almost every man or woman old enough to remember intelligently the time when she ascended England's throne, has been kept most prominent. Only incidentally, with one or two exceptions, have the great historic, political, social, scientific, educational, religious, and literary characters and characteristics of the past sixty years been dealt with. The articles by William T. Stead in the Review of Reviews, by Thos. F. Bayard in the Century Magazine, by H. D. Trail, J. Henniker Heaton, W. E. Bear and E. Salmon in the Fortnightly Review, by Sir Richard Temple, M. de Pressense, and Theodore Barth in Cosmopolis (all in June issues) are worthy of close study. Speaking of the personality of the Queen and the far-reaching family influence of the Royal Family in European politics, M. Pressense says :

"Imagine what this aged lady, so modest in appearance, who is drawn about in her grounds at a walking pace in a donkey carriage, can say to herself : 'My son will reign one day over the United Kingdom ; my grandson is Emperor of Germany and King of Prussia; one of my granddaughters is Empress of Russia ; I have a son who reigns over the modest duchy of Saxe-Coburg Gotha ; one of my daughters was Empress of Germany ; one of my grandsons is Grand Duke of Hesse; I have granddaughters who will reign over Roumania and Greece; the King of the Belgians and the King of Portugal are my cousins; all Germany is full of my offshoots and of their allies, and outside of the Catholic dynasties of Austro-Hungary, of Italy, of Spain, and the Bourbons of France, there is not a royal house which does not lift its eyes toward me as towards the venerable mother and source of this inexhaustible stream of majesties and highnesses.'"

All persons of culture will go back, when sounds of Jubilee have died away, to the interesting pages of Justin McCarthy, in which he gives his frank account of such political contemporaries as Balfour, Bright, Chamberlain, Dilke, Gladstone, Harcourt, Jameson, Labouchere, Lowe, the two Morleys, Parnell, Peel, Rhodes, Rosebery, and General Wolseley, and such men of letters and art as Browning, Freeman, George Eliot, Lord Leighton, Madox Brown, Cardinal Manning, Mill, Morris, Rossetti, Stevenson, Swinburne, Tennyson, and many others, with all of whom he came in personal contact.

"The Private Life of the Queen," by a member of the royal household (Appleton), differs from all the other books of which the Sovereign of England is the subject. "My intention," this writer says, "is merely to paint a family portrait of a dear old lady who, were she the chatelaine of a country house, or the schoolmistress of a primitive country village, would be admired and loved by her neighbors in the parish for her wisdom and good works, and by her family and servants as a good mother and mistress. The wall and pictures will faithfully reproduce the patterns familiar to her in her own private rooms; the pictures will be those which she has gathered round her as mementos in her privacy of all she holds worthy in the past and present, and the accessories will be exact replicas of those of which she makes daily use."—Literary News.

AMERICAN LUMBER MARKETS.

Advices from Kansas City, Missouri, to the North-Western Lumberman, June 22nd, say : The lumber situation in this section is brightening every day, and as the season advances with continued favorable crop conditions all over this territory, the lumbermen have reason to feel encouraged.

The cypress trade has been worked more thoroughly in this section this season than heretofore, and the wholesalers here who handle this stock say they are having a good demand. The dealers are using more common cypress for fencing, etc., than ever before, and it is also in good demand for flooring, siding, finish, etc. The outlook for fall trade is good, and the cypress men expect to put lots of cypress into this territory this fall.

A correspondent of the same paper, named Geo. Prentiss, writes as follows from a point in the State of Mississippi, to illustrate the market :

"It is a case of under-consumption—not over-production. Let me give you an instance as related to me by a customer, who asked me to delay shipping a number of cars of cypress. There is a saloon over by that rolling mill; when the works are in full blast that saloon sells 14 barrels of beer a day. Now the mill runs only a part of the time, the men have but little money, and that saloon sells two barrels of beer a day; the breweries do not need new tanks, and give us no orders, and we don't want that cypress shipped. Our stock of cypress is low, and if orders should come in on us as they do in fairly good times, we would want 10 or 15 car loads of cypress as quick as you could get them to us."

REDUCED BANKING PROFITS.

Smaller banking profits are the natural results of the increase of competition and the continued growth of the volume of capital seeking profitable investment. The report of the Comptroller of the Currency for the year 1896 shows that there has been a falling off in the rate of dividends paid by the national banks for many years past. In the year ending March 1, 1870, dividends reached the highest point ever paid to the stockholders of the national banks. For that year the dividends paid averaged 10.5 per cent. of capital. In 1894 they sank to the minimum of 6.8 per cent. For the year 1896 the average rate of dividends to capital was 6 9 per cent., and if based on capital and surplus, only five per cent.

The investigation of the dividend statistics shows that the profits on National Bank stock have been steadily decreasing, and that the total surplus of the National Banks is also growing less.

This falling off in profits since the panic of 1893 was to have been expected and may be partly accounted for by the general depression in business. But this is not the only reason. Even if business revives it will not be in the power of the banks to restore the high profits that prevailed in 1870 and for some years after.

The increase in the wealth of the country has made it comparatively easy for any bank established in a community of average prosperity to obtain a reasonable line of deposits, but when these are obtained it is much more difficult to loan them to advantage. To retain them, the banks have to perform without remuneration many services for their customers which at one time yielded a profit to the institution. They have also to pay interest on many lines of deposits that were formerly exempt from this charge. The National Banks further derive very little, if any, profit from circulation.

The chief cause of these disadvantages is the competition that now prevails in the banking business, and which if it continues to increase must surely drive many of the weaker banks out of business. This competition is what forms the main burden of the complaints that are heard from bankers at all the meetings of banking associations. One delegate brings up the subject of the unprofitableness of handling what are known as country checks, but when some remedy for this burden is sought, it is found that nothing will prove effectual as long as this bugbear of competition still remains. No agreement as to the uniform treatment of these checks is found feasible, because each bank fears that it may lose patronage and prestige if it adopts the custom of charging customers for making collections. A bank dare not give up the practice of paying interest on deposits, because it is well known that the customer can easily find another bank which will pay interest for the same account. Many failures can be traced to this desire to show as large a line of deposits as possible, even if profit has to be sacrificed to retain them, or even if the accommodation given to retain the custom is unwise and dangerous to the bank. In good times this competition is not felt so seriously, but in times of depression every bank must suffer from its effects to some extent.

It is not difficult to recognize this cause, but to discover a remedy and make it effectual is something that will tax the highest powers of the banking community. If no united effort is made and things are permitted to drift, it is probable that many banks will in the end find it necessary to go into voluntary liquidation. Nor is it easy to see just how united action can be taken. The stronger banks do not desire nor are they able to undertake to carry out reforms to benefit competitors. The probability is that the effects of continued competition in banking circles will be in the long run counteracted by more economical methods, by the consolidation of capital, and by taking up lines of business not now undertaken. The National and some of the State banks most hampered by legal restrictions will no doubt secure alterations in their powers either by legislation or by changing their character. If Congress sees fit to enlarge the privileges under the national banking laws, it will give relief in some directions. There is business to be done in the country by the extension of banking facilities, but most of the banks have always done business of so local a character that they do not seem capable of using their means in any but the old ruts to which they have always been accustomed. These regular lines of business, too, will grow as prosperity returns to the general public.

In fact banking capital is just now rather too abundant than otherwise, and yet its unequal distribution makes it seem scarce in some parts of the country, and unprofitable from lack of employment in other sections. There has in some respects been a lack of enterprise among bankers in looking up new uses for the means at their disposal. Nor have any of the suggestions yet made seemed to reach the root of the difficulty. There is certainly a lack of homogeneity in the banking methods, when in some localities there seems to be a plethora of banking facilities and in others a dearth. There is as much room in the United States for new development of enterprise as there has ever been, but bankers have in the past always played a waiting game. Less than any other class controlling capital have they been compelled heretofore to resort to the methods commonly employed for drumming up business. In fact there has been a great inertia among bankers in looking up new and profitable methods for the employment of capital.—*The Bankers' Magazine.*

—The largest amount paid for telegraph fees in one week by one firm was when the *Times* paid $30,000 for the cable service from Buenos Ayres during the revolution. This was for one week's despatches.

50 YEARS The Year 1897 is the SEMI-CENTENNIAL

OF THE

Canada Life Assurance Company.

ESTABLISHED 1847.

President, A. G. RAMSAY, F.I.A.

DECISIONS IN COMMERCIAL LAW.

ANDREWS V. MOCKFORD.—Where the object with which the prospectus of a company is issued is not merely to induce application for an allotment of shares, but also to induce persons to whom it is sent to purchase shares in the market, its function is not exhausted when the company has gone to allotment, and the person issuing the prospectus is responsible for the consequences of a false representation contained in it, and known to him at the time to be false, to any person to whom the prospectus has been sent, who is induced by the false representation to purchase shares, and thereby sustains a loss. When a person who has issued the prospectus of a company containing a false representation, known to him at the time to be false, subsequently causes to be published a false representation to the same effect as that of the prospectus, with the direct intent of inducing persons to purchase shares in the company, he is responsible for the consequences of so doing to anyone who, having received a prospectus, purchases shares on the faith of the false representation, and thereby sustains a loss. This is a decision of the English Court of Appeal.

HARDAKER V. IDLE DISTRICT COUNCIL.—A district council being about to construct a sewer under their statutory power, employed a contractor to construct it for them. In consequence of his negligence in carrying out the work a gas main was broken and the gas from it escaped into a house in which the plaintiffs (a husband and wife) resided, and an explosion took place, by which the wife was injured and the husband's furniture was damaged. In an action by the plaintiffs against the district council and the contractor, the Court of Appeal in England held that the district council owed a duty to the public (including the plaintiffs) so to construct the sewer as not to injure the gas main; that they had been guilty of a breach of this duty; that, notwithstanding that they had delegated the performance of this duty to a contractor, they were responsible to the plaintiffs for the breach; and that the damages were not too remote to be recovered.

THE LAW OF LIBEL.

W. B. Odgers, Q.C., the well known English counsel, has published a work entitled, "An Outline of the Law of Libel," in which the condition of the law is pretty fully stated. One rule of law, stated by Dr. Odgers, seems to us to require looking into. It is this: "Every judicial proceeding may properly be made the subject of comment [by the press]; but only *when the trial is over*, not before No observations are permitted during its progress. . . . Any comment pending action is contempt of court." We cannot but consider that such a rule hampers the freedom of the press, and may hinder the detection of rascality. Suppose an unscrupulous but cunning promoter launches a scheme for robbing the public. Any newspaper which comments adversely on this scheme may be at once proceeded against for libel. Further comment after this has been done is contempt of court, and writs may issue against any papers which warn the public, and so the press may be muzzled until the promoter has brought his rascally plans to maturity. This done, he may and probably will, abandon the law suit, for he has meanwhile feathered his nest.

"Where did you learn French?" asked the Parisian. "From a native," proudly replied the tourist. "Ah! a native of what?"—*Philadelphia North American.*

ARNOLD'S BLUE BLACK INK

Mercantile Summary.

THE Sandwich council has granted a franchise to the Windsor, Amherstburg and Lake Erie Electric Railway.

SIX thousand two hundred and fifty barrels of oil were shipped to the various refineries from Bothwell in tanks in the month of June.

THE Windsor Street Railway has commenced operations on its loop line in Walkerville, connecting the Walkerville and Sandwich street lines.

THE Brandon *Times* states that ore taken from the Neepawa mine last week assayed $140.60 per ton. People here who hold shares in this property are confident the shares will be worth their face value.

THE Assiniboine Lumber Company, at Brandon, expect to have their logs this week and start running the mill on Monday or Tuesday. The mill will be running night and day during the season. It is lighted by electricity.

A FAST run was made on the Intercolonial Railway between Moncton and St. John last week. The distance, 89 miles, was covered in 93 minutes, including a stop of three minutes at Sussex for water. The train was a special one of three cars.

THE seal catch off the Japanese coast is officially reported to Collector Milne, of Victoria, as one of 7,807 skins taken by thirteen schooners of the B.C. fleet. The take is but a moderate one, and so far all the catches of the B.C. fleet this season only amount to a take of about one-third of last year.

A DESPATCH of Monday last from Winnipeg says that the Rainy River is higher than it has been in the last thirty-six years, and many wharves have been swept away. The Rainy River Boom Company's boom broke loose and piled up 7,000,000 feet of logs over twenty feet deep in the river.

A LARGE piece of timber arrived at the canal basin a few days ago, says the *Ottawa Journal*, consigned to Hon. Sydney Fisher, Minister of Agriculture. The plank is Douglass fir, cut in British Columbia, and is three inches thick, fifty inches wide, and sixteen feet long. The plank is a clear piece of timber, without knots or cracks.

THE incorporation of the Electrical Supply Company of Hamilton, Limited, is gazetted; capital $20,000, in $25 shares. Those incorporated are John Wesley Van Dyke, of Grimsby, manufacturer, and John Sintzel, tailor; Joseph Overholt, dentist; William Gilzean Read, merchant, and George Thomas Simpson, electrician, all of Hamilton.

THE success of the electric railway at Quebec is said to be exceeding expectations. So far, it is understood that the daily average of passengers carried by the seven cars now on the 6½ miles route so far open, has been nearly 7,000. No accidents have occurred as yet. The company and its engineer, Mr. E. A. Evans, are now rapidly pushing forward the work upon the Upper Town section.

THE building for the immense new pulp factory at Chicoutimi is rapidly progressing. The stone masonry is constructed, and work is proceeding on the brick walls, in which 300,000 bricks will be employed. Ten cars of prepared lumber have already reached the site, as well as several cars of machinery. Men are now laying the large pipe of 11½ feet in diameter. It will have a head of water of 72 feet, and will be 200 feet long.—*Quebec Chronicle.*

THREE boot and shoe failures are reported in Montreal this week. J. A. Laliberte, of the St. Henri suburbs, who had a branch business under the style of Legendre & Co., is offering 40 cents on liabilities of $6,000, assets being stated at about $4,000.——Azarie Fontaine, formerly a foreman fitter in a shoe factory, started manufacturing in a limited way two years ago. He is now offering 50 cents on liabilities of $1,500.——An assignment has been made by Ignace Gagnon, a small retailer.

R. M. FORAN, a young merchant of Inkerman, N.B., writes his creditors offering 25 cents on $3,000 of indebtedness. He shows about $1,000 of assets, and has only been in business about two years.——From Lower Brighton, N.B., is reported the embarrassment of J. F. Richardson, a farmer and sawmiller. He has been some ten years in the business, and is called a respectable man, but a poor manager. He has called a meeting of creditors, and will likely offer a compromise.

THE secretary of the Canadian Federated Mining Institute, Mr. B. T. A. Bell, has been advised that the British Columbia Association of Mining Engineers had unanimously resolved to join the federation. The institute now comprises the following representative bodies: The Mining Society of Nova Scotia, the General Mining Association of the Province of Quebec, the Ontario Mining Institute, and the British Columbia Association of Mining Engineers.

THAT was a fast run of the C.P.R. steamship, "Empress of Japan." She broke all previous records of speed by her journey from Vancouver at 10 a.m., 26th June, reaching Yokohama at 1.35 p.m., 7th July, ten days, three hours, forty-four minutes. On one day she made 441 knots. Mr. Shaughnessey says that when the "Empress" left Vancouver she was five days late, and in the first part of the passage made up three days. Now word comes that in the run from Yokohama to Hong Kong the other two days were made up, the steamer arriving at her destination on time. The distance is 1,991 miles.

A NUMBER of new elevators are being erected throughout the Province of Manitoba and the Territories, according to the Winnipeg *Free Press*. The Lake of the Woods Milling Company has already completed three, at Lauder, Whitewater and Forrest, and their men are now at work on the fourth at Elva, on the C.P.R. Souris branch. This company contemplates erecting at least as many more during the summer. The Northern Elevator Company have gangs of men at various points erecting additional buildings, and a new grain firm recently formed intend to erect ten elevators during the season, to be ready for the reception of grain in the fall. Five of the number have already been located, at Carberry, Beresford, Winkler, Sintaluta and Oak Lake.

FOR some years past a number of the people of Miscouche, Prince Edward Island, have grown tobacco on a small scale successfully. A quantity of home grown has been sent to a Charlottetown tobacconist to be experimented with. Upon this the *Maritime Merchant* comments as follows: "If the experiment proves that it can be successfully manufactured either by itself or mixed with imported stock, the culture of tobacco will be more extensively undertaken by the people who are now growing small plots of it for their own use only." While we do not, of course, know what quality of tobacco this is that the fertile and beautiful island of Prince Edward has grown, our friends in that province may be reminded that tobacco grown in the counties of Essex and Kent, Ontario, and that grown in several counties of Quebec, has long been used by cigar manufacturers with much acceptance.

Mercantile Summary.

THE Central Canada Exhibition is to be held at Ottawa, September 17th to 25th, this year.

AT a meeting of the city council of Nelson, B.C., on the 17th inst., an expenditure of $38,000 was authorized for building a sewage system and improving the waterworks, including a new twenty thousand gallon reservoir.

THE eleventh session of the Summer School of Science, the Yarmouth *Telegram* says, is held this year in Yarmouth, N.S. The attendance is the largest in the history of the school. There were 188 registered on Friday last.

BERNARD & FILS, music and piano dealers, Quebec, have assigned to the court on demand, and owe about $2,900. The concern was unfortunate before in the spring of 1896, and the senior had previously been in the dry goods trade unsuccessfully.

THE Hall mines shipped a train load of blister copper from Nelson, B.C., to England, last week. The weight was 127,371 pounds, and the value $32,577, an average value of $511 per ton. The new 200 ton blast furnace at the mines is almost ready for use

THE death last week by drowning of Fred B. Robb, second son of Alex. Robb & Sons, now the Robb Engineering Co. of Amherst, N.S., is an event which has occasioned lively sorrow. Mr. Robb, who held the position of secretary to that company, was a most estimable man, in the prime of life.

THE manager of the Foley mine in Western Ontario, Mr. J. C. Foley, informs the *Rainy Lake Journal* that the company has contracted for a sixteen power drill plant to be in operation by Oct. 1. The mine now has three power drills at work, and with this big addition will be able to open up the mine rapidly.

IN a paper on the sponges of the Atlantic coast of Canada, which has just appeared in the "Transactions of the Royal Society of Canada," Mr. Lawrence Lambe gives a catalogue with descriptions of the marine sponges hitherto obtained from the river and Gulf of St Lawrence. The list embraces thirty-one species, of which seven are new to science.

IMPROVEMENTS have been made in the grounds and buildings of the St. John Exhibition, and an excellent show is expected to be made this year. A number of large manufacturers in Quebec and Ontario will exhibit, and the New Brunswick manufacturers will not be behindhand, we may be sure. The date of the fair is from 16th to 25th September, and there will be four days racing—two each week.

THE most important country failure in the Province of Quebec for some time past is that of J. B. Boutin, general merchant at Lauzon, just reported assigned. He has been long in business, and successfully, but he has been indiscreet in helping his friends too freely, having not only loaned a large sum to Rinfret & Marcotte, wholesale smallwares, Quebec, recently failed, but also endorsed for them to the extent of $40,000, in favor of two banks, one of whom has made a demand on him. His general liabilities are put at $21,600.

MR. WEATHERSTON has sent us a little book entitled "In the Country," containing information intended for the tourist, sportsman and invalid seeking health and recreation at the numerous charming resorts on or reached by the Intercolonial Railway. Its memoranda begin with Quebec city—which used to be the ultimate goal of the tourist from the west—and go on through the various picturesque villages of the province, all the way to Dalhousie and Bathurst, N.B, and to various attractive points in Cape Breton. The last half dozen pages contain instructions about "Rod and Rifle," for down there is good country for salmon and sea trout, moose and caribou, partridge and woodcock.

WE note the following little group of Nova Scotia failures: O. W. Trenholme, who has for twelve years done a moderately general business at Grand Pre, in the "Evangeline" country, has assigned. He owes about $3,500, of which $3,000 is preferred, and the estate will be a very poor one.——Mrs. L. Gullivan, of Middleton, who has continued the business of her late husband since 1890, has also assigned. A son, who has managed of late, seems to have been prodigal of credit, it is said. She owes $4,500, of which $2,400 is preferred; assets estimated at about $3,000.—— The assignment is also reported of D. W. McDonald, who has done a small business at Lansdowne for the past two years.

A VOLUNTARY assignment has been made by F. Tremblay, for years past a general dealer at Les Eboulemens, Que. He owes $4,200 altogether in Quebec, and shows assets of $5,000. ——Goddu Freres, grocers, St. Hyacinthe, Que., reported last week as in trouble, have assigned. Liabilities, $2,400 ——Rancourt & Trudeau, of St. Johns, Que., who succeeded last spring to the dry goods business of W. Brosseau, have assigned to the court on the demand of Messrs. S. Greenshields, Son & Co., Montreal. Liabilities are calculated at $8,000 to $10,000.——Therrien & Frere, general storekeepers, Napierville, Que., recently insolvent, are making their creditors an offer of 50 cents, at three and six months.

THERE was a pretty hot fire at Wiarton on the 25th inst. Several newspaper reports state that "the heart of the business portion of the town was burned," but luckily this does not mean that the entire business section was consumed. There are one hundred business establishments in Wiarton, and only half a dozen were damaged by the fire. These were Fielding's flour and feed store, Sadlier Bros.' large dry goods store, Fisher's drug store, Davis' watchmaker's shop, Davis' tailor shop, Miller's office, Whicher's office; the Mechanics' Institute (books saved), and several others suffered a scorching. The insurance on most was small. From the top of the high hill directly behind the town or from the surface of Colpoy's Bay, the fire must have been an interesting spectacle.

THE difficulties and hindrances in the way of the dry goods dealer find illustration in the case of two Montreal concerns in that line this week. The failure is reported of F. F. & C. B. Kelley, jobbers in small wares and fancy dry goods in Montreal, they having fyled consent to assign. The firm dates from 1894, when they bought out Baker, Taylor & Haskett. The direct liabilities are figured at $21,472. Again, largely as a result of increasing departmental store competition, it is said, Laramee & Massicotte, dry goods retailers in Montreal, have been obliged to assign. They began business in 1894, with small capital, but a very fair connection, and considerable experience. They are said to owe $35,000 to $40,000, with assets nominally to the same amount.

WHOLESALE TRADE ONLY SUPPLIED

D. MORRICE, SONS & COMPANY
MONTREAL AND TORONTO

Mercantile Summary.

A valuable discovery of kaolin has been made in a swamp, near the village of Gouverneur, N.Y.

Victoria is still without telegraphic service says the *Times* of July 20th, the cable not yet having been repaired. It is now nearly a week since the break was first reported.

A severe storm some days ago did a great deal of damage to the lobster traps on the north side of Prince Edward Island, and the shore at many places was strewn with wreckage.

A new boiler and engine for the Electric Light Station has reached Summerside, P.E.I. When the dynamo and other equipments are all in position, the station will have a duplicate of the plant now in operation.

Word comes from London that the negotiations between the American Bimetallic Commission and the representatives of France and Great Britain have gone so far as to make it likely that Great Britain will agree to take part in a conference to be held in Washington in a few months.

Mr. McMicken, of the Great Northern Railway, sends us a most attractive pamphlet entitled, "Alaska; Land of Gold and Glacier." It contains maps and plans, views of fiords, of mountains, of mines, and of "cities"—Circle City among them, because within the Arctic circle, and a queer looking collection of tents and log huts it is. If people will go to Klondike, Mr. McMicken's road will take them to Puget Sound on the way thither.

Since our last issue the brothers Thompson, partners in the John Eaton company of this city, have been arrested, and two of them were brought before the police court on Monday last, charged with conspiracy to defraud creditors. Bail was given in $3,000 for each, and they are to be up for trial again in a week or two. Creditors are determined that the affairs of this concern shall be thoroughly searched into, and that those found guilty of fraud shall be punished.

On Friday morning last Mr. Ira Cornwall, the well known secretary of the St. John Board of Trade and the Tourist Association of that city, disappeared from the hotel at which he had been stopping. Search was made for him, but without success until Monday last, when his dead body was found floating in the water near the Westfield wharf. The cause of his death is a mystery. His nerves had been unstrung of late, and he had worried over business matters, but no one knows of any troubles that should have driven him to suicide, as has been hinted. Mr. Cornwall was a valuable official and had many friends. He was proud of St. John, believed in her future and worked enthusiastically for her business associations.

The Montreal Exhibition of 1897 opens on Thursday, August 18th, and continues till Saturday, August 28th. This alteration in the date of the fair, which has hitherto been September or October, was made because judged to be more convenient to exhibitors, and also with a view to securing more favorable weather. In addition to the regular range of prizes offered at this exhibition these several years past, we observe that there are two silver medals presented by the Hackney Horse Society, of London, Eng.; a silver cup for the best jumper, and a cup for the best Percheron stallion; special prizes for cattle, sheep, swine and poultry. A feature of the occasion will also be a race of messenger pigeons between Kingston and Montreal.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"
By W. H. PRESTON, (President of National Association of Credit Men.)

●●●

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

Letters patent have been issued incorporating the Mennonite Mutual Hail Insurance Company.

Arthur Young, who has been doing a drug business in Neepawa these two years, has gone to McLeod to establish a similar business there. His brother, W. Young, will continue the Neepawa branch.

While out prospecting on Lake Winnipeg a few weeks ago, says the Selkirk *Journal*, Messrs. Ward and Chapel discovered an asbestos claim which promises, if the samples are any criterion, to turn out well.

A by-law fixing the fire limits of Windsor has been passed. There will be two circles. In the inner circle all buildings must be of non-combustible material, and in the outer they will be left to the judgment of the council.

Through not having been successful in effecting a compromise with their creditors, as stated last week, the firm of W. J. Burroughes & Co., dealers in plumbers' supplies in Toronto, have assigned. W. J. B. assigned before in 1888.

A Vancouver telegram of Tuesday last says that the big run of sockeye salmon continues, and the price has dropped to three cents per fish. Many canneries have called in fishermen, being unable to handle all the fish caught.

Next week the Royal Victoria Life Insurance Co. of Montreal intends to begin the issue of policies, and the manager, Mr. David Burke, of Montreal, is ready to receive applications for local, district or general agencies in Canada.

Hamlin & Burke, dealers in hardware at Emsdale, offered their creditors a compromise last month at the rate of fifty cents on the dollar, cash, and the offer was accepted. Since then the firm have found themselves unable to carry out the arrangement and have assigned.

Four years ago T. B. Jupp was a working journeyman in a harness shop. Then he started a shop of his own in Grand Valley, but unfortunately for him gave credit indiscriminately, and now finding trade dull and collections slow, has made an assignment.

A firm of grocers in this city, McCullough & Co., have assigned. The business was owned by Mary A McCullough, wife of H. W. Mc., an insolvent.——Miss C. M. Sovereign, millinery, etc., Toronto, has assigned with assets of about $650 and debts somewhat larger.

Mr. P. D. McKinnon, assistant manager of the Ontario Life Co., who has been touring through southern Manitoba on a bicycle, arrived in Portage La Prairie on Saturday last. He found the roads very heavy the whole way through on account of the rains, but good crop prospects. Mr. McKinnon rode "a century" on Friday from Boissevain, Brandon and Carberry.

A serious fire took place in Montreal on Sunday afternoon last, which has meanwhile left 150 men without employment. This was in the eastern abattoir, and destroyed the rendering room, the beef house, and the engine house. There were half a dozen fire engines speedily on hand, but only four could work because of lack of water, the pressure being stated by a sub-chief of the brigade at only 25 lbs. to the inch. A quantity of green hides were destroyed. The property is insured for $30,000, but the loss is stated at more than twice that sum.

Minor failures in the city of Montreal for the week are as follows: Felix Balta, hotel keeper, is reported an absentee, and the court has ordered a meeting of creditors for August 6th.——D. Henripin, a fruit dealer, has assigned, owing about $2,000.——Louis Desjardins, a dry goods dealer, who compromised last February at 70 cents, has been unable to work through, and has assigned.——A baker, Tancrede Dansereau, has assigned to the court, and is said to owe $5,700.——A. Masse, a grocer, is also insolvent, with liabilities of $1,400.

In September, 1890, the husband of Mrs. Margaret Rose died in Petrolea, leaving her his stock of groceries and $1,000 life insurance. Mrs. Rose continued the business, but extended "lots" of credit, until she herself became embarrassed, and now she has made an assignment.——Jesse Hockin, who has been making and mending shoes in Woodstock for four years, has never made more than a living; assigned the other day.——Three weeks ago we stated that G. H. White, an Ingersoll druggist, had failed. Since then he has effected a compromise with creditors at the rate of 45 cents on the dollar.

A general merchant at Ayr, C. H. Gerbig, is one who must understand fully what it means to rise to a high business level and fall back again. Fifteen years ago he started as a painter, afterwards adding a line of wall paper. About six years ago, he opened in the same town with a general stock, and gradually worked up a considerable trade. He also started several branches in near-by towns, but finding them unprofitable, closed them all with the exception of one in Woodstock, which he retained. In February, 1896, his statement showed assets of $19,000 against liabilities amounting to $5,500. In the following September, he found it necessary to mortgage his stock for $6,200, and in April this year, placed another mortgage for $4,000. Now, in conclusion, to make a long story short, these mortgages have been foreclosed and the stock valued at $18,700 is offered for sale on August 3rd.

For a long time the firm of J. Backrack & Co. has conducted a business on Queen Street West, in Toronto, but Mrs. Jenny Backrack, wife of Morris Backrack, was the sole owner thereof. In December last, the business was moved to Yonge street, and since then the concern has proceeded to rush things in more ways than one. To begin with, in March this year a statement was shown to one of R. G. Dun & Co.'s representatives which showed the assets of Backrack & Co. to be $30,500, and liabilities $16,500, which left a surplus of $14,000. Of late, the shop has been the scene of much activity, and apparently good business. But it appears that purchases have been made by the firm from many different sources, and the supplies thus obtained have been slaughtered or sold at low prices. Now that the firm has assigned, and it is found that the liabilities exceed $75,000, it is reasonable to suppose that an attempt was being made to secure ready cash at whatever cost. The stock still remaining is worth about $30,000.

Having stocked up heavily with sugar some months ago, in anticipation of a tariff rise which did not come, Messrs. J. W. Lang & Co., wholesale grocers, in Toronto, have not been financially or otherwise comfortable of late. They fell behind in payments, and some days ago the Canada Sugar Refinery Co. issued a writ against them for some $2,350, and other writs have since been issued. On Tuesday last Mr. Lang took the extraordinary step of giving a bill of sale for $22,688 to his bookkeeper, Mr. Lumsden, and on that day "F. J. Lumsden & Co." became nominal proprietors of the place. But, behold! F. J. Lumsden on the same day gives T. H. Steele, of Barrie, a chattel mortgage for $22,688 over his stock, and the question now is, whose are the goods, or who are the firm? The obligations of the concern are said to exceed $200,000; Mr. Lang will not go to see his banker, and refuses to see other creditors who call, alleging that he is "unstrung"; indeed, the doors of the warehouse were locked on yesterday, and it seemed as if no one was in. Peculiar stories are afloat about Mr. Lang—but they cannot be more peculiar than his recent actions. One thing seems clear, that this sort of bill-of-sale and chattel-mortgage procedure to hide away goods from creditors, must not be allowed to succeed.

MONTREAL HARBOR.

It appears to be true, as a rule, that governments move slowly. It certainly has been true of the tortoise-like pace of the Ottawa Government in answer to suggestions, memorials, recommendations, prayers, visits and remonstrances of the commercial bodies of Montreal for several years, with respect to the improvement of the harbor of that city. Mr. Tarte has been down to look at the harbor. Again, on Tuesday last, the engineer submitted a plan, a modification of the one proposed by the Minister of Public Works, and of plan number six. This plan, we are told, contemplates three piers, as proposed by the minister, the only difference being that it looks to a separation of 300 feet, which would bring the piers somewhat closer together than suggested by the department. The Harbor Board decided that this plan should be completed, and sent to the Minister of Public Works for approval. They probably conclude, by this time, that some concession must be made to the obstinacy of—somebody, whether the Minister or his friends in the East End, and that half a loaf is better than no bread.

LACHINE ELECTRIC WORKS.

This great enterprise is at the point of completion, for it is announced that on to-morrow the water is to be let into the head race. We have on previons occasions described the extent of this undertaking, the boldness of its conception, the substantial character of the works. In addition to the "harnessing of Lachine Rapids" here done and the power utilized for lighting and heating in Montreal, the directors have an asset in the landscape which surrounds them—for landscape has value—only they are scarcely in a position just yet to transmute this value into dividends. The contractors have the right, we understand, under their charter, to operate the works for thirty days before handing them over to the Lachine Rapids Hydraulic Company. It is therefore likely that the official opening of the works will not take place until the end of August or the beginning of September. The company's first circular was issued on the 27th inst., calling attention to the cut of 20 per cent. in prices of light and power. The company solicits the public's encouragement since it is the pioneer of cheap light and power. And it promises to protect customers against any cuts in rates by other companies.

LATE RAINS AND THE CROPS.

The heavy rains of the present week in and about Toronto have not been singular. All Western Ontario, nearly, has had similar visitations. From Guelph, Collingwood, St. Catharines, as well as from Port Hope and Lindsay, Belleville and Peterboro, come accounts of heavy rains, which lasted from 24 hours to a week. Much grain, both cut and uncut, has been damaged, and the harvest has been interfered with. Wheat, oats and Indian corn have all suffered, low-lying lands having been flooded. In the fruit section of the Niagara district some damage was done to the berry crop. A despatch of 27th inst. from Winnipeg states that the water in the Red and Assiniboine Rivers at that point has risen fully three feet in the past few days, consequent upon the heavy rains to the south and west, and also around the city.

Tomlinson v. Broadsmith.—A managing partner of a business firm has, according to the English Court of Appeal, an implied authority to employ a solicitor to defend an action brought against the firm for the price of goods supplied to the firm in the ordinary course of business.

—A decision has just been promulgated by the Minister of Customs, which will have an important influence on the industry of ship repairing, especially on the Great Lakes. The regulations hitherto in effect prescribed that when a Canadian vessel had repairs done in a foreign country, duty upon the cost of such repairs should be collected upon the vessel's return to a Canadian port. The object of course was to keep this class of work for Canadian docks and workmen, especially on the Great Lakes. This has now been cancelled, the following being substituted: "Until otherwise advised Customs duties are not to be collected on ordinary repairs which go to make up the hull of a Canadian vessel, nor on repairs to the tackle or machinery thereof when made in a foreign port. This exemption from duty does not, however, apply to machinery from any country excepting the United Kingdom for use on Canadian vessels if the machinery is of a class or kind made in Canada. In the case of foreign built vessels the question of liability to duty is to be submitted to the minister.

—Prof. Gates has made the discovery that bad feeling and wickedness create harmful chemical products of the body, while goodness and benevolence create products which are healthful. "Of all the chemical products of emotions," he says, "that of guilt is the worst. If the perspiration of a person suffering from this feeling be placed in a glass bowl and exposed to contact with selenic acid, it will turn pink." Other emotions show other colors, so that if the professor's theory is correct the true character of a person can readily be ascertained by exposing his perspiration to certain chemical preparations. Candidates for public office may come to be treated that way, after which no doubt of their qualities one way or the other can possibly exist.—*New Yorh Tribune.*

TORONTO STOCK EXCHANGE.

THE SITUATION.

Neither on the political relations of the colonies to Great Britain, nor on the trade question, does any definite advance appear to have been made in the conferences between the colonial Premiers and the Secretary of State for the Colonies. The latest summary of what took place shows that little has been done beyond opening the way to future conferences, though it looks as if, for the present, no further consideration of the subjects discussed need be looked for before the return of the visitors. The task of changing the political and commercial relations of the colonies to the Mother Country is not one that can be done in a day. Colonial representation at Westminster, in any effective sense, appears to be a long way off. Mr. Chamberlain is reported to favor colonial representation in the peerage; but a distinction which may be coveted by the few would not be accepted as a representation of the mass of the colonists. Such representation is possible only in the Commons, and this does not appear to be contemplated at the colonial office. On the trade question, Mr. Chamberlain pointed to the inroads made in the colonial trade by foreign competitors; and he asked for a plan which might bring about a change. The colonial Premiers, following the lead of Sir Wilfrid Laurier, called for the denunciation of the treaties which stand in the way of a change of policy in this direction. Mr. Chamberlain, it seems, gave no assurance that this would be done. On the trade question, it looks as if the conference had come to a point where no further advance is possible. The financial plan for the sustenance of the Pacific cable scheme is still in the air.

So far as the British House of Commons is concerned, we have now heard the last of Dr. Jamieson's raid into the Transvaal. Mr. Stanhope moved censure the committee which conducted the enquiry into that fiasco. He was dissatisfied with the inconclusive character of the report; called for the punishment of Mr. Rhodes by removing his name from the membership of the Privy Council; and further, he repeated the objection on which Mr. Blake thought to justify his resignation from the committee: that the attorney of Mr. Rhodes had not been called to produce certain telegrams. The feature of the debate was the defence of the committee by Sir William Harcourt, in whom Mr. Chamberlain also found a defender. The Chancellor of the Exchequer, Sir Michael Hicks-Beach, said the Government would have to consider whether Mr. Rhodes should sit in the Privy Council; but Mr. Chamberlain, without noticing this, in effect replied that no consideration was necessary, and he gave a distinct assurance that the Government was not going to deprive Mr. Rhodes of his Privy Councillorship. The most satisfactory thing learned in the debate, and from the lips of Mr. Chamberlain, was that President Kruger is now desirous to meet the British Government in a proper spirit. Let us hope that, in future, events will move more smoothly in South Africa.

If anything could cool the ardor of enthusiasts who wish to rush to the Klondike gold diggings at once, it would be the consideration that it would be impossible to reach there before the ice king would claim the region for his own. One who has been there tells of the graves of 2,000 adventurers who have left their bones in the soil where they expected to find their fortunes. Rich as the diggings are, and they seem to be rich almost, if not quite, beyond previous experience, we have the statement of one official whose duties call him there, that the proportion of those who are conspicuously successful is only about one in ten; the rest are failures, some absolute, some comparative, and failure there means suffering in all cases, in not a few, death. The formation of companies with large nominal capital to operate there is, to say the least, untimely. For large companies there is at present no need, perhaps no room. The man who turns over the dust of the placer to get out the gold wants only the commonest implements; but he needs an iron constitution and a supply of food that will carry him through the winter and well into next summer. Associated capital will be needed when the rock is pierced. In placer mining a strong company could work to advantage if it had ample space of its own to work in; it might be able to obtain much better results and greatly to diminish failures. The time for such companies may come, but it has not come yet.

There was a time when it could be said with every appearance of truth that a row of gibbets on the coast of England would fail to frighten the smuggler from exercising his vocation; and it may with equal truth be said that nothing in the shape of cold or privation is strong enough to prevent multitudes of people rushing to Klondike at the wrong period of the year in the hope of making their fortunes in the gold fields. From the United States and from Canada, especially the former, the rush has the force of a mountain avalanche which nothing has been able to resist. It remains to be seen whether the new regulations in the form of a royalty will not tend to turn some of them back. On every claim from which $500 a week is taken the royalty of the Canadian Government will be ten per cent. on the product, and when more than $500 is taken from a claim in that time the royalty will be swelled to twenty per cent. The wisdom of this excessive exaction may well be open to doubt. There will be difficulty in collecting the royalty, and the mere fact that it is demanded must discourage mining in the Klondike region. No gold mining hitherto engaged in would have stood royalties of such large proportions. If it be decided to throw a wet blanket on the enthusiasm which is causing people to rush heedlessly to these new gold fields, the object is likely to be attained. The Government is evidently proceeding on the assumption that the riches of the Klondike surpass all experience. The known facts give color to this notion, but mining even in this new region is a lottery in which there are more blanks than prizes. When silver was discovered north of Lake Superior the Ontario Government hastened to put on a royalty of ten per cent., a proceeding which is now universally regarded as a mistake. That the Canadian Government should seek to profit by the new mines, which will cause it considerable expense in protection and communications, is reasonable, but it has overshot the mark. After a little experience it may be desirable to revise the scale of royalties.

As a precaution, the resolution of the Government to reserve one-half of the mining locations which may hereafter be found in the Klondike country is reasonable and wise. A reservation of a part of the sources of wealth which are likely to prove valuable gives time for thought. What shall we do with these reserves? It is not necessary to answer that question, at present, or even to be able to do so. If Klondike were a little farther from the frontier, we might send some of our robust criminals there, after the fashion of Russia, but with a more humane purpose and unobjectionable methods, to work in the mines. But there is at present no such scheme; if there ever comes one, the criminals would have to be segregated from the rest of the mining population, and for this purpose alternate reserves would not suit, so long as the other lots are being worked by honest people, or at least by people who have not been convicted of crime.

While making Indian corn for other purposes free, the new Canadian tariff authorized the Government to impose a duty of 7½ per cent. on corn imported to be used in distillation. On any spirits made from this corn and exported, the consumer must pay the duty. This item of the tariff has now been put into force. American, English and Scotch distillers pay no duty on the grain they use, and this Canadian duty operates as a discrimination against Canadian whiskey in foreign markets. The Canadian distillers have an advantage as against foreign distillers in their own market, but their own market is small compared with the world's market. The policy of this duty may fairly be challenged, but for the present it must be paid, with whatever result to Canadian distillers as competitors in the world's markets. Theoretically, it will be paid by the foreign consumer, but it may in fact come wholly or in part out of the distillers' margin of profit. That depends on the stress of the competition.

Besides asking for the denunciation of the treaties, in common with Canada, the Australian Premiers wanted an assurance that the British Government will consent to permit Australia to exclude certain foreigners, chiefly Chinese, and possibly Japanese. Here again British treaties block the way. Hostility to Asiatics is not a new thing with Australians; it is nearly as old and as deep-rooted as the feeling which prevented these colonies being continued as a dumping ground for British criminals sentenced to transportation. There is no probability that this feeling will decline; on the contrary, it gathers strength with time, and is destined to get its way in the end. Mr. Chamberlain did not promise assent to this wish of the Australians, and it is probable that the *vis inertia* of the Colonial Office will maintain the present arrangements as long as possible. Nevertheless, Australia is destined to be the home of Anglo-Saxons, with a very light sprinkling of Asiatics, chiefly the descendants of those who are now there.

THE LEATHER INDUSTRY.

The latest phase of tariff legislation in the United States makes interesting a review of the conditions of the leather industry in Canada. The tanners of this country have important interests at stake in any legislation which affects the leather trade of the neighboring country, in that they are competitors of the American tanners in British markets, and buy large supplies of raw material in the Western States, while the American tanners also buy hides in Canada. The export of Canadian leather is a trade of recent growth, but if it continues to develop as it has done in the past ten years will soon become of national importance. The annual value of sole and upper leather exported from this country during the last decade is as follows:

1887	$440,616
1888	299,558
1889	668,258
1890	727,087
1891	868,802
1892	1,011,673
1893	865,381
1894	1,573,034
1895	1,271,615
1896	1,907,848

Thus our exports of leather have more than trebled in ten years. The above table indicating the steady and continuous growth of an industry which is in every way natural to the resources of this country, is very gratifying to those interested in the development of Canadian industries. The increased exportation of sole leather is largely due to the fact that Canadian manufacturers of footwear are each year demanding a closer selection of leather. Spanish sole leather is made chiefly from hides imported from South America and which, by the custom of trade, must be purchased in large blocks. These hides are not selected and classified as are those of the Western States. As a result about 40 per cent. of the leather made from these hides is in no way suited to the needs of Canadian manufacturers, being too heavy, and this must be exported to those countries in which it is used. The conditions of the trade are the same in the United States. The 15 per cent. *ad valorem* duty which Congress has placed upon hides would have ruined the export interests, and with them, to a certain extent, the domestic trade of American tanners, if provision had not been made for a drawback to be given on all exports of leather made from imported hides.

In consequence of this drawback, the Canadian sole leather tanners will gain comparatively little from the tax placed upon the raw material of their United States competitors. Since the formation of the Canadian Sole Leather Tanners Association, some five years ago, vigorous efforts have been made to develop the export leather trade from this country. The tanners have united in gaining and giving to each other knowledge of the condition of the British markets, and the union here shown has contributed not a little to the growth of the industry. So marked has been the success of the Canadian tanners in foreign markets that the United States Leather Company has threatened to offer strong competition in the markets of Canada if the export trade was not placed under certain regulations which they proposed. To offset the effects of this competition the association adopted the rebate system, giving a discount of five per cent. from standard prices to buyers who confined their purchases to tanners in the association.

The effects of the Dingley Bill upon the upper leather industry are more problematic than in the case of the sole leather. This leather is made from domestic hides, and if the 15 per cent. duty has the effect of advancing hide values in the United States, as apparently it must, the exporters of the product have not the advantage of a drawback to offset their loss. Not only has a duty been placed by our neighbors upon hides, but other materials are subject to increased taxation. Degras, for instance, is taken from the free list and a duty of ½ of 1c. per lb. imposed. The duty on tallow, formerly free, will be ¾ of 1c. per lb. Sumac formerly paid 10 per cent; the rate is now 3-10c. per lb.—an increase of about 50 per cent. Extracts of quebracho and of hemlock bark are changed from 10 per cent. *ad valorem* to ½ cent per lb.; extracts of sumac from 10 per cent. to ⅝ of 1 cent per lb. These duties give to the Canadian tanner a distinct advantage in the manufacture of upper leather for the export trade.

The natural tendency of the duty will be to limit the exports of hides from Canada to the United States, which during the past five years have been in value as follows:

1892	$493,143
1893	453,322
1894	294,125
1895	946,820
1896	1,121,938

If the Dingley bill accomplishes its purpose, Canadian butchers will be compelled to market their hides in Canada, to the advantage of Canadian tanners. Considerable quantities of packer hides have hitherto been imported from the Western States, and for these the Canadian tanners, in common with the United States tanners, must pay higher prices if they cannot find substitutes at home or in other countries.

NOVA SCOTIA MANUFACTURES.

A business-like suggestion with respect to the nature of the coming Nova Scotia Exhibition, is made by the Halifax *Chronicle*. That journal mentions the not very creditable fact that at former Nova Scotian exhibitions "the products of our large manufacturing industries—cotton mills, sugar refineries, iron smelters, steel works and others—were conspicuous by their absence; and this gave rise to comments not very complimentary to the management of those industries." Whether the reason given for their declining to exhibit is the true one—namely, that they were entrenched behind tariff walls so high that they feared no competition, and therefore felt no need of exhibiting—we cannot say. But it may be pointed out that manufacturers in other Provinces were not kept by such considerations from making handsome displays at the exhibitions of Western cities. Their attitude was, for the most part, one of pride in the industrial development of the country; and they felt that they could not, in justice to themselves, refuse to contribute their quota to what was expected to be a display of the resources and products of the Province or city in which their factories were situated. Then the further idea had weight, that such exhibitions are valuable in advertising manufactured goods. It is, we believe, perfectly true that a good display of the products of Nova Scotia manufactories would prove a useful object lesson as well as an advertisement. For the sake of their chief city, for the sake of the exhibition which bears the name of the Province—one of the richest and proudest in Canada—Nova Scotian manufacturers should put forward their best efforts to have the industries of the Province adequately represented on the occasion.

PACIFIC COAST LUMBER.

It is not too much to say that depression and dulness exist in the lumber trade all over America, except possibly in our maritime provinces, and certainly the lumbermen of British Columbia seem to share in the prevalent depression in that staple. While the local trade seem to fully maintain prices, says a recent letter from Vancouver, the competition in the export lumber trade has become very severe. Shippers who are not strong financially have been compelled to realize upon their cut, and in some instances prices have been forced below the cost of production. As an example of this pressure to reduce prices, a very large quantity of railway ties or sleepers, eight feet long, for Japanese railway use, are contracted for, and a portion of them have already been shipped to Taku River, Japan, free on board, at the rate of $5.50 per thousand feet. A year ago the price of such ties was $8. We are told that a Montreal party is negotiating for three million feet of Pacific coast lumber, and it looks at present as if a Tacoma firm, in Tacoma, State of Washington, would be the successful tenderers for it instead of a Canadian. Cedar shingles, it may be noted, are stiffening in price. Nearly all the mills in B. C. are several car loads behind in their orders for these. We know of one firm which has thirty car loads on their order books and find it impossible to fill them for some time to come.

MANITOBA'S RAILWAYS.

It was stated the other day by an English journal, in the course of an article in praise of North-Western Canada, that the Province of Manitoba, scarce a quarter century old, boasted "almost a thousand miles of railway." The English writer was well within the truth in his statement. Our "Prairie Province," as Manitoba is called, has much more than a thousand miles of railway; it has 1,571 miles in operation, and we find a list of the roads in the valuable pamphlet entitled "A Few Facts," compiled the other day under the authority of the Honorable the Minister of the Interior.

The Canadian Pacific Railway has 309 miles of its main line in the Province, and has 704 miles of branch railways. These branches are nine in number, the principal being that from Winnipeg to Manitou, near the American boundary, 100 miles; from Emerson to Winnipeg Junction, 64 miles; from Kemnay to Estevan, 81 miles; from Glenboro to Souris, 45½ miles. The C.P.R. also leases and operates the Manitoba Southern Colonization Railway, which has 217 miles of track; the Northern Pacific, an American road extended into the Province, has no less than 265 miles of track therein; the Manitoba and North-Western has 193 miles; the Great North-West Central and the Winnipeg Great Northern have between forty and fifty miles each.

SHARING COMMISSIONS.

If a wholesale merchant found his clerk selling goods at less than the marked price, and learned that his clerk had been coaxed or induced to so sell them by Mr. A.B.C. or Mr. X.Y.Z., who were insurance men, what a towering rage he would be in. "These scoundrels are corrupting my clerks," he would say, "and a dishonorable business it is."

Quite true; it is a dishonorable business. The same merchant does not, however, regard it dishonorable to induce insurance canvassers to share their commission with him, in order that he may get his fire insurance done a trifle cheaper. Is there any difference in the moral aspect of the two transactions? The rich merchant who makes a few dollars by getting the poor insurance canvasser to reduce his commission makes these dollars at the expense of the canvasser's pocket (for his income is lessened), and at the expense of the canvasser's conscience (for he must break his solemn agreement with his company.)

Some insurance canvassers there are who will not share their commissions in the way described—all honor to them. But the pressure to do so is often dangerously strong, the more shame to the manufacturer or merchant who influences them against their financial interest. It is mean for any business man who has not the pluck to quarrel boldly with a fire insurance company, or with the body of underwriters, respecting what he may regard as high rates of premium, to descend to the petty policy of bleeding canvassers by sharing their commissions. It does not reduce the rates, but it does reduce the reputation of the man, or the firm, or the company caught at such disreputable tricks.

CANADIAN STEAM FIRE ENGINES.

Several communications have come to us from different places in Canada within the week, referring to competition between foreign steam fire engines offered to Canadian municipalities, and like machines produced in the Dominion similarly offered. One of these letters we print. We had supposed, when we learned that both Montreal and Ottawa councils had decided in favor of the Lafrance engine, made in the United States, that it must have answered the required tests better than the others. But the letter of Mr. Parsons asserts that the Ronald engine can beat the Lafrance foreign engine, and was offered one-half cheaper, and yet the Lafrance was preferred without a competitive test. This is the sort of thing that gives color to allegations of "boodle"; and assuredly ten members would not have resigned, as they did the other day from the Ottawa council by way of challenge to the remaining members, unless there were some reason to believe that the majority had been improperly approached.

On Tuesday last a public meeting was called to discuss that matter, and the Ottawa city hall was crowded, and lasted till near midnight, many more being unable to get in. Those aldermen who resigned, and those who did not, were all accorded a hearing. After Mayor Bingham had made an explanation of his action or want of action in the matter, a resolution was put and carried by a show of hands of about ten to one, approving the conduct of the aldermen who have resigned. A second motion condemning the mayor was put, and there was about the same show of hands. This much was secured by the public meeting, namely, a statement by the mayor that he had not yet signed the contract, and that if Ald. Black or any other would file an affidavit of belief that there had been wrongdoing in connection with the letting of the contract for the two Lafrance engines, he (the mayor) would not sign the contract, but would call for new tenders. So that if promise of this contract were really obtained by the nefarious means supposed, it is not likely to be carried out.

ASSESSMENT INSURANCE INADEQUATE.

We have had, within the week, a further instance of hardship suffered by a policy-holder in the Massachusetts Benefit Life Association, who for a dozen years has been paying calls, and now, when poorer in pocket and weaker in health than ever, unable to get life insurance in regular companies, he must submit to pay heavier assessments than ever, or lose all he has paid. From the comments of half a dozen American insurance journals on the position of this company, we select the following from the *N. Y. Spectator*:

"The fundamental trouble with the Massachusetts Benefit Life is found in the cowardice of the old management in not having the courage of their convictions and daring to raise the rates of insurance to correspond with the advancing age of the members. It was long since made evident that it was financially impossible to carry a man to age sixty at the same rate that he paid when he was thirty. The laws of mortality are opposed to such idea, yet many of the original assessment associations attempted to do this, but such as have not failed have been forced to yield to the inevitable and adjust their premium rates according to age. The managers of the Massachusetts Benefit knew the necessity for so doing, but put off the evil day as long as possible, until finally when they did attempt to advance rates they were opposed by policy-holders and the flood of criticism and scandal was let loose. The history of this once prominent and successful association should be heeded by every manager of an organization of this kind—if they do not collect premiums adequate to the risks assumed they will inevitably go to the wall."

The latest about the Massachusetts Mutual Benefit Life is that a meeting of some 300 of its policy-holders was held in New York on Tuesday last, at which the president of the company, Mr. John H. Rolker, was present. Many at the meeting were incensed, and used hard words such as "fraud" and "swindle" to describe the association. The policy-holders finally decided to refuse to pay any more assessments into the company, and empowered a committee chosen at last week's meeting to make arrangements to transfer as many of the 10,000 policy-holders as are willing into some old-established New York company. Further, it was agreed to assess each policy-holder one-tenth of one per cent. of the face value of each policy for the expense of enrollment and transfer.

In connection with this matter we see it stated that a lawsuit comes on for trial on September 20th under the following circumstances: Elizabeth Biggar and J. C. Biggar, of Oakville, have brought action against the Massachusetts Benefit Assurance Company because, they say, the company increased the premiums on their policies in an unwarranted manner, and moreover actually refused to accept a premium legally tendered.

THE WINNIPEG INDUSTRIAL FAIR.

HOW IT STRIKES AN EASTERN MAN.

You will hardly expect me to write about anything at present but the Winnipeg Fair, for that is a subject that overtops everything else. I confess I was surprised, and I think you would have been, at the preparations made for this event and at the extent of the whole thing. These Winnipeg people are workers, and they must have put a mighty lot of work into this exhibition. The people of the province take a pride in it and have shown their pride, not only by their exhibits, but by the way they poured into the city. The hotels, I am told, were all full on Sunday night last, and many hundreds of private houses have had guests in them. Winnipeg was particularly full on American Day.

It seems that this year the fair took a wider range of objects on exhibition and greater efforts were made to get animals and articles from a distance. They succeeded in getting minerals from the Kootenays, of British Columbia, as well as from the Rainy River and Rat Portage country of Ontario, and both were "drawing cards." The extent of the live stock shown was astonishing. Of its quality I am no judge, but am told that many of the animals could not be surpassed. They certainly were handsome. The programme of games, races and amusements was an elaborate one, and the pyrotechnic display of the siege of Algiers was brilliant. The cinematograph was also at work. Pity it was that the pouring rain on one or two days interfered so greatly with the whole affair. It is not the first time that this exhibition has suffered in this way, but this one has been a great success for all that. They have a dairy building here and it was full, both creameries and cheese factories in the province and the territories showing the great advance made in the production of both cheese and butter. Some butter was exhibited by a farmer from Iowa.

As an instance of the spirit shown by some Manitobans, and the scale they do things on, I may mention that the firm of Fraser & Sons, of Emerson, sent to this fair no less than twenty head of cattle, eighteen sheep, twenty-four pigs, a stallion, with several mares and foals. One man at Clearwater sent thirty pure-bred Oxford Down sheep, another at Brandon, twenty Shropshires. Horses too, Clydesdale and carriage, were in creditable number. One man exhibits ten, others from two to six each.

What I may call the industrial display in the main building was, I hear, greater and better than former years. Cigars were being made on the spot. G. F. & J. Galt had an exhibit of tea, served by young ladies. There were some nice displays of furniture. Cured meats were shown by Griffin; aerated waters and malt liquors by Drewry. Other local firms exhibited shoes, moccasins, leather, harness, etc., others carpets and house furnishings, and still others cereal productions, heating apparatus, soap, etc. The industrial school at Qu'Appelle showed felt and felt shoes. The Hudson's Bay Co.'s exhibit was a striking one, showing a Cingalese interior with plants, birds and bric-a-brac therein.

Among exhibitors from Ontario, the McClary Manufacturing Company, of London, made an extensive display of hollow-ware and enamelled-ware. There was stone and earthenware from Belleville and Hamilton, cane goods and metal goods from Hamilton. The Massey-Harris Company showed a large line of their make of bicycles. I also saw an exhibit of woolens from the Nova Scotia Woolen Co. Pianos of Toronto make were also displayed.

Naturally, agricultural implements form an interesting feature of such a fair as this in an agricultural province. Power was furnished in machinery hall to drive a number of the machines shown. There were American reapers and binders as well as Canadian; Michigan and Illinois competing with Ontario. The Waterous Engine Works had on view several of their steam fire engines, some field implements and a steel road grader. Ploughs, windmills, wagons and other things belonging to the farm were in moderate profusion. The Chatham wagon was much "in evidence."

There is no use disguising the fact that Tuesday's rain was a dreadful "black eye" to the fair. With cheerful optimism, however, the people and the newspapers took what comfort they could out of the great benefit the rain would be to the crops, and the people went diligently shopping through the city. There was a good deal of mud everywhere and it interfered with the later horse races at the exhibition grounds. But the siege and the platform performances attracted great crowds. On Friday there were said to be three thousand Americans present, principally from Dakota, and it is proposed to have an "American Day" at every fair hereafter. A striking sight was the parade of the live stock, which lasted almost an hour, and was probably the greatest thing of all.

The railways were taxed to their utmost to handle the streams of people that crowded them, but there seemed to be but little disappointment. A lot of the Americans remained over in the city till Sunday. Liberal arrangements were made by the roads with respect to stop-over tickets, and one could not but remark the good humor that generally prevailed.

Whether one looks at it as a spectacle, an advertisement, or an object lesson of the capabilities of the Great West, there can be no doubt of the value and success of the Western Industrial Exhibition. And it would not be easy to praise too highly the enterprise of its management.

TRAVELLER.

Winnipeg, Manitoba, 25th July, 1897.

BRITISH COLUMBIA MATTERS.

A letter from Victoria, B.C., to THE MONETARY TIMES, bearing date 20th instant, gives some particulars that may be interesting. Much inconvenience was being felt by reason of a break in the cable connection with Vancouver, which had prevented communication by telegraph for five days. Our correspondent says:

"The arrival of a steamer from Japan and China is quite an event here, and I went down to witness it. It was the "Empress of India" that arrived this morning, and she carried no less than 375 Chinese passengers—every one of whom was given a berth, and had his baggage fumigated. There were 50 of these Chinese for this city, they told us, 50 for Vancouver, and 50 for points on Puget Sound. And there were several white missionaries, with their wives, returning from mission work among the Mongols across the Pacific. The cargo of the steamer, 900 tons, was composed mostly of general freight, a large share of it for this city. I was told there was also more than 100 tons of silk, most of which, of course, goes forward to eastern United States and Canadian cities.

"It may interest somebody among you to hear that a good sprinkling of the Christian Endeavorers, who held their big convention in San Francisco, have reached this far north. A steamer brought 120 of them here as excursionists, and I have seen them all about the city and the harbor, enjoying this lovely air and seeing Canada, as they call it.

"People are talking very wildly here about the gold fields of the Yukon district. Being so much nearer, one would expect Victoria people to be very wary and well up in the difficulties and dangers of that remote spot. But, only fancy, one of the city newspapers, to-day, has a heading, 'Kootenay is a back number now.' And it goes on to tell that 'so say the passenger agents of the railways running into that district.' Further we read: 'Up to two weeks ago traffic Kootenayward was brisk, but since the Klondyke fever struck town hardly a ticket has been sold. The agents are now kept busy answering questions about Alaska, and bemoaning the fact that their roads do not extend into, or at least towards, that favored country. Everybody who wants a change now talks of Klondyke.' A steamer, the 'Islander' of the C.P.N. Co., is to sail from here to Dyen direct, I am told, on Wednesday of next week. The Pacific Company has an extra steamer on the route, the 'Mexico,' and the steamer 'City of Seattle' is to be put on the route by the Northern Pacific."

BANKERS' REGATTA AT HALIFAX.

Bankers and other visitors to Halifax on the occasion of the meeting of the Canadian Bankers' Association in that city in 1894 will not soon forget the excitement of the naval review and regatta in the harbor, in July that year. This year again there was a Bankers' Regatta, and last Saturday was the day, but it was held on the North-West Arm, and it was made more—or less, according to the point of view—interesting by a tantalizing fog, which shut out the view of the events at one time, and made them look like a kaleidoscope at another.

The scene was otherwise a most delightful one. Her Majesty's war ships "Crescent," "Talbot" and "Pallas" were in the harbor, and had their peace paint on. There were steamers and yachts, launches and dingies, whale boats and skiffs, barges and shells, bands of music, flags, and jollity generally. First there was a rowing race, open to the navy only, and eight boats started; there was a race for four-oared boats, a single scull race, and a canoe race. Notably, there was a double scull race, participated in by bank men, and a single scull race, also for bank men. This last was won by Turnbull, of the Halifax Banking Company, with his chum, DeMille, second. The aforesaid Banking Company people evidently live near the harbor, for it was two of the staff of that bank, Turnbull and DeMille, who won the double scull race. Messrs. Clark and McKay, of the Merchants Bank of Halifax, came in second; Bailey and Irving, of the People's Bank of Halifax, third.

It is usual, in writing such descriptions, to mention the names of the officials of the course; very important persons they are, too, for how could a race be properly run without starters, time-keepers and judges? And, of course, they were on this occasion good men and true. I have only to name them to convince you of that. The referee was John Lithgow; the starter, John Knight; the time-keeper, Geoffrey Morrow. The clerks of course were Lieut. Hayhurst, of the Royal Navy and D. R. Clarke; the judges—without the ermine, but worthy of it—were: J. Norwood Duffus, H. C. McLeod, Com. Hughes-Hughes, R.N.; H. N. Wallace.

CABLE TELEGRAPHY.

Many business men who have never had occasion to use the telegraph cables either across the Atlantic or any other ocean, would be astonished at the aggregate of money that is paid by commercial and financial institutions and the press for cable messages and despatches. Instead of charging so much for a ten-word message, as the land wire companies do, the cable companies charge so much per word and the figures are much higher. To "cable" a message from New York or Montreal or Toronto or Halifax to England, France or Germany, costs 25 cents per word, and from Chicago 31 cents per word. The rates to the United Kingdom from places in New Brunswick, Nova Scotia, Quebec or Ontario are 25 cents per word, but from British Columbia, Manitoba or the North-West Territories the charge by the Western Union Telegraph is 37 cents per word. In the States the charge for cable messages per word varies in different States, reaching 31 cents in Michigan and Illinois, 37 cents in California, 40 cents at Key West, Florida.

The cable rate from Eastern Canada to Belgium is 30 cents per word, to Switzerland also 30 cents; to Holland and Italy, 32 cents; to Austria, 34 cents; to Denmark, 35 cents; to Greece, 38 cents; to Sweden, 39 cents; to Turkey, 37 to 53 cents; Russia in Europe, 43 cents.

The war in Cuba, of course, increased the volume of telegraphic business in the West Indies. The rate from Canada is 45 cents per word for cable messages to Havana. Other Cuban points are higher, and no towns in the West Indies outside of Cuba can be reached for less than $1 per word. Messages to Porto Rico cost $1.90. The tariff on messages to the island of Jamaica is $1.19 per word; to Barbadoes the cost is $1.69. Central American rates range from 50 cents (Guatamala) to 75 cents (Costa Rica and Nicaragua). But as you go farther south rates take a big jump upward. Messages to Brazil cost from $1.35 to $1.87 per word; British Guiana, $2.10.

It is an expensive undertaking to communicate by cable with Australia. A dollar and a-half to two and a-half is the cost per word. Queensland reaches the highest figure, $2.52 per word, while South and West Australia rates are $1.40. Messages to China and Corea cost $2 per word. To Japan the rates are $2.27 per word. To India, $1.20; Madagascar, $1.70; New Zealand, $1.58; Philippine Islands, $2.51; Siam, $1.51. African rates are lowest for points along the Mediterranean and highest along the west coast. Algeria can be reached for 38 cents per word, the minimum rate for that continent. East African rates are $1.54 and $1.64, while South African rates are higher.

BLISTER COPPER TO SWANSEA.

An interesting paragraph about the product of the Hall Mines, near Nelson, B.C., appears in a recent issue of the Victoria *Province*. It mentions a notable event in the history of British Columbia mining, namely, the sending by the Hall Mines of a train load of blister copper to Swansea, Wales. "Hitherto our matte has been sent away containing something under 50 per cent. of copper. Now the company has its own refinery in working order, by which the matte is first reduced to white metal containing about seventy-eight per cent. pure metal, and then finally is turned out as blister copper, containing ninety-eight per cent. of metal. Besides the copper itself, which is worth some $200 a ton, there is a considerable quantity of gold and silver in the product which brings its value very nearly up to five figures. At Swansea this material is submitted to the electrolytic process, by which the precious metals are extracted and the copper is left in a marketable form." The paragraph goes on to say that the company's plant is now complete, the new big furnace being finished and shortly to be blown in; the new double track tunnel at the mine is in working order; the tramway is bringing down 200 tons a day with ease. The shareholders, adds the *Province*, have the satisfaction of knowing that they have the best equipped mine in the country, and that the works, the value of which exceeds their paid up capital, are all paid for. They might, of course, have been enjoying dividends for the last twelve months, but if they had they would still be paying large sums for freight on country rock to distant smelters.

DISTINGUISHED VISITORS.

A correspondent in Montreal told us last week of the probable advent in Montreal, and other Canadian cities, of Prince Arisugawa, the special envoy from Japan at the Jubilee celebration in London. Baron Rosen, the newly appointed Russian minister to the Japanese Empire, came to Canada about the same time, and is booked to sail for the Flowery Kingdom per steamship "Empress of India," on August 2nd. The Prince reached Montreal on Tuesday, coming out via New York. We told our readers last week of the advent of Mr. Masana Maida as a special to Canada from Japan. This gentleman, who is to be in Toronto this week, is distinguished in his own country as the head of the Business Men's Association, or "Goni Kai," of Tokio; is ex-minister of agriculture for the Empire, and a member of the Upper House. We should see, therefore, that in the interest of Canada-Japan trade, such distinguished visitors who naturally visit Montreal should come to the capital of Ontario and receive the best impression that intelligent hospitality can bestow.

Three other Japanese gentlemen arrived recently in Canada from the United States. These are Messrs. Juemon Ohara, member of the House of Commons in the Imperial Diet; Shiroji Mitsuhashi, president of the Shizuoka Prefecterel Assembly, president of the Thirty-fifth National Bank, Shizuoka and Tokenosuke Furuya. The two former special commissioners of the Japan Tea Traders' Association, and the last named represents the same association in New York city. All three were introduced on Change in Montreal a day or two ago, and we trust will visit Toronto. Our readers were told the other day what the enterprising Japanese Empire is doing in the way of placing depots for the sale of Japan teas in different cities. The object of the visit of Messrs. Mitsuhashi and Ohara to the States and Canada is to obtain such information regarding the tea trade as may enable better commercial relations in that line to be established between these countries and Japan. Both are tea planters; one is a stockholder in the Japan Tea Exporting Company, limited, Kobe, and the other a stockholder in the Japan Tea Firing Company, of Yokohama.

PEOPLE WHO SHOULD BE SAT UPON.

It is time that some joint agreement was entered into by Canadian merchants and manufacturers to punish men who buy goods on credit, make default in payment, and then coolly give a preference to some relative or some favorite creditor, leaving a moiety or a quarter of their estate to be divided among the body of creditors. There is no more exasperating proceeding than this. One will endure with better temper to be robbed by a sleek hypocrite who gets goods by false pretences, sells them and puts the money in his pocket, or in some safe place. We have heard merchants say they would rather be swindled by an absconding debtor than be tantalized by learning from the lips of a sleek rascal that "he had given his stock to a man who had befriended him, and was sorry there was so little left for creditors."

A New Brunswick failure, the circumstances of which are creating adverse comment in Montreal, is that of Mr. T. M. Fraser, of Lower Southampton. He sold out his stock of general merchandise several weeks ago to one H. S. Savage, and has communicated with his creditors, through his lawyer, stating that he is insolvent; that he has no assets but his book debts, and offers creditors 33⅓ cents on their claims. The latter would, naturally, like to know what has become of the proceeds of stock sale. This style of failure has become too frequent of late, and as an irate Montreal creditor puts it, "these cases where an insolvent comes before his creditors with an innocent smile and a few book debts, and asks a compromise, must be sat upon."

THE BRITISH EMPIRE.

A list of the possessions of Britain's Queen is given as under, together with their area and population. The figures are mainly those of the census of 1891. It will be seen from this list of territory that the British Empire is pretty well scattered over the world. The number of square miles it covers is close upon eleven millions and the population exceeds three hundred and forty-five millions:

	Sq. Miles.	Population.
The United Kingdom	121,481	37,740,285
America—		
Newfoundland	160,200	202,100
Dominion of Canada	3,446,383	4,832,679
The Bermudas	19	15,013
British Honduras	7,552	31,471
British Guiana	109,000	278,328
The Falkland Islands	7,500	1,789
The West Indies—		
Jamaica	4,451	639,491
The Bahamas	4,466	47,565
The Leeward Islands	704	126,410
The Windward Islands	508	135,876
Barbadoes	166	182,322
Trinidad and Tobago	1,868	218,621
Mediterranean—		
Gibraltar	2	25,755
Malta	177	117,225
Africa—		
The Gambia	69	14,266
Sierra Leone	4,000	74,835
Gold Coast	39,060	1,500,000
Lagos	1,071	107,000
Ascension	34	166
St. Helena	47	3,877
Cape of Good Hope	221,311	1,527,224
Basutoland	10,293	218,902
British Bechuanaland	51,000	60,376
Natal	20,461	543,913
Zululand	8,900	142,038
Mauritius (6)	705	371,655
Asia—		
India	1,553,925	287,289,783
Ceylon	25,365	3,008,465
The Straits Settlements	1,542	509,700
Hong Kong	29	221,441
Labuan	30	5,853
Australia—		
New South Wales	309,175	1,132,234
Victoria	87,884	1,140,405
South Australia	903,425	320,431
Queensland	668,224	393,718
West Australia	975,920	49,782
Tasmania	26,375	146,657
New Zealand	104,235	668,651
Fiji	7,740	125,402
New Guinea	88,000	300,000
Protectorates and other spheres of British influence—		
Cyprus	3,584	209,286
The Niger Coast Protectorate	500,000	......
Bechuanaland Protectorate	386,000	12,726
Territories of B.S.A.	500,000	......
Territories of the East Africa Company, Zanzibar and Somali Protectorate	441,700	......
Protected Malay States	23,411	418,866
British North Borneo	31,000	200,000
Sarawak	41,000	300,000
Total	10,899,992	345,612,582

GOD SAVE THE QUEEN.

RECENT INVENTIONS.

A week's Canadian patents are published below. They have been secured through the agency of Marion & Marion, 185 St. James street, Montreal:

The first is No. 56,493, J. E. Kennedy, city, rubber soled leather shoe; 56,508, James Bouthiller, et al., Little Glace Bay, N.S., improvement in envelopes, which cannot be opened without detection; 56,535, Menno Shoemaker, Brotherston, Ont., hand power bicycle; 56,554, Absolon W. Steeves, Gagetown, N.B., machine for distributing paris green and plaster on potato plants; 56,555, E. A. Harris, E. J. Fyras, Victoria, B.C., a vignetting apparatus, a very ingenious device; 56,564, Thomas Kipling, Victoria, B.C., automatic rocking cradle; 56,571, M. G. Forstall, Winnipeg, water closet; 56,594, Louis Barceloux, Stanbridge Station, P.Q., reel or spindle.

The United States Government has this week granted patents to the following Canadian inventors: 586,112, Onesimo C. Beloin, Riverside, L.I., folding table; 586,114, Charles Boyer, Indianapolis, Ind., attachment for mowing machine; 586,157, William P. Boisvert, Point Levis, P.Q., ruler; 586,570, William Fairbairn, Gainbogie, P.Q., envelope opener; 586,186, Douglas Hewitt, Toronto, lead pencil; 586,265, Abraham A. Bourgeois, Long Meadow, Man., mechanical strokes for furnace; 586,341, Albert B. Maquire, Stratford, P.Q., stepladder; 586,361, Gustave Bourquin, Merchantville, N.S., knife sharpener and burnisher; 586,404, Charles E. Fyler, et al., Dempster, P.Q., bristle washing machine; 586,491, Robert A. Hartley, Brantford, P.Q., whip socket.

NORTH BRITISH AND MERCANTILE.

The facts and figures of the North British and Mercantile Insurance Company for the year 1896 have already been mentioned, but it is observed by the London *Insurance Spectator* that the report of the company does not give comparisons or percentages. These the journal named proceeds to supply. In the fire account the report gives the premium income of the year as £1,463,435 net, whilst the corresponding figure for 1895 was £1,478,414. No explanation is offered for this reduction of income, but it is apparent that it is not needed. Profit only is to be considered. The business has been carefully considered and reconsidered, and pruning has been done. Whereas the previous year's business left a profit of £114,233, out of the very slightly smaller income, 1896 shows a profit of £187,130, or say $935,000—very handsome figures.

When the directors were dealing last year with the quinquennial valuation report of the life department, they gave the figures of the fire premiums and losses of that period. The result was to show that the average of losses in the fire department during the five years was 63 5 per cent. of the premium income. For the year 1896 the ratio works out at 54.39 per cent.—a figure lower than that of any single year of the last nine.

The life business of the North British looks well, too, and although the directors are not given to boasting they do allow themselves to say that, both gross and net, it represents the largest ordinary new business ever completed by the company in any one year. Policies to the amount of £1,693,738 were issued at the company's own risk, and the new premiums thereon amounted to £63,830. The income of the life department alone now closely approximates to a million sterling. The claims which arose during the year were again light, and in amount did not equal those of the previous year, the actual figures being £532,671, against £579,169. As a result there has been the considerable addition of two hundred and eighty-eight thousand pounds to the life assurance fund, which now stands at £7,136,311, thirty-five and a-half millions of dollars! The North British very sensibly keeps the accounts of its three departments quite distinct, and also their investments.

PROVIDENT SAVINGS LIFE ASSURANCE SOCIETY.

A little stir was caused in certain New York circles last week over a published statement that the heirs of the late Frank R. Hadley, of New Bedford, Mass., had brought an action against the president of the Provident Savings Life Society and others for an accounting and a change in the management. The complaint was served on the Continental Trust Company, the holder of 1,025 shares of stock of the society, valued at $300,000, collateral for a note of $200,000 made and executed by the other defendants. This note has fallen due. Mr. Scott, the president, says " the charges are absolutely false. The administrators of the estate have set up a claim in equity of the stock which the company does not recognize, notwithstanding proffers of settlement. The action which it is alleged they have now taken is brought, in my opinion, with a view of influencing the company to take cognizance of their alleged claims.

" The late Frank R. Hadley was reputed to be a man of wealth, of the highest standing, socially and financially. It is true he secured a loan of $200,000 from the financial institution referred to. It is also true that the loan was renewed, without question, as I understand, all of which evidences the value of the security and the general standing of this society." The action taken, he adds, will in no wise affect the status of the Provident Savings Life; but in view of their evident intention to injure it, Mr. Scott took occasion some time ago to ask the New York Insurance Department to investigate the affairs of the society. The result of the examination, he is quite confident, will prove the allegations which have been made as unfounded, false and malicious. Advices of yesterday state that the president has bought the stock in question.

FIRE INSURANCE ITEMS.

The city collector of Chicago has collected $40,000 in insurance taxes and expects to get $60,000. If he does this, about $50,000 of the amount collected will be used for the construction of a new steel fire boat.

The annual convention of fire chiefs of the United States and Canada is to be held this year in New Haven, Conn., the sessions opening on August 17th, and closing on the 20th. It is probable that Chief Benoit, of Montreal, as well as Ald. Stevenson, chairman of the Fire Committee of that city, will attend the convention. Chief Graham, of Toronto, has not as yet, we believe, arranged to go.

The *Chronicle Fire Tables* give, in their latest issue, an annual account of increased ignitions and decreased combustion in the United States. For 1896 these tables show a national property fire loss of $118,737,420, attended with an insured loss of $73,903,800. Taking the fire insurance in force in 1896 in the United States as approximately $22,000,000,000, there was a loss in the year of about 33 cents per $100 insured; probably the lowest annual issued loss ratio that has ever taken place in the country.—*American Exchange.*

The Chicago *Inter-Ocean* relates the following story: "A good one is known to a select few concerning a local agent at Milwaukee who holds a notary's commission. One of his customers, a not unworthy descendant of Abraham, had a small loss, which was satisfactorily adjusted and the proof of loss duly signed and sworn to before the local agent, who in the press of work neglected for the time to affix his signature as notary. Later in the day the somewhat airy special agent of the company called, and the matter was explained and he was shown the proof. "This is all right," said the special, "but where's your jurat?" "He's my friend," said the local, crushingly.

LIFE ASSURANCE MATTERS.

An insurance agent wrote last month to his company, on the death of a prominent Indiana newspaper editor, aged 44: "Charles Gwynn, the editor of whose recent death you wrote me, had promised that he would insure soon. He continued in his 'putting off' in spite of my most persistent efforts. It surely is an argument of the strongest sort in favor of wise action TO-DAY."

We speak of hard times, dull times, unfavorable times, and so on, says the *Insurance Age*, but we ourselves make the "times." An illustration is given thus: The man who has just placed a policy for $50,000, and secured the premium, is of the opinion that "things are looking up;" while the agent who sits in his office, waiting for risks to come to him, is constantly exclaiming against the hard times.

The United States Industrial Co. of New Jersey, has been in the field for nearly nine years, and has built up a pretty large business, but finds it hard to realize a sufficient margin between income and expenditure to pay for the use of the capital employed. So the company recently decided to abandon the field and reinsure its business with the Metropolitan. By this arrangement. the latter adds largely to its agency force, gets about $14,000,000 of additional insurance, and removes an active competitor from five States.

Another assessment life company in the United States finds the error of its ways. This is the Royal League, concerning which the New York *Evening Post* announces that it has adopted the level-premium system of life insurance, and is intending to create a reserve fund. This association, like others of its kind, did a prosperous business in the beginning, but its fate was predestined. It used to charge members $1.34 eight times year, or $10.72 per year for $4,000, an absurdly low rate. Now the Supreme Council proposes to assess $2.72 *every month* for $3,000, which is $32 64 per annum—a very different story.

In a recent issue of the *British Medical Journal* attention is drawn to the difference in favor of abstaining lives over those of non-abstainers as shown by the yearly returns of the United Kingdom Temperance Insurance Company for a quarter of a century. During last year, in the non-abstaining section, the actual death claims were 356, which was 46 fewer than the expectancy. In the temperance section, the actual death claims were 246, or 118 fewer than the expectancy. In other words, if the death-rate of the abstainers had been the same as of the non-abstainers, instead of two hundred and forty-six there would have been three hundred and twenty deaths, or seventy-four more. While if the death-rate of non-abstainers had been the same as of the abstainers, there would have been eighty-four fewer deaths.

We usually hear of France as a country of melancholy prospects in the matter of future population, because the birth rate is lower than the death rate. But there is equal room to lament over some of the United States, if recent figures submitted by the Chicago *Inter-Ocean* are correct. While, says that journal, "in France the birth-rate is 22, per 1,000, in Nevada it is 16.30 per 1,000; in Maine, 17.99; New Hampshire, 18.4; Vermont, 18.5; California, 19.4; Connecticut, 21.3, and in

Massachusetts, 21.5. Rhode Island, it appears, has 22.5 per 1,000, a little more than France; Wyoming has 21.8 per 1,000, and Oregon, 22.5. If it were not for immigration, the population would be gradually falling off, and according to statistics, the inhabitants of New England and the Pacific coast will be replaced by another race within a period varying from sixteen to 200 years."

Taking the record of suicides in the New England States among the general population, and comparing the same with the record of suicides among the insured lives, we find, says Mr. L. G. Fouse, the number of suicides among insured lives is from two to four times greater than among the general population. This is, no doubt, due to the fact that men who committed crime, and were liable to punishment, preferred to face death rather than punishment and disgrace, when by doing so their families would be well provided for through insurance. Now he asks: "Is it just and fair that honest policy-holders, because of a maudlin public sentiment, should be compelled to reward criminals, or their families, for committing crime? A man has no more right to insure his life, and destroy it for the profit and advantage of others, even though they be wife and children, than he has to commit arson for his own benefit."

SLIP-SHOD ENGLISH.

The last issue of the *Journal of the Canadian Bankers' Association* contains some half-dozen pages on the erroneous use of words or phrases, pages which may be commended to the attention of a considerable class who are in the habit of using words in a wrong sense, or of using technical or incorrect phrases where commoner words would do. A dozen examples are given, and we select a few of them. The book from which they are taken is entitled *Pitfalls in English*, by Joseph Fitzgerald, M.A. A number of the words and phrases he cites are to be found equally condensed in the pages of the *Standard Dictionary* of Funk & Wagnalls, but Mr. Fitzgerald's style is piquant enough to make us desire to help in the cure of slip-shod English by giving some citations:

"*Posted*, or *Well-Posted*, used in the sense of well-informed, or well read, is slangy and shoppy, smelling very much of the day-book or the ledger."

The author condemns as hideous the very common use of the word *Transpire* as equivalent to Ensues, or Follows. We find it used as if meaning Occur, or Take Place. It means none of these, as a little attention to its derivation will show. Transpire means literally to emit through the pores of the skin, and, figuratively, to ooze out as a secret does—hence, to have vent, to escape.

The author objects to the phrase *Consensus of Opinion*. Thus Opinion or Opinions as equivalent to "the general opinion" seems to have gone clean out of use, being superseded by the phrase Consensus of Opinion. Consensus means agreement in opinions, judgments, etc. and hence, if the Latin word is to be used, it would best stand alone If standing alone Consensus means agreement in opinions, then the too familiar phrase means "agreement in opinions of opinion," not a very neat expression.

Balance.—It is using the language of the shop, pidgin English, and a mere vulgarism, to employ this word in the sense of Remainder, as: "I will send the Balance of the tripe to-morrow." When the fishmonger is selling sprats and his scales are not in equipoise, he throws in one more sprat, and that sprat may without doing violence to propriety of language be called the Balance. But even a fishmonger might hesitate to call that part of an order for sprats which he fills by supplementary delivery the Balance.

Secure (verb) is one of the words that are overworked. It comes from the Latin adjective *Securus*, our English adjective Secure, which means primarily, free from care or anxiety. Hence the first meaning of the verb would be to make safe, as from danger to life or against theft, etc. Derivative senses are, to make fast so that a thing shall not fall from its place; to make sure, to put beyond doubt; to give warrant of the safety of a thing, hence to insure; finally, by a process not very readily traceable, to get possession, obtain. It is in this last sense that the word is overworked. We no longer get, obtain, or come into possession of, or procure; we always now-a-days secure a situation, secure a bargain, secure a meal, or a theatre ticket, nay, even we secure securities.

TO CORRESPONDENTS.

Amateur, Toronto Junction, writes: "I have read what you told us last week about the British Association and its coming meeting in Toronto. Will you kindly say when and where the public meetings are to be held and if any scale of charges has been arranged for admission to them."—[We reply that any person wishing to obtain the privilege of attending sessions of the various departments in the University Building must secure a ticket of associate membership. This costs $5, and can be had from Professor A. B. McCallum, at Toronto University, or from Mr. James Bain, jr, Public Librarian. We understand that none but members or associates can secure admission to the opening meeting in Massey Hall. Indeed there are, we believe, to be no public meetings or open meetings in the sense in which "Amateur" seems to understand the phrase.]

Banker, London.—Not having had any share in circulating the rumor about the probable amalgamation of the Merchants' Bank of Canada, the Bank of Nova Scotia and the Bank of British Columbia, we have not felt called upon to contradict the story. It has been denied within the week by one bank in Montreal and another in Halifax.

ONTARIO CHEESE BOARDS.

The offerings of cheese at Ontario board meetings are well maintained. We have received reports from sixteen boards at which 25,323 boxes were offered as compared with 33,000 boxes boarded at eighteen meetings a week ago. The decreased movement is no more than would be expected from the advancing season and unfavorable weather. Prices were steady and firm, ranging between $7\frac{3}{4}$ to $8\frac{1}{8}$ cents per pound, with the majority of transactions at a fraction over 8 cents. Exports from Montreal for the week ending July 24th were 73,908 boxes as compared with 66,252 boxes for the corresponding week last year. We append our usual table:

Boards.	Date of meeting. July.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date next meeting
Kingston	22	..	1,536	....	$8\frac{1}{16}$	......
Brockville..........	22	..	5,000	2,162	$8\frac{1}{16}$-$8\frac{1}{8}$	......

FOR GROCERS AND PROVISION DEALERS.

According to advices just received, the new crop of Jordan almonds is estimated at about 60 per cent. of the 1896 crop. This latter, however, was said to have been the largest on record.

Mr. G. A. Deadman, of Brussels, reports fair prospects for a good honey yield with plenty of swarms. The largest number in one day has been fifteen. He has now over 250 colonies, or upwards of 5,000,000 bees.

A despatch from Shoal Lake, Manitoba, dated last week, states that "Mr. Scott is shipping a carload of creamery butter to Bristol, England, by to-day's train. A special refrigerator car is being used for the shipment."

The Valencia raisin crop, it is said, is unusually early, and the first shipments will be made early in August. Best layers are offered from Denia at a lay down cost of 7c. in New York, but buyers do not seem to be interested.

The movement of the Brazil coffee crop at Rio and Santos, the two principal centres of the industry, continues large. It is estimated that the receipts at these two ports for the month of July will exceed 900,000 bags, being the largest ever recorded for this month in the history of the trade.

Prof. James W. Robertson, Dominion dairy and agricultural commissioner, cabled from London, England, this week, reporting that the trial shipment of dressed beef carried in cold storage chambers arrived in good condition, and was disposed of advantageously. Prof. Robertson will sail for home on August 5th.

Favorable advices are received from Smyrna about the fig crop. The weather of late has improved, and the comparatively cool and dry winds prevailing are well calculated to develop the fruit and assure the soundness of quality, about which some fears were entertained owing to the excessive rainfall of the year. The present estimates are 70,000 to 75,000 loads, against 67,000 loads in 1896.

The cattle shipments of Gordon & Ironside have now commenced to move in earnest. Says the Winnipeg *Free Press* of the 23rd : Three trains will leave to-day for Montreal with over 1,000 head of cattle on board. The grass fed cattle are now ready for shipment, and as prices are good, many herds are being secured for the Old Country markets. Mr. Gordon said yesterday that 10,000 head had been sent east this month alone by his firm.

The Liverpool *Mercury* says: "The first shipment of dressed beef from Canada has just arrived in Liverpool in refrigerator chambers, subsidized by the Government of the Dominion of Canada, on the steamship 'Labrador.' It was consigned to Messrs. John and George Nickson & Co., Limited, of this city, who turned it over to Mr. William Simpson, of St. John's market. The beef in weight and quality was entirely suitable for the local Liverpool and provincial trade. This shipment of beef is the beginning of what will doubtless be for Liverpool a trade of quite as large a volume and as great a value as the trade which the city is now doing in Canadian cheese."

ABOUT DRY GOODS.

A number of Canadian dry goods merchants are now in the textile centres of Great Britain purchasing supplies. The following arrivals are noted in the English drapery papers of the 17th inst.: R. J. Tooke, Montreal; Mr. Cummings, Messrs. Cummings, Son & Co., Truro, N.S.; John McIntyre, Messrs. McIntyre, Son & Co, Montreal; Mr. Murphy, Montreal; Mr. Hart, Montreal; C. Cockshutt, Toronto: F. C. Kaizer, Halifax, N.S.; S. C. Lacroix, Mr. Z. Paquet, Quebec.

From the last circular of Bavier & Co., dated Yokohama, June 28, 1897, we take the following: "In the western provinces the product of the new crop is ascertained to be less than last season. These districts supply about 20 per cent. of Japan's total silk output, and are reported to be about 10 per cent. short of their last year's figure. On the other hand, the cocoons thus far completed in the northern districts are giving a very bountiful yield of thread. The turning point now rests with the great producing districts of Sinshiu, Oshiu, and allied provinces where the worms are at the most critical stage. Should these districts meet with no mishaps we may count on a crop at least equal to last season, and probably 10 per cent. more. Ten days must elapse before the final result is known.

According to the circular of the Irish Flax Supply Association for June, contrasting the imports of flax and tow in the month just ended with the average imports of the previous five years, shows an increase of 15.9 per cent. in quantity, and 9.5 per cent. in value. The shipment of linen piece goods, comparing June, 1897, with average of June in last five years, is increased 60.8 per cent. in the total, or 19,509,100 yards, against 14,912,040 yards, but taking the United States alone, the increase is 81.7 per cent., or 14,136,200 yards, against 7,778,280 yards, or, in other words, of the total quantity exported in June, 72.5 per cent. was sent to the United States, and 27.5 per cent to all other ports. To Australasia the decrease is 8.3 per cent., to foreign West Indies, 79.3 per cent., and to British North America 11.8 per cent.

The *Draper's Record*, July 17th, contains the following: "What fools your counting-house men are on this side," said the buyer of a well known Canadian firm as he hastily descended the stairs of one of our big city houses six months ago, in company with the gentleman who looks after the export end of the business. "What have they been doing now?" said the latter. "Oh, only asked me for the figures of my firm's financial position," he replied. "I call it most insulting to an old-established firm such as ours; but, no matter, there are a score of London houses who will be glad to see me," and excitedly the buyer made his exit, while the expectant salesmen gathered round the export man to hear of the latest bungling of the counting-house. With a wise shake of the head many of these gentlemen afterwards retreated to their various departments, all of one mind, viz., that the counting-house had again destroyed good business. Six months elapse, and in the meantime business in Canada has not improved. Rumors are current that a wholesale house is on its last legs, and many people are inquiring the name of that house. The buyer, of course, is expected in the market, but, strange to relate, he does not appear. Then a cable arrives, and the same little group are to be found discussing the situation. But the verdict at which they arrive is dissimilar to that above mentioned. The salesmen form quite another opinion, and believe that, after all, the counting-house was not far out in its calculations. Such is the nature of a drama played within the last six months.

—The oldest bank manager in London, England, Mr. William Astle, who has been in the service of the London and Westminster Bank for fifty-six years, twenty-two of them as manager, retires from active management. He has been elected a member of the board of directors in place of the late Mr. Howard Potter. Further resignations of London bank managers is that of Mr. William Board, of the London and Counties Bank, and that of Mr. T. G. Robinson, manager of the National Provident Bank.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, July 29th, 1897, compared with those of the previous week :

CLEARINGS.	July 29.	July 22.
Montreal	$11,857,044	$12,084,921
Toronto	6,686,952	7,462,613
Halifax	1,082,917	1,224,380
Winnipeg	1,291,626	1,339,930
Hamilton	481,234	559,036
St. John	764,046	693,929
	$22,163,819	$23,364,809

Aggregate balances this week, $3,488,198; last week, $3,707,826.

—If one studies the statistics of accidents some curious things appear. Bicycles are the cause of almost as many accidents as carriages and wagons, from which it might be argued possibly that there are already more bicycles in the world than there are wagons and carriages. On the other hand, out of several thousand accidents only ten or twelve per cent. were due to railways, which are usually deemed to be a more prolific cause. An American exchange cites a list of 4,000 given accidents, and says that 681 of these were caused by falling on the pavement, while 143 were from slipping down stairs, with 157 due to miscellaneous causes, making a total of 981. Accidents from riding in carriages and wagons are given at 421, which is closely followed by that new form of accident on the bicycle, coming up to 413. It is shown that 264 persons were cut with edged tools, while 195 suffered from the falling of heavy objects. Kicking horses were the cause of 134; nothing is said about mules. The whirring of intricate machinery, from which one would expect an immense number of accidents to occur, really has but a small percentage to its credit, being only 107. There were 72 eyes hurt, 69 fingers crushed, 55 people stepped on nails in their stockings; and, singular to relate, out of 4,000 accidents, only 43 were due to railroads. The list shows that the least number of accidents come to men who avoid artificial modes of locomotion.

—An American manufacturer, Mr. John W. Harrison, whose cast-iron pipe works are situated at Philadelphia, visited, while in England, some establishments of like character with his own. He was apprehensive that because in some degree a rival, his wish to visit the manufactories would not be gratified. But he made application, without any concealment, and was given the privilege in every case but one. In fact he was shown the greatest attention. Speaking of the manufacturers in Britain, he says: "I was, in truth, much taken with the open-handed, straightforward and honorable way in which business of all kinds is conducted in Britain. Everything is open and above board. A business man's word there is trusted, not regarded with suspicion. The same high degree of honor and personal responsibility obtains over there in the hundreds of business organizations having to do with prices and what not. The minimum for prices fixed by associations in the various branches of the iron trade, in glass, etc., has no lower depths. If an iron or pipe man tells his customer that he will give him the minimum price on a certain article, that customer does not go any further to look for a lower price."

—Changes in the staff of the Canadian Bank of Commerce are announced as under. By reason of the growing importance of the Chicago and North-West business, the bank has appointed a direct representative in Chicago, Mr. H. B. Walker, manager at Windsor, having been selected for the position of agent there. Mr J. L. Harcourt, assistant manager at Montreal, has been appointed manager at Windsor and Walkerville branches, in room of Mr. Walker. Mr. G. H. Meldrum, assistant inspector, receives the appointment of assistant manager at Montreal, in room of Mr. Harcourt. Mr. M. Morris, manager at Seaforth, becomes assistant inspector, in room of Mr. Meldrum, and Mr. F. C. G. Minty, sub-manager at Walkerville, is appointed manager at Seaforth, in room of Mr. Morris.

—In answer to a correspondent in Peterboro', who asks for the fire loss of the United States and Canada for the half year ended with June last, we would say that it shows a marked diminution, being $57,940,450, as compared with $63,959,500 for the same period of 1895. The losses of the first half of 1894 were still greater, being $66,597,600. The fire loss for June was very small, viz., $5,084,450, which was $700,000 less than in 1895, and $2,100,000 less than 1894.

Correspondence.

COMPROMISING DEATH CLAIMS.

Editor MONETARY TIMES.

SIR,—My attention has been called to a letter in your paper from Mr. W. J. McMurtry, manager at Toronto of the Mutual Reserve Fund Life Association, in reference to the claim in that company on the policy of my late husband, Dr. R. H Gowland. Hitherto I have refrained from making any public statement about the matter, in order to avoid undesired publicity; but the veiled insinuations of Mr. McMurtry, reflecting upon the integrity of my late husband, compel me to refute what I know to be a false statement.

After stating the facts, Mr. McMurtry says: "Dr. Gowland must have known when he accepted the conditional receipt on July 30th, 1896, that he had not been in good health during the year previous, and he could not have overlooked the fact that in the previous November he had been at Johns Hopkins Hospital for treatment, and he also must have known that in the previous August he had been treated by Dr. Malloch for this same disease, which ultimately caused death."

Again, in your editorial, you state that Mr. McMurtry told you that "Dr. Gowland was reinstated by conditional receipt *upon giving a statement that he was in good health and had been in good health for a year.*" Now I notice that Mr. McMurtry is careful not to make the latter statement over his own signature, for the facts of the case are that NO evidence of health was given to the company at the time the reinstatement took place, nor did the agent ask for any evidence of health. To make matters more clear, I may state that Dr. Gowland had been in the habit of making medical examinations for an agent who did business for the Mutual Reserve, and it was understood that this agent was to pay the assessment on the doctor's policy on account of the medical examinations, and when notice was received that the policy had lapsed in June, 1896, it was a matter of surprise that the local agent had not paid in the assessment, *but the company accepted the premiums without any question as to state of health.* I do not suppose the conditions on the back of the receipt were ever read by my husband, as no question had been raised by the company as to his then state of health, and the company kept on taking the premiums after that date, so that it appears to me that "a very unfair advantage" was taken in the attempt to settle his policy for half of its amount.

It may also interest you to know that immediately after the death of my late husband the company sent what is called an adjuster to this city, who made minute enquiries from various medical men in Hamilton as to the state of health of Dr. Gowland at the time be was insured, and I am led to believe that an attempt was thereby made to find some ground for contesting the claim.

However, not succeeding in that, the company did nothing further until pressed for payment, when they refused it, on the ground stated by Mr. McMurtry; but they informed me that a representative of the company would call upon me and "go over the matter." Shortly afterwards, an adjuster came to Hamilton and made repeated attempts to compromise the policy for half its amount; but on the advice of my solicitor, this was refused and payment in full demanded. Not long after this, an article in THE MONETARY TIMES showing up the compromising of the Mrs. O'Brien claim, gave such publicity to these cases, that it appears the company changed their minds and decided to pay the claim in full; but the fact remains that the company *did* attempt to compromise this claim with me, and it was not until public exposure of the other case took place, that they decided to pay me in full.

To further illustrate the method of dealing with beneficiaries employed by this company, I may add that an elaborate and lengthy letter of profuse and grateful acknowledgment was carefully drawn up and brought to me by the agent for my signature; but as I knew of no reason for expressing special thanks for the manner in which I had been treated, I refused to sign it.

In view of all the facts, I must say that I have very little confidence in any company that would treat a widow in the way the Mutual Reserve attempted to treat me, and if my advice were asked it should certainly be—keep out of any concern which deals in such sharp practices as the Mutual Reserve Fund Life Association appears to do.

In conclusion I deem it only fair to add that the Ontario Mutual Insurance Company, the Independent Order of Foresters, and the Canadian Order of Chosen Friends paid the claims under their policies promptly and without question.

Regretting the necessity of this letter, I am,

Yours truly,

ELLA A. GOWLAND.

Hamilton, July 27th, 1897.

CANADIAN AND AMERICAN FIRE ENGINES.

Editor MONETARY TIMES.

I think an article on Canadian versus American fire engines appropriate for the time, the circumstances, and the columns of your journal. In my tender for an engine at Ottawa I beat the La France engine by $2,500 each, $5,000 on the pair, over 60 per cent. No use. On the truck, same form, their price, $4,900, ours, same truck, $3,300.

In Montreal for a large steamer the La France Company asked $8,000, the whole appropriation; I asked for Ronald engine $5,000, or 80 per cent. less. ,No use. We were all tendering on a set of specifications —70 lbs. of steam in five minutes, 1,200 gallons for each minute in a running test, maintaining 280 lbs. water pressure. Here is $25,000 a year average business going to the States, at a time when Canada, her shops and her men need every help. Open charges of boodle were made at Ottawa, and the press should frown it down.

Sledge-hammer blows have been struck at the system in Ottawa; nearly half the Council resigns, the largest ratepayers in the city ask for a test, and fair play for Canada. The Mayor is dumb. I have in Montreal and Ottawa plainly shown that Ronald engines can undersell the American. We have in no way taken advantage of the 35 per cent. protection, as our figures at Ottawa total $5,700 less than the American articles.

Doing business with corporations is different from dealing with individuals; hence the boodler has a splendid opportunity. I think the time has come for the Canadian press and pulpit to rise and strike a blow at this monster.

JOHN M. PARSONS.

379 Wellington street, London.

MASSACHUSETTS BENEFIT LIFE.

The affairs of the Massachusetts Benefit Life Association have occupied an unusual share of public attention for considerably over a year. Its methods have been criticized, committees of policyholders and of the Legislature have investigated it, the Attorney-General has reported regarding it, the management has been changed, and as a result of all this it is not at all surprising that the prospects of the association soon going into the hands of a receiver are most promising. The managers are making a desperate effort to recover lost ground, but there seems little chance of their succeeding. An extra assessment has just been made upon the old members—equal in some cases to twice the amount of the regular assessment, so that the member who has paid $50 is called upon to pay $150—for the announced purpose of paying off $325,000 of overdue claims, accumulated because the rates charged the old members did not bring in enough money to pay claims as they were presented. If $325,000 would liquidate all the liabilities of the association and preserve its business, it might be worth while for the members to pay this assessment, but we are informed that there are claims pending, but not yet all approved —that have been pigeonholed, in fact— which, with other indebtedness, will swell the total of liabilities to fully $900,000.

The total invested assets of the association on January 1, 1897, according to the Massachusetts report, were $663,809 Of this sum $115,000 is deposited in Canada and $50,000 in South America, both sums for the protection of policyholders in those countries and so beyond hope of return. About $200,000 is invested in the association's building in Boston, and $138,921 in loans on mortgages that must be foreclosed before the cash can be received from them. None of these can be considered as "quick assets," readily convertible to pay claims. This may be called the ash financial condition of the association; in addition, it claims $218,893 of assets that the Massachusetts Department does not admit, and $711,000 "contingent mortuary assets" against which there are "contingent mortuary liabilities" amounting to $679,486. It will be seen that it will take considerably more than $325,000 to pull the association out of the woods, whence it can emerge under the most favorable conditions only with a damaged reputation and serious loss of members. The question the trebly assessed members have to ask themselves is: "Is it worth while to strive to save an association that is in such a damaged condition; will it pay to send our good money to look for that already lost?" It can hardly be expected that there will be many affirmative answers to these questions, and if the required money is not forthcoming a receiver for the association seems to be inevitable.—*N. Y. Spectator.*

PRINCE EDWARD ISLAND ELECTIONS.

The provincial elections yesterday resulted in sustaining the present Liberal Administration, though by a much decreased majority. Pending some changes that may result from special votes, the precise number of the Government's majority is uncertain, but is probably sufficient. In the late House their support was no doubt more numerous than was desirable, and the Opposition too weak for an efficient discharge of their functions. This was the pretty general feeling throughout the province.

As it turns out there is much disappointment on both sides. The large number of Conservatives who hoped to see their party capture the seals of office, and who put up so strong a fight to win, are naturally disappointed that they were doomed to failure while coming so near to success. On the other hand, the confident Liberals find it rather unpleasant to have the greater part of their large majority swept away.

The lesson should be taken to heart by Premier Peters, and the Government, and in that case may be useful. The general feeling of the country is that the expenditure has been upon too large a scale for our limited revenue, and that the Government had before coming into power, raised expectations of retrenchment and economy that were not fulfilled.—*Island Guardian*, 22nd July.

CANADA SHOULD DO ITS OWN SMELTING.

The following despatch from F. W. Peters, district freight and passenger agent of the Canadian Pacific Railway at Nelson, appears in the Rossland *Miner* of 17th July:

"On reading the article in your issue in connection with the recent interview between Senator Turner and our vice-president, I was satisfied it was wrongly reported, and a telegram from Mr. Shaughnessy confirms this view. Senator Turner was informed that we would not be able to give him coal or coke from the Crow's Nest mines until the year after next. He was told in reply to an enquiry that if he located in British Columbia he could get coke from Nanaimo at a low figure.

"In the meantime the difficulty was the freight rate from Rossland to Robson on ores. It was explained that our company had no means of controlling that rate unless they built a parallel line, and they did not favor that policy unless it became necessary. It is claimed by the Columbia & Western road that an unreasonably low rate is demanded, and our management has this subject under discussion and hopes to make an arrangement regarding the rate which will remove the necessity of constructing our own line immediately.

"Our management intends placing the Rossland camp in a position to do its smelting in British Columbia to better advantage than elsewhere, but this cannot be accomplished in a day. Our policy for the past year clearly indicates that we are steadily moving with that end in view.

"F. W. PETERS."

Upon this letter the *Miner* comments as under: It is most gratifying to us to know that the C.P.R. "intends placing the Rossland camp in a position to do its smelting in British Columbia to better advantage than elsewhere." This is even more than Rossland has asked. All we have contended for was such a disposition of rates as would enable Rossland to smelt its ores as cheaply in Canada as elsewhere, in which case the Dominion Government could be depended on, by means of an export duty, if necessary, to see that the smelting was done in Canada, and that this country got the full benefit of its mineral resources, and the industries pertaining thereto.

It matters nothing to Rossland where the smelters are located that treat its ores. All that Rossland wants is the lowest possible rate so that her mine-owners may earn the largest possible dividends and by producing the largest possible amount of ore employ the largest possible number of miners. To Canada the question has a different bearing. In addition to the number of miners employed, Rossland's mines, through the medium of smelters, furnish work for hundreds of smelter hands. By erecting these smelters in Canada work at good wages can be furnished to hundreds of Canadians. Such a plant as the Le Roi contemplates erecting will, directly and indirectly, furnish work for nearly 300 men. If built in Canada it will get its supplies of coal and coke from the mines of Vancouver Island and the Crow's Nest Pass. All of these laborers will be consumers of Canadian products.

MINES REGULATION ACT.

At the request of a subscriber in Port Arthur we append extracts from an Act passed last session by the Ontario Legislature to protect the public from mining fakirs:

"Sections 9 and 10 of the Act respecting the incorporation and regulation of mining companies of 1897:

"Section 9.—No extra-provincial mining, milling, reduction or development company having its head office elsewhere than in this province, shall, either directly or indirectly, sell or otherwise dispose of within this province any of its shares, stock, stock certificates or other securities by whatsoever name known, unless and until it shall have received from the Lieutenant-Governor-in-Council a license authorizing it to sell and dispose of its shares and other securities, and any person who in contravention of this section acts for an unlicensed company shall on conviction thereof, be liable to a fine of $20 per day for every day while he so acted, and, in case the fine be not paid, shall in the discretion of the court be imprisoned for a period not exceeding three months.

"Section 10.—No license shall be issued to an extra-provincial mining, miling, reduction and development company having its head office elsewhere than within this province until the company shall have satisfied the Director of the Bureau of Mines that it has been duly incorporated, and that it possesses the real estate, property and assets, and that it is carrying on its operations on a scale and in a manner to command the confidence of the public, and for this purpose the director shall have the power to require of the company such sworn documentary and other evidence as he shall deem to be requisite in the premises, and upon a report that he is satisfied that the company is one which may be licensed under this section and upon this recommendation of the Provincial Secretary, the Lieutenant-Governor-in-Council may direct the issue of a license upon such terms and conditions as to him shall seem proper, and he may summarily revoke and annul such license for any cause that to him shall appear to be sufficient."

PRESENCE OF MIND.

In a work entitled "Naval Administration, 1827-1892," written by Sir John Briggs, for many years Chief Clerk to the Admiralty, appears the following good story:

A question arose at the Board of Admiralty as to what punishment should be administered to a midshipman who had been absent from his ship without leave. Sir Charles Adam, one of the sea lords, insisted that he should be dismissed the service, and a minute to that effect was actually prepared. Scarcely 20 minutes had elapsed when a member said to me: "Is there any letter of complaint against Mr. —— ?" I answered, "why, you have just ordered him to be dismissed the service," whereupon he said to Sir Charles, "you must not dismiss Mr. —— ; here is a letter from his captain, who says he is the best midshipman in the ship." "The devil he is!" said Sir Charles. "It seems, after all, the boy has only absented himself for 24 hours to get a farewell kiss from his cousin, a confoundedly pretty girl! The fact is the admiral has a fit of the gout, the flag captain has been put under arrest twice this week, and the poor secretary is afraid to go near him." There was a general opinion that dismissal was out of the question. Was he to be deprived of any time?

At last it was decided that a good jobation would be enough, which was soon translated into official phraseology. It was at this stage that Sir Charles Adam, turning to Lord Auckland, said: "I am the last man in the world who ought to have advocated his dismissal, my lord, for I was guilty of something of the same sort myself once." "And yet you were the first, Sir Charles, to propose it, and hustle the poor young man out of the service!" "Yes," he replied, looking the picture of good nature, "I do feel rather ashamed of myself. The case stood thus, my lord. My frigate was lying off Belem at single anchor, with Blue Peter flying, under orders for England, when I thought I should like to have another kiss of an uncommon pretty Portuguese girl, one Donna Maria Angelina Sebastiana Victoriosa, etc., di Ponjos. I arrived at the door, gave a loud knock, when to my utter astonishment who should open it but Lord St. Vincent himself! I bowed to the very ground, my cocked hat touching it, and said, 'my frigate is ready to start, my lord, at a moment's notice, riding a single anchor, Blue Peter flying, but I considered it my duty to come to your lordship at the last moment, thinking it just possible you might have some important despatches for the Admiralty.' 'That d——d lie, sir,' said Lord St. Vincent, 'has raised you very much in my estimation; it proves to me that you are able to meet a sudden and somewhat unpleasant contingency with considerable adroitness; but you had better be off, or a court-martial might be the consequence.'" To explain the presence of Lord St. Vincent, Sir Charles said that his lordship was rather sweet upon the mother, a young and attractive widow.

THE COMING MARINE ENGINE.

The presence, by request, of the new steamer "Turbinia" at the naval review off Spithead the other day, has suggested the prophecy that the lines of battleships she ran through at the time will all be superseded in the next twenty years by vessels with turbine engines. But these engines possess other qualities besides speed. They are economical and the weight per horse power would recommend them for merchant ships

Mr. Parsons told the following about his invention in a paper read before the Institute of Civil Engineers on May 26, and he seemed much more certain of the practical application of the steam turbine to marine purposes than he was in his original paper regarding the "Turbinia. The consumption of steam on that vessel's trials, he said, had not exceeded 14½ lbs. per indicated horse power at full load, which is less than with ordinary reciprocating engines. This would enable the size and weight of boilers and the amount of coal carried to be reduced, and the high speed of the engines diminishes not only the weight of the engines themselves, per horse power, but also the weight of shafting, propellers, and hull. "The total weight of machinery in vessels of the torpedo boat destroyer class on the turbine system," says Mr. Parsons, "will probably not exceed one-third that of ordinary engines of the same power."

Although the "Turbinia" has made a speed of 32 3-4 knots an hour, or nearly 37 3-4 miles, Mr. Parsons does not believe she has reached her limit. "It is anticipated," he says, "that after some alterations to the steam pipe still higher speeds will be obtained. In the 'Turbinia' the stresses on the boiler and machinery are, as far as possible, according to Board of Trade rules, and the scantlings of the hull are heavy for a boat of her size and class. It is believed that when boats of 200 feet in length and upwards are fitted with compound turbine motors, speeds of 35 to 40 knots may be easily obtained in vessels of the destroyer class, and it is also believed that the turbine will, in a lessor degree, enable higher speeds to be realized in all classes of passenger vessels."

The "Turbinia" is 100 feet long, 9 feet in beam, 3 feet draught, and of 44½ tons displacement. Her machinery weighs 22 tons. The steam is supplied to the turbines at 170 lbs. pressure and expanded until it indicated only one pound pressure to the square inch at the end of the third turbine of the series, and then it is pumped out and condensed. At full speed the turbines and screws make 2,200 revolutions a minute. The steam is supplied from a water tube boiler, working under forced pressure, the air being supplied by a fan which works on the inboard end of the low pressure or central screw shaft. This arrangement has the double advantage of utilizing the power from the main engines, and also of delivering the air in exact proportion to the steam that is being used and the power generated.—*Marine Review.*

—"Did you say that this is to be a wedding present?" asked the clever salesman in the china store. "No. I didn't say anything of the kind," replied the man who was making the purchase. "And I don't see that it makes any difference to you." "Not the slightest," was the reply. "I merely thought you might like to have us take off this price mark and paste on another with a higher figure on it."

—A boiler with the plates welded together, no rivets being used, 22 feet by 6½, has been built at Gleiwitz, in Saxony.

—The Three Rivers Iron Company has obtained the contract for the Renfrew water and sewerage works. The job is to be done within four months. The contract price is about $55,000. A gang of 125 men will begin work immediately.

—Thank God every morning when you get up that you have something to do that day which must be done whether you like it or not. Being forced to work and forced to do your best will breed in you temperance, self-control, diligence, strength of will, content, and a hundred virtues which the idle will never know.—*Kingsley.*

—The falling of the book closets in the record room of the County Clerk's office, Brooklyn, last Wednesday, will cost the county about $100,000. A million papers bearing on actions dating from 1820 to the present time, are badly mixed and will need to be reindexed and rearranged, a work which had just been finished at a cost of $200,000.

BUSINESS NOTES.

The John Watson Manufacturing Co., Limited, Ayr, is now an incorporated company.——The general store business lately operated by Marks & Co., at Bruce Mines, will in the future be conducted by Dobie & Cade.——At Hamilton the drug firm of Blaicher & Riche has dissolved partnership, and J. A. Riche will continue under the old style.——Louis Goudrier has commenced selling shoes at Kingston.——The pork packing firm of Hutchinson & Cook has been dissolved at London, and hereafter T. J. Cook & Son will continue.——Mrs. M. Rose has sold her Petrolea grocery to F. Scarsbrook.——E. A. Smith has purchased from Apps & Hankinson their St. Thomas grocery stock.——W. J. McCoomb, a London grocer, is not in business there any more.——Letters patent of incorporation have been granted to the following Toronto firms: Arbuthnot Bros. Co., Ltd., publishers; M. Doyle Fish Co., Ltd.; and the Rational Bicycle Seat Co., Ltd.——The Gibson Paper Box Co. has sold out to the Globe Paper Box Co., Toronto.—— Geo. Bowditch & Co., an old established hardware firm at Woodstock, is going out of business, and C. H. Gerbig is moving his general store business from that town to Baden.

THE REFRIGERATOR SERVICE.

The United States Department of Agriculture is taking an interest in the Canadian cold storage and steamship refrigerator service. Enquiries have been received by shipping men in Montreal from the Bureau of Animal Industry, at Washington, asking whether butter made in the United States and forwarded for shipment through Canada would be received and promptly exported by the Montreal steamers; and, providing the vessel which sailed next after the arrival of such United States butter in Montreal, should have no room for it, what would become of it? Enquiry was also made as to through rates to Liverpool, Manchester and London. The questions, it was stated, were the result of enquiries from the West sent to the bureau at Washington. It is learned that the reply sent is likely to be satisfactory. There is now provided ample refrigerator service from Montreal to Great Britain for all the Canadian freight that offers, and the bureau was informed that the United States butter would be received and promptly exported if sent by Montreal.—*Montreal Gazette.*

THE MAN DOES IT, NOT THE PROSPECTUS.

A new volume of literary reminiscences tells this amusing Palmerston story: "When a stipendiary magistrate's place fell vacant when Palmerston was Home Secretary, 'Pam.' arrived at Downing street one morning, and was confronted with a pile of letters. 'What the devil are these?' said he to his subordinate. 'Applications for the vacant magistracy.' 'Do they think I am going to read all these d—n things? D'ye know,' he asked of the subordinate, 'anyone who would do?' There's Mr. Burrell, my lord—Mr. Burrell, of Gray's Inn, a very good man.' 'Well, well,' said Palmerston, 'let him have it, then.' And Burrell had it, and held it for many years."

Commercial.

TORONTO MARKETS.

Dairy Produce.—The receipts of dairy butter have not been as large this week, and buyers are not disappointed as the quality of arrivals shows deterioration through the hot weather. There is little or no export demand for dairy butter, but creamery continues to find a good market in the United Kingdom. We quote:—Dairy, finest, 11 to 12c.; No. 2, 8 to 9c. per lb.; Creamery, tubs, 17 to 18c.; pound prints, 18 to 18½c. per lb. This has been a quiet week in the local cheese market. Merchants have been jobbing cheese at 8½ to 9c. per lb. Elsewhere we review the condition of outside markets. The receipts of eggs are not large, but are more than sufficient for consumers' requirements. The quality of the eggs offered here is by no means satisfactory, and shows the effect of the hot weather. The bulk of the stock is No. 2, and must be sold at a sacrifice. Dried and evaporated apples are firm in value and show an advance of ¼c. per lb.

Drugs.—Business in the general drug and chemical trade is good. Reports from the country indicate a steady and fairly satisfactory improvement. Collections show some improvement, but from some quarters complaints are still received. Values show considerable fluctuations. Cod liver oil is low in price, and a comparison of present prices with those of the same period last year show a marked depreciation amounting to as much as 50 per cent. Opium is steady. Quinine shows an inclination of advance and values have advanced a point this week. Paris green is up 1c. per lb., and dealers quote 14 to 15c. per lb. Gentian root has advanced.

Grain.—The wheat market has been steady and prices firm during the week. Advices from abroad have reported bad weather. The recent heavy rains in Ontario have undoubtedly done some damage to the crops, but at the moment it is impossible to estimate the loss. Oats are firm at an advance of 1c. per bushel in price. Peas remain quiet but steady, with a good export demand. Barley is lifeless with a poor prospect for the future as a result of the United States duty and recent rains. Buckwheat is without special features. Corn remains nominal.

The stocks in store at Port Arthur on July 17th were 1,153,987 bushels, and there were received 251,847 bushels, and shipped 353,722 bushels, leaving in store on July 24th, 1,052,113 bushels.

Hides and Skins.—The enactment of a fifteen per cent. ad valorem duty on the price of hides has failed, as yet, to affect this market. But so soon as supplies have accumulated, as they probably will in the absence of demand from the United States, values may be expected to decline. At present dealers are paying 8½c. to butchers for green hides, and quote cured at a fractional advance. Advices from the west, on the 27th inst., reported a quiet market and stated for native steer hides prices were a bit easier, July take off being offered at 10¼c., whereas 10½c. was the price asked on Monday; branded hides were in comparatively small supply and indifferently offered, packers holding firm at outside prices, closing at 10 to 10¼c. for native steers, 10 to 10¼c. for Texas, 9½ to 9¾c. for butt brands, 9¼c. for branded cows, 8¾ to 9c. for Colorados, 9½ to 9¾c. for heavy native cows, and 10 to 10¼c. for light ditto.

Hardware and Metals.—Trade during the past several weeks has been very brisk, although at the present time the movement shows some signs of falling off. The demand for harvest tools this year has exceeded the most sanguine expectations of dealers and manufacturers. Stocks were not sufficient to meet the demand, and considerable delay has taken place in obtaining supplies. For screen doors and windows there has also been an active demand, while traders found difficulty in filling their orders promptly. Wire, barb wire and cut nails remain steady at recent changes in quotations. The prices of iron pipe have advanced, and dealers quote ½-in. to 2-in., 1⅞ to 8½c. per foot. The price list on files has been changed with the result that prices are slightly higher, while the discounts remain unchanged. In graniteware and tinware a brisk trade is doing. Import orders for Canada plate have been freely given at $2.35 to 2.45 according to distance of point of distribution. In metals, trade is fair, but without features of special interest to report. Sisal rope has advanced ½c. per lb., and is now quoted on a basis of 5⅝c.

Provisions.—There is an active demand for provisions at firm prices. An increase in the price of live hogs has taken place since our last report and the market now quotes $6 per cwt. for selected weights. At even this advanced value there is scarcely sufficient to meet the demands of the market. Product made from hogs now coming forward is being exported. Canadian stocks are very light; heavy class of cuts is in exceedingly short supply. Some packers think that before the season is closed considerable imports must be made from the United States.

Wool.—The situation is one of uncertainty. The tariff bill of the United States having gone into effect, exports across the line have ceased. There is still some doubt as to the classification of wools, and consequently the amount of the duty. An exporter was compelled to pay 24 cents per lb. on Canadian fleece this week, which he did under protest. Market values are not yet established. The large shipments which have taken place within the past several months have reduced stocks here, and it is likely that the domestic mills must buy their supplies at an appreciation of prices, although values are lower than they were before the duty. Dealers quote 18 to 19c. per lb. for good merchantable fleece wool.

MONTREAL MARKETS.

Montreal, 28th July, 1897.

Ashes.—The market continues inactive, values depressed, receipts very small. We quote first quality pots at $3 to $3.05, seconds $2.80, pearls nominal at about $4.30 per cental.

Cements, Firebricks, etc.—A very fair week's business is reported for the season; sales of a 1,000 brl. lot, a 500 brl. lot, and other more moderate parcels have taken place at steady prices. Receipts for the week ending to-day are 7,800 brls. of Belgian, and 1,750 brls. of English. Of firebricks the receipts are 32,000. Quotations remain without any variation whatever.

Dairy Products.—The cable quotations from Liverpool show some further decline in cheese, the figure now being 39s. 6d., and the local market is a shade easier, but not very notably so; we quote, finest Ontario, at 8½c.; Townships, 7¾ to 8c.; Quebec, 7½ to 7⅝c. per lb. Shipments last week were some 18,000 boxes behind corresponding week last year, but were still fairly large, amounting to 72,678 boxes, and the total exports to date are some 164,500 boxes ahead of this date in 1896. Butter shipments hardly increase as was expected, and last week's figures are comparatively small, amounting to 2,303 packages. The total exports of butter for the season to date are 32,905 packages. Values in this line rule quite steady, and we quote fine creamery 17 to 17¼c.;

GROCERIES.—Wholesale merchants here as a whole profess to be fairly satisfied with the business doing. They say that their advices would indicate light stocks among retailers as a rule, and that though orders are not large they are numerous. First lots of new Valencia raisins for this market left Denia on the 22nd, *via* Liverpool, and are due in about four weeks from that date; they are calculated to cost about 5¼c. laid down, and are being offered in a jobbing way at 5¾ to 6c. to arrive. Quotations for new currants by first direct steamer have been received, and are away above last year's opening figures, as was expected. Provincials are quoted at 15s. 6d.; Filiatras, 16s; Patras, 18s, and Vostizzas, 22s. Canned vegetables are dull at the moment, owing to high prices and new vegetables being on the market. Canned salmon is low, and being quoted at $1.20 to $1.25 for good brands. Teas are in better request, more particularly good medium Japans. The market in Japan, which has been in somewhat weak shape since the rush of American buying stopped, has stiffened materially, and several cables have been received here reporting an advance equal to a cent and a half per pound. In London, Ceylons are easier; advices from Foochow report opening prices about the same as last year. An active sugar market is reported, there being a good demand both from the country and from jobbers. Factory prices remain steady at 4c. for standard granulated, and 3¼c. upwards for yellows. Some second grade granulated has been put on the market in competition with the foreign refined sugars, and has been sold from the refinery in round lots at 3⅜c. Some attractive samples of Dutch refined granulated, supposed to be cane sugar, have been shown here. They come in 100-lb. lined bags, and are quoted to cost about $3 75 laid down. The New York market has been very active; the trust is reported to have bought 75,000 tons of raws on Monday, and prices of refined there are considerably above the level of this market. Molasses dull at the moment; card prices are 24c. for single puncheons of Barbadoes, brls. 26½c., halves 27½c., car lots 1c. less. For Porto Ricos, quotations are a cent higher.

LEATHER.—Comparatively little activity prevails in this line, and the dull flat level that has prevailed for several months past is, as yet, unrelieved to any great extent. Some moderate lots of sole are moving, and tanners are stiff on prices in this line, owing to good demand in England, where prices are firmer; but the local enquiry for black leather is limited. Tanners are reported to be shipping fair lots of splits regularly to England, which also tends to sustain local quotations in this line. We quote:—Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c.; Scotch grained, 30 to 35c.; western splits, 20 to 22c.; Quebec do., 15 to 17c.; juniors, 14 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c.; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

METALS AND HARDWARE.—Noteworthy transactions have been few the past week or so. A few moderate sales have been made of Summerlee pig iron at $17, ex-wharf, and $17.50 to $18, ex-yard. Scotch warrants are cabled easier, at 43s. 11d. There is some momentary scarcity of Hamilton pig, and other domestic brands are out of the market. Domestic bars are easy at quotations; sales of American bars are reported at several border points. In other lines we hear of nothing new. We quote:—Summerlee pig iron, $17 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25; Ayrsome, No. 1, $16 50; No 3, $16; Shotts, $17 25 to 17.50; Carnbroe, $17.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13 00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D. Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1.50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 35 to 3.50; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1 90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c.; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.60 to 4.75; antimony, 8½ to 9c.

OILS, PAINTS AND GLASS.—Matters rule quiet in these lines, with little variation in values. Paris green is easier as the advancing season lessens the demand, and bulk lots could now be bought at 12½c. Dry lead is reported 10 shillings firmer in Europe, and manufactured leads should be stiffer, but at a recent meeting of the association it was decided to make no present change. Other lines are just as they were. We quote:—Turpentine, one to four brls., 41c.; five to nine brls., 40c., net 30 days. Linseed oil, raw, one to four brls., 41c.; five to nine brls., 40c.; boiled, one to four barrels, 44c.; five to nine brls. 43c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½; No. 2, $4.25; No. 3, $3.87½; No. 4, $3.50; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4½c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 12½ to 13c. in bulk; packages, 14c.. window glass, $1.25 per 50 feet for first break; $1 35 for second break; third break, $2.80.

WOOL.—Some further fair sales of car lots and smaller quantities of Cape wools are reported since last writing, and holders are very firm in their views. The London sales have just closed at stiff prices, and some orders cabled at last week's figures would not be filled. There is still a fair quantity of Cape wool in store in New York on Montreal account, which is being held for expected advance. We quote:—Greasy Cape, 16 to 17c.; B.A. scoured, 30 to 35c.; no Australian here; Canada pulled, 20 to 22c. per lb.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
Thos. Walmsley, Treas. Hugh Scott, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,
32 Church Street, Toronto, Ont.

A BLESSED PEACEMAKER.

An interesting story of bad blood and litigation changed of a sudden to friendship and agreement, comes from St. John, New Brunswick :

"Judge Forbes, of the St. John County Court, is making a name for himself as a discourager of litigation. His latest good deed was in settling a case between two farmers and families that had been in the courts for ten years. In 1887 there lived at Oak Point, King's County, on the river St. John, families by the name of Inch and Flewelling, who up to that time were on the most friendly terms. They used to worship in the same little school building before the present places of worship were built. In 1887 George Inch fenced in a certain spring, which created all the disturbance of the after years. George Flewelling opposed this tooth and nail, and, claiming the spring, tore down the fence. It was agreed to have the place surveyed, but after this was done no agreement could be reached, because when surveyed by two different surveyors it was found that the survey of one gave the spring to Inch, while that of the other gave it to Flewelling. The battle began anew, and one afternoon that spring was the scene of a quarrel, when Inch sought to fence on the line favorable to him, while Flewelling opposed it. Inch then sued Flewelling, and when the witnesses were coming down on the steamer a quarrel arose, which ended in one person being knöcked down, and, of course, this ended in another lawsuit with Flewelling as defendant, and Flewelling won. His case was tried at Hampton, the shire town of Kings, as was also the action of trespass. In the latter suit forty witnesses were examined on each side, and Inch won. But although Inch won he did not so readily recover the amount of the verdict. Wm. A. Beckett advanced the money for Flewelling to carry on the suits at law, taking a deed of the Flewelling property for so doing. Beckett mortgaged the property to his mother, who this month gave notice of sale under the mortgage. This stirred up Inch again, who brought up Flewelling for examination under the judgment, and subpœnaed Beckett as a witness. Inch's claim was partially reduced by payment, and now amounted to about $600. Beckett claimed $997.

Things were shaping splendidly for a big equity suit, when Judge Forbes suggested that the case be settled all round, and asked each claimant what they would take to give up their claims to Flewelling. After considerable talk Inch agreed to take $150, and Beckett, not to be outdone in generosity, reduced his claim to $535. Lawyer Barnhill was just passing, and Judge Forbes called him in, and while the iron was hot, had it arranged that Barnhill would draw up the necessary papers whereby the Flewellings would get their property back, Beckett get his amount, and Inch his, all to be concluded in ten days. But even then the judge was not satisfied. He turned to the litigants and said : "Now you must shake hands and make up friends." These old neighbors were evidently longing to do so, for the genuine heartiness of their handshake made up for all the lapses of the past years, and thus the chasm of years was bridged by the happy thought, energetic words, and kindly action of the County Court Judge.

JUBILEE PARADE STATISTICS.

London Daily News.

It will interest everybody to know the exact number of troops employed in the great pageant of Tuesday, 22nd June. It was 46,881. The horses employed were 6,808 in number, and the guns 116. To this army of peaceful demonstration the Household Cavalry contributed 807 of all ranks, and 745 horses ; the Cavalry of the Line, 3,749 of all ranks and 3,530 horses ; the Royal Artillery, 2,135 all ranks, 1,585 horses, 110 guns, and 44 wagons. The Royal Artillery also, with the Royal Engineers, contributed 1,159 all ranks, as infantry battalions. The number of Foot Guards taking part was 4,058. Twenty-seven infantry corps supplied 14,626 of all ranks. The Yeomanry engaged were 453, with 455 horses.

The militia were represented on the occasion by 5,249 of all ranks ; and the volunteers by 10,579. The colonial troops numbered 933, and furnished 393 horses. There were, besides, 144 representatives of colonial local military forces. The Royal Navy was represented by 1,401 of all ranks, and 6 guns, besides 1t0 men of the Royal Navy Reserve. There were also 165 of all ranks from H.M.S. "Britannia." The other items making up the grand total are : Army Service Corps, 184 : Medical Staff Corps, 230 ; Army Ordnance Corps, 164 ; Royal Military College, 592 ; Royal Military Academy, 169, and Honorable Artillery Company, 138.

TEXADA MINES.

Respecting the universal riches of Texada Island, which lies in the Strait of Georgia, east of Comox, B.C., the *Mining Record* for July has this to say :

Texada Island is, indeed, a veritable wonderland. By the steamer "M. Baude" the owners ot the Nutcracker claim on Texada Island, received a number of specimens from their claim, which in richness and apparent permanency eclipse anything yet received trom the far-famed Texada. The specimens were taken from the bottom of the shaft being sunk by Messrs. McCloskie & McDonald. The depth is about twenty-two feet, and the ledge opened out for four feet wide. The specimens contain flake and wire gold in great profusion and richness. The gold is of a very bright color, resembling the Australian gold in appearance and fineness. The specimens also give evidence of being rich in silver. Experts pronounce it the most valuable of the many developments of Texada Island, inasmuch as the gold is in solid rock, and not in the surface crevasses, the same as the Lorndale and other claims. They have only sunk the foot-wall, and although the ledge has opened four feet it has not yet reached the hanging wall. The lucky owners of this claim are Mrs. Edwin Gough and Robert Evans, and J. W. Stirtan.

The Van Anda Copper Queen shaft is taking out some fine rich variegated copper ore, which should, from all appearances, run high in value. The Raven mine has now got a well defined vein of payable ore, and will soon be making regular shipments. The Kirk Lake gold mines have been making extensive clearings for plant site, and erecting new buildings, and it is expected to be shortly in full swing, with stamp mill, etc. The Surprise mine is very busy erecting hoist plant, and will sink to the 250-foot level. The Silver Tip mine shipped 100 sacks of ore on the steamer "Comox" on Thursday, and the Victoria-Texada mine shipped 100 sacks of ore on the steamer "Maude" to Victoria. Ores like these from any other new camp would bring a plethora of capitalists to it.

A Minnesota syndicate has an agent here, with instructions to bond or purchase ten or twelve additional claims at once, and they will commence operations next month in several sections of the island. The above is the result of an expert's visit here in May, and his return with samples and report. The developments now under way show some remarkably rich copper ores, all carrying more or less precious metals. Some prospects show up well, and if British capitalists don't keep their weather eye open, "Brother Jonathan" will, to his own benefit.

It is reported that four claims are bonded for $60,000 to a North of England mining firm. A notable fact is that all veins so far have improved most remarkably at 100 feet depth, and the general outlook is that the island will ere long be a busy hive of workmen, as soon as a little more development work is done.

MUNICIPAL GOVERNMENT.

The wave of reform in municipal affairs which has been sweeping over our country for the past year or two, brings much joy to those who invest money in city bonds. The interest of the investor in this matter is second only to the interest of the citizen and taxpayer, and both are benefited by an honest, clean administration of municipal affairs. The watchword of the reformers, "Municipal government is business, not politics," appeals particularly to those who have money at stake. For years the hungry politicians have run the business of our city corporations for their own profit. Recklessness in expenditures, disregard of legal restrictions in borrowing money, flat dishonesty and criminal carelessness have in many cases cost investors much money and more worry. At last there seems to be developing a new public spirit, which will not stand the practices so common in the past. In many of our cities the reform has put better men into office than the citizens believed could be elected. In many others the Legislatures have been or are being appealed to for help in remodelling the charters.

The State of Ohio shows a curious example of official carelessness and disregard of consequences. The constitution provides that all general laws shall be uniform in their operation throughout the State. In order to evade this proper requirement, the Legislature has divided and sub-divided the cities of the State into classes, until in many cases each class contains only one city. This has been done by dividing on a basis of population, with the negative assistance of the courts, which have from the first refused to declare such legislation unconstitutional. From recent decisions, however, it is evident that the Supreme Court of the State would be only too glad to correct its error and reverse its decisions, if it could accomplish this without loss of dignity and disturbance of vested rights. Here is the meat of the thing for a bond holder. The value of millions of bonds would be problematical if the court should overrule itself.—*American Investments.*

CANADA REPRESENTED ON THE PRIVY COUNCIL COMMITTEE.

The *Canadian Gazette*, of London, England, says : Sir Henry Strong was sworn in as a member of the Privy Council at the same time as the colonial premiers, and took his seat as Canadian member of the Judicial Committee of the Privy Council on Tuesday, July 13th. He was a member of the committee which heard the Carew appeal (Japan poisoning case). Several interesting cases are about to come before the committee, but as in two, at least, of them Sir Henry Strong adjudicated in the lower Canadian courts, he will not take part in their hearing by the committee. The Canadian appeals are as follows :

De Hertel v. Goddard and another. Quebec. Subject : Construction of a will. Civil Code, art. 963.

The Great North-west Railway Company and others v. Charlebois and others. Canada. Subject : Whether a certain contract and consent to judgment are binding on the company.

The London and Lancashire Assurance Company v. Fleming. Ontario. Subject : Action brought by respondent as assignee of two policies.

The Attorney-General for the Dominion of Canada v. the Attorneys-General for the Provinces of Ontario, Quebec and Nova Scotia, Canada. Subject : Whether beds of lakes, rivers, etc., became, under the British North America Act, the property of the Dominion or of the provinces.

The Attorney-General for the Province of Ontario v. the Attorney-General for the Dominion of Canada. Canada. Subject : Whether beds of lakes, rivers, etc., became under the British North America Act, the property of the Dominion or of the provinces.

The Attorney-General for the Provinces of Quebec and Nova Scotia v. the Attorney-General for the Dominion of Canada. Canada. Subject : Whether beds of lakes, rivers, etc., became, under the British North America Act, the property of the Dominion or of the provinces.

The City of Montreal v. the Standard Light and Power Company. Quebec. Subject : Whether appellants can prevent respondents from breaking up streets to lay wires.

50 YEARS The Year 1897 is the SEMI-CENTENNIAL

OF THE

Canada Life Assurance Company.

ESTABLISHED 1847.

Bankers: CANADIAN BANK OF COMMERCE. | Solicitors: MESSRS. EDGAR & MALONE.

Chief Medical Referee: JOHN L. DAVISON, B.A., M.D.C.M., M.R.C.S.

Capital Fully Subscribed, at 25 per cent. premium, $1,000,000

10,000 Shares of $100 Each.

I. In 1868, the first year in which any reliable records were published, the total amount of life assurance premiums collected in Canada was $960,331. By reference to the last official returns from the Dominion Government Insurance Department it will be seen that for 1896 the total life premiums amounted to $10,604,577, and of this sum no less than $4,529,123 went to foreign companies, a serious and unnecessary drain upon the resources of this country. These and other equally important facts have led the promoters of the Imperial Life Assurance Company of Canada to feel that an institution conducted upon conservative lines, with a large cash capital, a large government deposit and a directorate commanding the confidence and respect of the public, will at once take its place side by side with the older and more successful life assurance institutions of this country. The fact that at the end of last year policies upon residents of Canada totalling no less than 132 million dollars were carried by foreign companies, indicates the room for increased home enterprise.

II. The issue of one million dollars capital at a premium of 25 per cent. places this company at its commencement in the very first rank, and by affording its policy holders and annuitants unquestioned security enables it to start with the certainty of doing a large and profitable business.

III. The insurance plans of the company will be formed on attractive but thoroughly tested lines, assuring best permanent results to both policyholders and shareholders.

Applications for Agencies will be received by

F. G. COX, Managing Director.

DECISIONS IN COMMERCIAL LAW.

THE "SOLWAY PRINCE."—The plaintiffs, with the knowledge and assent of her owners, undertook to lift a sunken vessel, under a contract with the insurers, who advanced to the plaintiffs, before the work commened, 40 per cent. of the amount for which the vessel was insured. The vessel was successfully raised, but the operation of lifting proved more costly than was anticipated, and some of the underwriters in the meantime became insolvent. In an action of salvage brought by the plaintiffs against the defendants, as owners of the vessel, the president of the Admiralty Court in England held that the contract with the underwriters, which was not dependent on success, precluded the plaintiffs from asserting a maritime lien on the vessel, and claiming salvage remuneration from her owners.

HANKS V. BRIDGMAN.—By a by-law made by a tramway company, and enforcible by a penalty, "Each passenger shall ....when required so to do, either deliver up his ticket or pay the fare legally demandable for the distance travelled over by such passenger." A passenger, having paid the fare and received a ticket, inadvertently lost it, and was thus unable to deliver it up when required. He declined to pay the fare over again, and was summoned by the company for breach of the by-law. The Court of Queen's Bench in England decided that the by-law was not unreasonable, and that the passenger ought to have been convicted.

LOWE V. VOLP.—By a by-law made by a tramway company, and enforcible by a penalty, "each passenger shall show his ticket (if any) when required so to do, to the conductor or any duly authorized servant of the company." A passenger having paid the fare and received a ticket, refused to show it to an inspector of the company, and was summoned for breach of the by-law. The Court of Queen's Bench in England held that the by-law was not unreasonable, and that the passenger ought to have been convicted. These by-laws were made under the Tramways Act, and duly allowed by the Board of Trade.

TAKING ADVANTAGE OF THE TARIFF.

English manufacturers will not be slow to take advantage of the preferential tariff now that they know they are to have it to themselves. One method by which they will expand the volume of their exports to Canada is illustrated in a circular letter which is being sent to British merchants by a prominent firm of advertising agents in London. The following is an extract: "Those firms who first take advantage of this new condition of affairs will reap a golden harvest. The exports of the United States to Canada in 1895 were $54,635,000, as against exports to Canada from Great Britain for the same year of only $31,132,000. It will be seen that, especially with the advantage of 25 per cent. off the regular duties in our favor, added to the desire of Canadians to trade with Great Britain, there is room for a wonderful increase in our trade with Canada. Our clients will, we hope, more freely extend their advertising in Canada and thus secure this trade."

Address, Nelson, B.C.

Mercantile Summary.

JOSEPH LAPIERRE, a general merchant for twelve years at St. Antoine, Que., has had to assign. He has always been reported somewhat slack in payments, and of late has been sued in a few instances.

THE president of the Dominion Commercial Travellers' Association, Hon. J. D. Rolland, of Montreal, has received through Hon. Joseph Chamberlain, the Secretary for the Colonies, an acknowledgment from the Queen of the Jubilee address forwarded to Her Majesty.

WE hear with regret of the death of Mr. Richard P. Field, of the Morris, Field, Rogers Co., at Listowel. It is stated by the Listowel *Banner* that this concern is exporting piano parts to Europe, and that it turns out more than a thousand keyboards a week.

THE surplus of the Wagner Palace Car Company for the year ending June 30th, according to an Albany paper, was $1,424,333. The annual report shows that the gross earnings were $3,436,281, and the expenses $2,011,948. This report includes the operations of the company in twenty States and the Dominion of Canada.

WE regret to learn of the embarrassment of Tees, Wilson & Co., tea jobbers, Montreal, who have called a meeting of their creditors, and will most likely abandon their estate. The firm is a continuation of the old-time grocery house of Sinclair, Jack & Co., but of late years Mr. D. T. Tees has been the only partner, and the business quite a moderate one. The liabilities are about $22,000.

LOUIS DESJARDINS, dry goods man, Montreal, who has assigned, as a result of being unable to complete a compromise arrangement made last February, now makes a very unfavorable showing. In February he showed a deficiency of $1,500 on liabilities of about $20,000; but at a meeting of creditors held Tuesday, 3rd August, he presents a statement showing at present an indebtedness of $30,000, with assets of only $14,000.

LLOYD'S register of shipping shows that the gross tonnage built during first half 1897 in British yards was 871,661 tons, against 774,012 in the corresponding half of last year, an increase of 97,649 tons. At present there is a large amount of tonnage on the stocks, representing orders for nearly all nations. Great Britain has 639,113 tons being built; Japan, 54,365 tons; Holland, 24,560 tons; Germany, 17,828 tons; the British colonies, 17,891 tons. Unfortunately, the prospects for the year are clouded by the engineers' strike, which is stopping work at many of the ship yards, and will cause new orders to be sent elsewhere.

ANNOUNCEMENT is made of the formation of a partnership by Toronto parties for the business of handling merchants' estates or investigating their affairs. The parties are well-known and competent gentlemen. Few, probably, are more widely known in Ontario than Mr. Paul Campbell, formerly of the wholesale dry goods firm, John Macdonald & Co. His associate is Mr. William Campbell, who has had the advantage of a dozen years in the C.P.R. offices in the position of accountant, and who is also favorably known in Toronto. Both are men of integrity and of strict business training, and both are hard workers. Their office, we understand, will be in the McKinnon Building. Mr. Paul Campbell will act as assignee and valuator, for which his long experience fully qualifies him, while the firm of Campbell & Campbell will undertake the duties of accountants.

THE annual meeting of the Acadia Coal and Coke Company was held last week in St. John. Mr. J. D. Chipman, St. Stephen, and Messrs. F. P. Thompson and W. T. Whitehead, Fredericton, came to the city to attend the meeting.

AMONG trade items from the Maritime provinces we hear that H. R. Shaw, dealer in hardware, Bridgetown, has sold out to N. W. Benson; also that W. E. Nickerson succeeds the late W. Crowell as a general dealer at Shag Harbor. Splane & Johnston have registered a partnership as ship chandlers in St. John, N.B. T. B. Smith, builder, New Glasgow; G. E. Eaton, general store, Cannington, and L. P. LeBlanc, of the LeBlanc Mfg. Co., manufacturers doors and sashes, are dead.

FOR the week Montreal city furnishes the following small list of small failures: A demand of assignment has been made upon Joseph Soucisse, a hay dealer.——Arthur Peltier, a tailor owing about $900, is reported to be in financial difficulties.——T. Geoffrion & Co., making boots and shoes in a small way, have assigned, fyling liabilities of $3,768.——S. Soupin, grocer, has assigned.——Narcisse Desnoyers and J. O. Clement, two suburban grocers, have assigned, with small liabilities in each case.——Alexandre & Lefebvre, bicycle agents, etc., have made an assignment. After a few months' business existence, Alexandre is reported an absentee.

THE British Association visitors need not go away without a notion what our Canadian woodland and small lake scenery is like. The local committee has on its programme a trip which it is expected some 250 of the scientists will take, namely, via the Grand Trunk Railway to Penetanguishene, and thence by boat to Parry Sound. Ottawa will be the next point of destination, per Ottawa and Parry Sound road, with a lunch at Algonquin Park en route. The excursionists will reach Ottawa on Friday evening, August 27th, and will be entertained to dinner. On Saturday morning they will view the sights in the city, and at 2 p.m. leave for Montreal.

IN last week's issue of THE MONETARY TIMES was a paragraph referring to the failure of C. H. Gerbig, of Ayr, and in it was the following statement: "In September last he found it necessary to mortgage his stock for $6,200, and in April this year placed another mortgage for $4,000. . . . These mortgages have been foreclosed," etc. Mr. Gerbig informs us that in April this year he paid $2,200 on account of the mortgage given in September for $6,200, and gave a new mortgage for $4,000; so that instead of there being $10,200 due, as the former statement would lead one to infer, the total mortgage liability is $4,000 to-day.

THE Mercantile Syndicate Company, of Ottawa, was incorporated in January, 1896, with the object of dealing in bankrupt stocks and for general trading purposes, with an authorized capital of $100,000, of which, it is understood, about $18,000 is paid up. The company now seeks an extension of twelve months, secured.——Kenny Bros., an Ottawa tailoring firm, with a favorable business record extending back some 12 years, have communicated with their creditors, through their lawyers, offering a compromise of 30 cents. Some of those interested are not favorable to the proposition, and an accountant has been instructed to investigate their affairs.——J. McKinstry, of Ottawa, formerly a livery stablekeeper, but for the last year or two dealing in bankrupt stocks, is reported to be asking a compromise.

Mercantile Summarv.

THE representative of the Chambre de Commerce on the Montreal Board of Harbor Commissioners is now Mr. Contant, who succeeds Mr. L. E. Morin.

IT is stated by the *Commercial* that the attendance at the Winnipeg Industrial Exhibition was 42,000, which was 12,000 more than ever before. These figures represent the total number of paid admissions at the gates.

THE authorities of the Richelieu & Ontario Navigation Company are discussing with Mr. Frank Kirby, the nautical designer of Detroit, the dimensions of the two lake steamers they propose to build.

A PHILADELPHIA despatch of Wednesday last states that the Phoenix Bridge Company, of Phoenixville, Pa., has closed a contract with the Ottawa and New York Railway Company to build a bridge over the St. Lawrence River at Cornwall, Ont. The bridge will be about a half mile in length. It will be ready for traffic in November.

THE builder of the Newfoundland Railway, Mr. R. G. Reid, left on Friday last by the "Coban" for the west coast of the island, where the road is fast approaching completion. Some two thousand men are engaged, and the new Clyde-built steamer "Jubilee" will begin her trips between Sydney, C.B., and Port au Basque by the end of August.

WITH a good deal of foresight the Hartford *Times* perceives that: "So long as the retail price of the bicycle remained at a figure which made it possible for any mechanic with a bench and a bag of tools to buy the different parts of a machine, put them together, and sell the finished product at a good profit, the multiplication of small bicycle factories was bound to continue. Now the time has come for them to quit The bicycle business is likely to follow the same course as the sewing machine business."

THE following trade items may prove of interest to the business community, especially to the wholesale trade which has dealings with the parties mentioned: The Waterloo Produce Co of Waterloo will continue business under that name, but Hogg and Habbick have retired.——We regret to chronicle the death of Mr. R. Woodhouse, hardware merchant at Fort William.——Archibald Sharpe is going to retire from business in London, and is disposing of his stock of dry goods.——The Ottawa hardware firm of McDougall & Cuzner is being dissolved, and hereafter will be conducted by John Cuzner.——A Frenchman named P. Rochon is commencing business in Ottawa, and will sell anything from a frying pan or ash sifter to a silk dress. In other words, his is intended to be a full-fledged departmental store. We won't say that we wish him success.

IN addition to what was said last week in this column about the effect of continued rains on the fields in Ontario, we have the following from Quebec sources: The Richmond *Guardian* says: "The hay yield turns out better than the most sanguine of farmers expected. It will be a good average. The growth has been wonderful during the last fortnight. Even on the patches that were winter killed there is a moderate growth. We heard yesterday of a field from which 27 loads were cut, in place of 14 loads last year, and we believe this is not an exceptional case. The quality also is good, and great progress has been made in getting it in." The Montreal *Gazette* of Monday last says: "The fifty and odd hours' downpour on Tuesday, Wednesday and Thursday has caused considerable havoc to the crops of Eastern Ontario. In the neighborhood of Cornwall and St. Andrew's the hay crop has suffered extensively, a great portion of that which was cut and awaiting hauling being completely spoiled. The ditches are not only filled with water, but in many instances are overflowing. Large tracts of land are under water in the lower lying districts, and the crops, if not submerged are simply in a swamp and are ruined."

IN Dun's Daily Bulletin of 4th inst. appear the following: The Canadian Calcium Carbide Co., Limited, is applying for incorporation at Montreal.——Mr. J. Collette is sole owner of the Montreal commission house trading under the name of Joseph Collette & Co.——The Empire State Watch Co., Montreal, is the style of a new co-partnership.——The Forsyth Granite and Marble Co. is applying for incorporation at Montreal.——Miss Margaret Taylor is trading under the name of Homer Taylor, in railway supplies at Montreal.——Mrs. J. Friedman is sole owner of the clothing business operated under the name of J. Friedman & Co., at Montreal.——Mrs. A. J. Dubuc is sole owner of the St. Hyacinthe Vinegar Works at that place.——The firm of H. & F. D. Swim, operating a planing and lumber mill at Doaktown, N B., have had the misfortune of being burned out, and the double misfortune, if it be proper to call it so, of not being insured. This firm also has a general store in the same village.——Edwin Butler is successor to the general store business of E. G Butler, at Chester, N.S.——At Glace Bay the dissolution has been registered of the dry goods firm of McNeil & McKinnon.——J. R. B. Smith & Dufresne is the style of a wholesale millinery firm in Montreal, of which Mrs. J. R. B. Smith is the sole owner.——Neepawa, Man., is to have a new general store, which will be conducted by A. R. Graham and Jas. Kerr. This is one of the towns in Manitoba where a representative of THE MONETARY TIMES was told last year by a good merchant that he would rather have the trade of Toronto's departmental stores in Neepawa than his own.——O. Anderson is opening a drug business at Regina.——Turner & Co. have bought out the Winnipeg Music Co., Limited, at Winnipeg.——James McCreath has bought out E. J. Ritchie's hardware business at Nelson, B.C., and after this the business will be known as The Nelson Hardware Co.——The following item comes from Meductic, N.B.: Lounsbury & Porter have dissolved partnership. Bruce Lounsbury retires and Jerome Porter is admitted as a partner, and Porter Bros. is the style of the new firm. Theirs is a general store business.

Mercantile Summary.

THE former consul of the United States in Halifax, Mr. D. H. Ingraham, left that city on Saturday night last, taking with him good wishes and pleasant recollections. His successor is Mr. John G. Foster, of Derby Royal, Vermont, 38 years of age. Mr. Foster is a graduate of Tuffts College, a lawyer by profession, a bank director, and has been a member of the Vermont Legislature.

SEVERAL items of interest come from Seaforth this week. A bicycle firm, Arnold & Hare, have given up business. W. Sadlier, grocer, is moving to London, and John Way, who has been selling shoes there, has closed up.——M. Guindon has ceased selling liquors at Windsor, but in the future will deal in wines at Sandwich.——J. E. Vollans is looking for some one who will buy his cigar business at Windsor.

CANADA last winter adopted, says the Detroit *Free Press*, a very strict alien labor law, and agents are now being appointed and instructed for its enforcement. Its inception was in the Lodge Corliss bill, which failed of enactment. "Thus the efforts of Mr. Corliss, while proving futile to further protect American workmen against Canadian birds of passage, have resulted in closing Canada to American laborers."

MONTREAL butchers, who are compelled by law to do all the slaughtering of their animals at the abattoirs, are put into an awkward fix by the burning of the eastern abattoir, L'Union The Union des Abattoirs was notified yesterday morning by the city that it would have to provide temporary accommodation for slaughtering at once. Meantime the insurance on the buildings goes to the city as security for the Union's debentures.

A QUEBEC paper tells of a large transaction in mining stock in Montreal on Monday last, Mr. S. H. Miner, of Granby, having purchased a block of the Old Ironsides treasury or development stock for $20,000, the first payment also being made. The property, which is located in the Greenwood Camp, Boundary district, B C., is now controlled by Mr. Graves, Mr. Miner and Mr. White. The machinery is being put in, and the work of development is to be vigorously pushed forward.

THE output of the several collieries of the Dominion Coal Company from 1st to 17th July was 100,819 tons, and the shipments 92,685 tons. Of the total quantity shipped no less than 75,000 tons found its way up the St. Lawrence. There is a good demand for coal in Montreal, the agents of the company being desirous of receiving 30,000 tons per week for some time to come. The Stellarton *Trades Journal* says: "Prospects of work at Gowrie have improved somewhat of late, and it is hoped that work there will be brisk while the shipping season lasts, Work at all of the collieries at the present time is fair."

IT may be remembered that a new industry in St. John was announced when the St. John Railway Company decided to put in a plant for the manufacture of sulphate of ammonia. Machinery was purchased and men employed, and there were great expectations. But now, after the expenditure of a large sum of money, however, it has been found that the manufacture of the article was too expensive to be profitable and the company decided to abandon it. The men have been discharged and the plant is now idle. Probably sufficient enquiry into the processes of the industry and their cost was not made beforehand.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT"

By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

MR. JEAN TACHE has resigned his position as manager of the Quebec agency of the People's Bank of Halifax, and his resignation has been accepted.

THE second annual exhibition of the Dominion Furniture Association is to be held in Toronto from the 30th August to the 11th September.

FOR ten years has Joseph Fee, jr., been selling groceries in Toronto, but on Thursday of this week he made an assignment to E. R. C. Clarkson.

THE office of the Imperial Bank in Rat Portage has been moved from the old quarters in the Hilliard House block, to the new Robinson & Brydon building in that town.

A WAIL comes from some British cities because of the United States new tariff. The Dundee jute trade, and the Glasgow trade in woolens, chemicals and thread will suffer.

THERE has been a dispute of long standing between the town of Kingsville and the Natural Gas Company, which has been supplying the town for years. This dispute has been settled by the town buying out the plant of the company for $27,000.

AT noon on Wednesday the tannery of the Moseley Shoe Leather Company at St. Hyacinthe, Que., took fire, and in an hour or two was beyond saving. More than two hundred hands are thus thrown out of employment. The loss is said to be covered by insurance.

FROM western Canada we hear that Thos. Howell, who has a tailor shop in Kamloops, B.C., has assigned. At one time he carried on trade in Vancouver, afterwards removing to Victoria, where he met with very little success. It is said of him that he is a close student of political economy, and an ardent single-taxer.

WORD comes from Ottawa of the application for a Dominion charter by a company which is to carry on the manufacture of calcium carbide. Its capitalization is $11,000,000, and the Hon. A. G. Blair, Rufus Pope, M.P., and a lot of Canadian and American capitalists are among the applicants.

A HUNDRED thousand dollars a month is the average amount of the Montreal Street Railway Company's earnings since September last. The aggregate for the ten months, October to July inclusive, is $1,081,366, as compared with $1,011,597 in the corresponding months of 1895 and 1896, the gain being $69,769, or at the rate of say $230 per day.

NUMEROUS have been the business troubles of A. E. Williamson, a Midland tailor. He started in 1887, assigned in 1891, and afterwards effected a compromise: suffered a fire loss in 1895, after which he made an assignment, the insurance money going to creditors, and since then has tried to pull up, but having met with ill success, he has again assigned.

THE estate of John Jewell, harness, etc., Sturgeon Falls, has made an assignment.——Allan P. Boag has operated a small foundry at Wroxeter for some ten years. Business has been dull for a long time, and now that his father has entered suit for money loaned him, he sees fit to assign.——J. A. Courtice, druggist, Havelock, and C. M. Deverell, general dealer, Ravenshoe, have assigned.

We gather from the August circular of Messrs. Æmilius Jarvis & Co., that during July letters patent have been issued incorporating the following companies: The Gold King Mining Company, of Toronto, Limited, capital $2,000,000; The Eureka Gold Mining Company, Limited, capital $199,000; The Soo Mining and Exploring Company, of Algoma, capital $99,000. These are all $1 shares. The Oriole Gold Company, of Wabigoon, Limited, capital $24,000, $30 a share.

J. C. SMITH was sole owner of the Seaforth banking firm of J. C. Smith & Co, whose assignment we record. Before starting this business, in 1888, Mr. Smith was in the service of the Bank of Commerce. In commencing his late venture he was backed by a prominent Seaforth merchant, but for some time past the latter has had his own hands tied by troubles in his business, and Smith being unable to get along unaided, has assigned.

IN the matter of the John Eaton Company an order for the winding-up of the concern was granted on Wednesday last by Mr. Justice Robertson. This order was made on the application of James Parker, a creditor, through Messrs. Reid, Taylor & Bayne. E. R. Clarkson is appointed interim liquidator. This decision renders the assignment to Mr. Clarkson invalid, and will mean a full and searching enquiry into the affairs of the estate.

MR. CHALONER estimates that 15,000 people inspected the mining exhibit at the Winnipeg fair last week. The interest manifested is indication that the general public are not forgetful of the mineral resources of Northwestern Ontario. The C.P.R. officials telegraphed from Montreal to have the Rat Portage exhibit sent to the Toronto and Montreal fairs. The company offer to transport it free, and after the fairs will show it in the exhibition car which is to travel through the States during the fall and winter.

A DECISION has just been rendered in the appealed case of the city of Montreal against the Standard Light and Power Company of that city. The Lachine Rapids Hydraulic and Land Company, which obtained a controlling interest in the Standard Company, made excavations preparatory to laying conduits in the city under the latter's Act of incorporation. The city objected and sent a squad of police to prevent the men digging. A legal injunction was secured enjoining the city. The matter has been carried to the Privy Council and the company succeeds.

IT has been stated on the street that the holders of Canadian Pacific common stock were likely to be given a half-yearly dividend of 1½ per cent., the same to be declared at the board meeting on the second Tuesday in August. Well, the second Tuesday in August will be next Tuesday, and we shall see. The price of shares has advanced from 46 in April to 72½, and an advance is justified by the returns for the last six months. The net increase in the receipts for the six months ending June 30 reaches 558,000 over the same period of last year.

MUCH sympathy will be felt for Messrs. Robert Linton & Co., wholesale dry goods dealers, Montreal, in their troubles, which have led to their decision to liquidate the business. They are to meet their creditors in consultation a fortnight hence. The house is one of the oldest in the Montreal trade, Lord Mount Stephen having been connected with it in its earlier days; and afterward, as Robertson, Linton & Co, the late Andrew Robertson, for many years chairman of the Harbor Commissioners, was head of the firm. The present firm has been seriously crippled by failures among its customers during the past two year and of late have been buying comparatively lightly in view of some probability of the present determination. The bulk of the liabilities are understood to be due to Lord Mount Stephen and family connections.

We have to report the embarrassment of M Lefebvre & Co. large vinegar, pickle and jam manufacturers, who have consented to assign on the demand of A. W Papillon, who has been named provisional guardian. The affairs of the firm have been in unsettled shape ever since the suspension of La Banque du Peuple, two years ago. The bank held a claim of some $400,000 against them, which was eventually settled by the transfer of a large amount of real estate held by the firm, and other assets, but this left them in very much crippled shape, and they have been working along at serious disadvantage ever since. The present liabilities will probably reach $200,000.

Abbs & McClive, grocers, Niagara Falls South, have made an assignment to G. E Buckley of that place.——The town of Mattawa furnishes two failures for us to record One is that of a shoemaker named John Fleurie, the other that of T. G. Porter, a publisher. ——A small failure is reported from Dresden. Wm. Smith sold his harness business there to Thomas W. Sims about a year ago, and now Sims has gone to the wall.—— G H. Matthews, who has been in the livery business in Hamilton since 1885, has had to assign, although lately reported worth three or four thousand dollars. — One of the oldest merchants in Newmarket has had to make an assignment. This is Charles Lundy, a general storekeeper and grain dealer, who has handled lime and coal. About three years ago he became involved through the Novelty Mfg. Co. He also endorsed some outside notes, the forced payment of which helped to cripple him Then he gave two chattel mortgages on his assets.

SOME ONTARIO MINING NOTES.

"What need to go to Klondike for gold?" is the heading of an item of July 30th from Rat Portage. And it goes on to describe "a panning" of decomposed rock brought from a small island in Big Stone Bay, near Hay Island, assaying from $25,000 to $30,000 to the ton of matter. The island contains about an acre, and is composed of decomposed quartz highly oxidized, and other glacial debris. It is added that Mine Centre is to the front again. Word has just reached here that a twenty two ounce nugget has been struck on the two hundred foot level of the Foley mine.

Here is a little group of mining items taken from the *Miner*: Mr. Wm. Caldwell has gone with a crew of eight men to start development work on Cameron Island in Shoal Lake. This property was bought by Messrs. J. J. Foster, Burdell and Green, of Toronto, and Wm. Caldwell, of Rat Portage, for $15,000. On the island are three veins, all of which pan gold.

Within four days [last week] no less than 68 men have been hired in Rat Portage and taken out to work on different mining properties in the district. A car load of mining machinery, composed of four batteries, and accompanying twenty stamps, have arrived by the C.P.R. for the Sultana mine.

Hon. George E. Foster, president of the Ottawa Mining and Milling Co., which is erecting a customs stamp mill at Keewatin, arrived at the Portage yesterday morning. Mr. Wm. Peters, a well known mining man of twenty years' experience, and late manager of the Empress mine, left this morning, 31st July, to take charge of the newly erected stamp mill at the Mikado. He expects to begin crushing within three weeks.

THE BRITISH ASSOCIATION.

The scientists are coming, and in strong force. The list published in the Toronto *Mail and Empire* contains an array of distinguished men even to see whom one's curiosity might well be piqued, and to hear whom, whether in conversation or in lecture, would be a privilege. We observe with pleasure that the presidents of the leading American universities, notably Johns Hopkins, Princeton, and Chicago, are to be present, while Yale, Harvard, Cornwall, Lehigh, and several others send professors. Passing by the names of scores who are well known on this continent or in Europe, or both, in medicine, chemistry, geology and other fields, we will give our readers a short list of members of the British Association who are possibly better known in commerce and finance.

There will be J. Scott Keltie, librarian of the Royal Geographical Society, and editor of the Statesman's Year Book; Angus McLean, Ph.D., Professor of Electrical Engineering in Glasgow University: Alexander Siemens, the metallurgist; W. H. Preece, the electrician; Prince Krapotkin, the Russian economist; H. S. Maxim, of Maxim gun fame; Edward Atkinson, the Boston publicist, insurance man, and statistician; S. P. Langley, of the Smithsonian Institute at Washington; Professor Bovey, Dean of McGill University, Montreal; James Bryce, author of "The American Commonwealth"; Prof. Fittica, of Marburg, Germany; Professor Charles Richet, of Paris; Richard Gowing, secretary of the Cobden Club; besides representatives of the London *Chronicle* and of the *Daily News*. The occasion of this meeting of the British Association will be a memorable one for Toronto, and we shall be surprised if other Canadian cities and towns do not send many of their citizens to welcome and to hear the men who are at the top of the tree in their various professions.

TORONTO STOCK TRANSACTIONS.

Bank of Commerce, 348 at 128¼-129½; Imperial, 28 at 186¼; Dominion, 236 at 235⅜-236; Standard, 42 at 170-170¼; Hamilton, 2 at 166; British Amer. THE SITUATION.

American critics of the policy of our Government in the Klondike forget one thing, when they speak of the royalties put on the production of gold, as if they were specially aimed at Americans. It would be well for them to bear in mind that these royalties, whether high or low, good or bad, affect alike all producers of the yellow metal operating in that region. There is no discrimination against Americans, no immunity for British subjects, no favors for Canadians. This is in marked contrast with the policy of the United States towards foreign miners. In the mines of the Republic foreigners have no rights, unless they have taken the first step towards renouncing their allegiance and becoming American citizens. It deserves to be mentioned, to the credit of public opinion in the Republic, that the practice is better than the law, the latter being to a large extent a dead letter. As a matter of fact, foreigners are not unfrequently allowed to exercise their industry as workers in American mines, on their own account. Still the rule of law is exclusion of foreigners, except as hired servants of Americans.

In the new American tariff the spirit of exclusiveness crops up unpleasantly. With what duties Congress elects to put on we have nothing to do ; that is a purely domestic affair. But when Congress claims the right to favor Americans working in our woods, getting out timber, by discriminating in favor of their product and against our own, the contrast of the favor with the disfavor is specially ungracious. The effect is to give certain Americans rights in Canada, through the home connection, which Canadians do not possess. The discrimination ill accords with the comity of nations, and is a challenge to reprisal which we should be sorry to see our Government reduced to the necessity of accepting. The people who thus treat Canada ought, for very shame, to refrain from objecting when we make a mining regulation, which they are not expected to like, but which applies with equal force to both British, including Canadian, and American miners, working the Klondike placers.

Some of the reasons given protesting against the Klondike royalties are that Americans discovered the gold there, and it is pretended that Canada is copying the bad practices of the Transvaal Government, which caused the Jamieson raid. An American miner may have discovered the richness of one of the Klondike placers ; but the discovery was in Canada, and he cannot complain of the treatment he receives at the hands of our Government when he is permitted to work the rich diggings on the same terms as Canadians and all other British subjects are required to observe.

If this is an unsuitable time of the year to start for the Upper Yukon, it is not because winter mining is carried on at a disadvantage, but because of the difficulty and danger of reaching there before the frost has set in. Winter is the best season for mining there, the only enforced cessation from working the placers being when water is on the surface. There is some danger, too, that a larger number of persons may arrive than can be provided with shelter and food, how well soever they may be provided with the means of paying for these necessaries. The extent of the rich placers is as yet quite unknown, but it is probably large. Inspector Strickland, of the Mounted Police, who has been two years in the country, knows what he speaks of when he says he has seen a single pan of earth yield $595, but his estimate of 2,000 to 3,000 square miles of rich placers is a mere guess, of no value whatever. All placer mines have hitherto been found exhaustible, and we are not warranted in assuming that past experience is here going to be reversed, except so far as we see it in actual course of reversal. Some miners profess to know where the mother lode is to be found, and others are going in search of it. When it is found beyond question, scientific mining, calling for large amounts of capital for its prosecution, will be in order. Meanwhile it is safe to distrust Klondike schemes which run into the millions.

Suddenly, after the interview between the colonial Premiers and the Secretary of State for the Colonies, Mr. Chamberlain, came the asked-for denunciation of the British treaties with Germany and Belgium. The news that notice of the termination of the treaties had been given was received in England with an unwonted approach to unanimous approbation. Canada, the original mover against the treaties, is also practically an unit. For years, both political parties had advocated the course now taken. Belgium meets the inevitable with resignation, but Germany frets and foams in an unseemly way. Belgium, it is said, will seek to obtain a new treaty with Canada, while, if we believe the prophets, Germany may set her wits to work to invent some scheme of retaliation. Retaliation for the exercise of a right which the treaty itself contained, the right to terminate the treaty after a year's notice ! The first rule for dealing with economic arrangements is to keep your temper ; and the Germans, as a people, have too much good sense long to permit notions of retaliation, which are wholly misplaced, long to interfere with her interests.

In the opinion of some people the denunciation of these treaties means far more than appears on the surface ; nothing less than the general abandonment of the "most favored nation" clause in all existing treaties. So far as can be seen, at present, there is no warrant for this assumption. The theory is that preference is to take its place. This would be the practical adoption of the view of the Fair Traders. It remains to be seen whether England is prepared to make an experiment which amounts to an economic revolution. In upholding the denunciation of these treaties the Cobden Club practically assents to the Fair Traders' view of using special means to attain a given end. Sir Wilfrid Laurier, who has received the gold medal of the Cobden Club for his practical contribution to free trade, is prepared to extend the schedule of the Franco-Canada treaty, and it looks as if he might succeed. If Belgium can offer us a good commercial bargain, we should be foolish not to accept it.

Recent news from South Africa puts a new face on the attitude which the Transvaal has, in the past, assumed towards the British possessions in that part of the world. One story is that arms bearing the mark of the Transvaal Government have been found in the hands of rebels in Bechuana Land. How did they get there ? Was there an innocent way for them to travel so much out of their latitude ? It sometimes happens that governments sell discarded arms ; and this, in ordinary cases, is permissible. But the Boer Government was under obligations not to furnish arms to the native enemies of Great Britain, so that the plea of the justifiable sale of discarded Government arms would not here avail them. These arms, it is alleged, were furnished to the natives before the Jamieson raid, as well as after. If the first of these statements be true, it would have justified the invasion of the Transvaal, not in an irregular way, but by British troops, acting with the authority of Parliament and the Crown. The other story is that members of the Boer Government took bribes from the Johannesburg Reformers to the extent of £55,000, presumably paid to avoid prosecution for conspiracy in connection with Jamieson's raid. That the Boer Government is corrupt was no secret before this alleged revelation was made. It remains to be seen whether these stories will be corroborated.

That the promoters of the Canadian fast Atlantic line of Atlantic steamers have failed to make good their undertaking, or that they are bound to fail, is among the late cable items. Predictions to this effect, from the first, came from rivals, whose hostility was carried to the verge of permissible antagonism. Later on the statement came that the British Admiralty had rejected the turret deck, on which the promoters had decided, and it was said that an alteration of the design would be accompanied by a demand for a large addition to the subsidy agreed upon. Now comes the story of failure, not positive, creating the suspicion of the wish being father to the thought. From these statements it would not be safe to reach a positive conclusion. But so much smoke may possibly conceal some latent fire.

The Dingley tariff law is said to be the first ever passed in the Republic which professed to be something more than an instrument for the raising of revenue ; the title of the Act declares that one of its objects is "to encourage the industries of the United States." American constitutional lawyers have from first to last often expressed the opinion that Congress has no power to impose a tax for the purpose of protecting or encouraging industries. Judge Cooley is quoted as saying that such perversion of the taxing power, when made by individual States, has, whenever questioned in the courts, been held to be unconstitutional. The broad ground of numerous decisions to this effect has been that the limited powers of taxation had been exceeded. And those of Congress are not infinite. Protective tariffs, in the past, Judge Cooley thinks, have escaped a declaration of nullity only because they have not been subjected to judicial test. Where the professed design of Congress was to collect revenue only, the courts have refused to permit the tariff to be judicially questioned, but now, in declaring an additional object of the new tariff, this immunity from attack can no longer be counted on. If the declarations of party platforms and stump orators count for anything, it would be easy to supplement the evidence volunteered in the title of the Act. If the new tariff is found to be legally assailable, it is pretty sure to be assailed.

LUMBER LEGISLATION IN THE UNITED STATES AND CANADA.

Mr. John Bertram presents an alternative plan to that previously proposed of an export duty on Canadian saw-logs. What he proposes is that the Ontario Government should make a regulation requiring logs cut in the province to be manufactured here. He points out the danger of an export duty, that "it would be immediately followed by the retaliatory clause of the Dingley bill" going into operation. This should, we think, be decisive against retaliation.

The substitute which Mr. Bertram offers is not entirely free from difficulty. The Americans who purchased timber limits here did so with the right to export the logs or manufacture them in Ontario, as they might think fit, and this right has been continuously exercised ever since, but it might have been otherwise, for the regulations under which they purchased contained a "condition that the said licensee or his representative shall comply with all regulations that are or might be established by order-in-Council," relative to the cutting of timber. Mr. Bertram, while quoting this reserved power, does not recommend its exercise. To exercise it, might, he thinks, have an arbitrary look ; and he would prefer to see special power given to the Government by an Act of the Ontario Legislature, making the necessary alterations in the Crown Lands Timber Act. The distinction here made is a weak point in the scheme. If there be an objection to proceedings by order-in-Council, it is difficult to see why it would not apply with equal force to proceedings under an Act of the Legislature. The matter of form is secondary. In fact, there are solid reasons for proceeding by order-in-Council, if at all, provided there is no doubt that the American purchasers had full knowledge of the existence of this reserve of power in the Ontario Government when they purchased. We must keep faith with the foreign purchasers of timber rights in Canada. The presumption is that they did know, and on the supposition that this is the fact, we have a right to hold them to their bargain, while the exercise of new legislative powers might raise questions of the respective rights of the two parties to the transaction.

But this is only a question of methods ; the wisdom of the proposed proceedings, in any form, is another matter. One good the suggestion of legislative action will bring : it will give time for the natural indignation which is felt at the tactics of Congress to cool down, Before the next session of the Ontario Legislature something may occur to render the proposed measure unnecessary or undesirable, and in this way a step which might lead to serious complications may be avoided.

If Mr. Bertram's politic suggestions should have the double effect of tending to diminish the demand for an export duty, and to delay all action on the subject till the next session of the Ontario Legislature, we are free to confess that, in our opinion, he will have rendered a valuable service to the public. Powerful interests have backed the demand for export duties, and the provision of the Dingley tariff, as we have elsewhere remarked, is irritating; but the question is eminently one on which statesmanship should have the last decisive word.

A WESTERN DEVELOPMENT.

In May last year, the representative of Japan in the Dominion told The Monetary Times that his countrymen were learning to eat "European food," namely, white bread, butter, and cheese, instead of fish and rice, which had so long been the subsistence of their forefathers. And he foreshadowed a great trade for Canada in flour and dairy products for Japan, if Canadians chose to look after it. Now we hear of a gentleman from Montana who, being interviewed abroad by a Chicago paper, makes the statement that within a few years the entire surplus wheat product of the northern tier of States west of the Mississippi and Lake Superior will go west instead of eastward—across the Pacific instead of the Atlantic He says that the five hundred millions of China, Japan, and Korea are being educated into bread-eaters, and are gradually discarding rice and beans, which have formed the chief article of their diet heretofore. This conversion is going on quite rapidly in more progressive and enlightened Japan, with its forty millions of a population, but more slowly in China, whose people are more conservative.

We know that a considerable trade in flour is already done with Japan and China by American ports on Puget Sound. The Winnipeg *Free Press* understands that nine vessels are now regularly employed taking flour over and bringing back tea and silk, these vessels being mainly owned by Japanese. It is said that these nine vessels will next year be trebled in number, mostly British, and consisting of old Atlantic liners made over for the Pacific trade. This sudden expansion would seem to be owing very largely to the efforts of Mr. James J. Hill, of the Great Northern Railway, who has had agents traversing all parts of China and Japan to introduce flour and to convert the people to the use of it. Further, we are told in the same connection, "during the last winter and spring, there have been four monster mills erected at Seattle, North Yakima, and Spokane Falls to grind wheat for the Japanese and Chinese trade." We had never before heard of these truly monster mills, but they are "to be completed in time to grind this year's crop, and will have a capacity to consume all the wheat grown in Washington, Oregon, Idaho, and North Dakota. Nearly all this wheat heretofore has gone east, and the cars carrying it have come back empty; the trade between China and Japan is expected to reverse this order of things." The whole story may be exaggerated, and, indeed, it sounds very like an exaggeration, but, in the opinion of the *Free Press*, there is something in it which merits the attention of Canadians. Thus:

"No doubt, however, the fleet is being enlarged, and it is being done on the expectation, founded on an intelligent comprehension of the conditions, that this trade is on the eve of very considerable development. And herein lies the interest to Western Canada. If the wheat of the States lying across the border is to go westward, so will ours. The same law will operate in both cases. A Chinaman will as soon eat bread made of Canadian flour as of American flour; if a Chinaman of cultivated taste and nice palate, he will prefer the Canadian. If, therefore, there is to be a large demand for wheat flour, the product of Manitoba and the Territories will find as ready a market in these countries as that of our neighbors. This is the present point of interest, and those whose business it is to regard it will doubtless give it their attention. But there is also a point of very great future interest. For several years past the world has been growing more wheat than it could consume, and hence the fall in prices. The limit of the world's possible production has not been reached, but it is doubtful if present production will increase to any very great extent in excess of increase in population. The conversion of those millions of Asia to bread-eaters will mean an enormous increase to consumption, and that in turn will mean an increase in price."

Supposing that trade in American cereals for consumption by these Oriental people grows at the rate above predicted. Or even if we make very large allowance for inflated hopes of people of the Colonel Sellers order, there is yet enough known to warrant the belief that there is a great flour trade to be done with Japan. If the United States railway men and millers—people who, as a rule, are not visionary—think themselves justified in making preparations on a vast scale for a future trade of this kind, is Canada not justified in looking after it too? Unquestionably she is; Canadians have the wheat belt in Manitoba and the Territories, within which wheat is equal to it in average quality. The Japanese is raised the best wheat in the world. No American want the best flour for their army and navy—this was shown when they insisted three years ago on being supplied, by a San Francisco contractor, with flour branded O-G-I-L-V-I-E, which he assured the Japs was "Oregon flour: finest in the world." But the public men of the Flowery Kingdom have since learned that the San Francisco man lied, and that the so-called Oregon flour was made by Canadian mills, from Canadian-grown wheat. We go farther, therefore, than the *Free Press*, and say that in the event of any really great development of this Pacific export of north-western wheat or flour, it will be Canada's own fault if, possessing the advantages she has, she do not eventually transact the bulk of it.

OUR BUTTER EXPORTS.

Are Canadians gaining a place in the butter markets of the United Kingdom? The shipments of butter from the port of Montreal to July 24th, 1897, amount to 33,217 packages, as compared with 18,237 packages to date a year ago. Although these shipments do not make a very large aggregate, they indicate increase, and the conditions of the market point to additional gains during the year. The provision which has been made by the Government for cold storage facilities, both by water transport and by rail, must give Canadian dairy exporters considerable advantage over their competitors in the United States. Freight rates are also in favor of the Canadian butter merchants. The New York *Journal and Bulletin of Commerce* of recent issue, says:

"The ocean freight rate from Montreal to London is

30s. per ton in refrigerator, while the rate from New York is 75s., either via Southampton or Liverpool. The Canadian shipper therefore has an advantage of 45s. per ton in the matter of freight alone, while at the same time he has much more refrigerator space at his command."

The creamery butter of Canada already commands higher prices in the English market than that of the United States. The following quotations are taken from the circular, dated July 10th, of a prominent Liverpool importing house, and indicate the position of Canadian creamery butter abroad :

	Per Cwt. Shillings.
Fancy Canadian Creamery, new separator, boxes	85 to 88
" United States Creamery, new separator, boxes......	82 to 84
Danish Creamery, firkins............................	92 to 98
Irish Creamery, boxes..........	88 to 90

The Canadian creameries have now, as a rule, adopted the square 56-pound package, which has contributed so much to the success of the Australian butter trade. Exporters favor this package, and all dairymen who intend to make butter for the British markets should use it. The laws recently enacted in the United States against the manufacture of oleomargarine should increase the consumption of butter there and lessen the quantity going forward from American ports to the United Kingdom, to the advantage of Canadian exporters.

The development of the butter trade will in various ways benefit the cheese industry. A large number of factories, especially in the Province of Quebec, have been fitted with plant for both butter and cheese-making. Should the cheese market become depressed these factories are ready on a day's notice to turn their milk into butter and are thus prepared to take the fullest advantage of the frequent changes in the foreign markets. It is estimated by Government authorities that already this season the increased value of the dairy products sent from Canada to Great Britain has amounted to $600,000. In a number of ways the Canadian cheese and butter makers, however, continue to show carelessness. Few of the factories are equipped with cold storage facilities. It is estimated that a suitable cold storage chamber can be built for $100 ; while most of the factories have at hand in the winter an abundant supply of ice. Within the week several shipments of dairy products were refused in Toronto, on account of deterioration, which could easily have been obviated by an arrangement of this kind.

ELECTRIC ENERGY IN MONTREAL.

Consideration of the future of electric lighting, heating, and power-furnishing is suggested, or rather let us say, compelled, by the announcement from Montreal this week that the company which is to use the current of the Lachine rapids of the St. Lawrence for its motive power offers to supply that city with electric energy in various forms, at a price from one-fifth to one-third less than that hitherto prevailing. This may be taken to mean that the proprietors of such enterprises as the one mentioned, the Chambly Electric Company, using the rapids of the Richelieu, and the Niagara concern, believe that they can furnish electric energy derived from moving water at a lower rate than those companies which adopt the more roundabout method of steam power. At any rate, the reduction of 33 1-3 per cent. in tolls for light, and 20 per cent. for power, is an invitation to trade which the average consumer will hardly neglect.

The question is asked with some eagerness : Will the steam power electric companies meet this cut in rates ? To this the only answer we have seen is the assurance of the president of the Royal Electric Company that they "would do the right thing by the citizens of Montreal." It is understood that the reduced rates offered by the Lachine Company for electric lighting are equivalent to one-half cent per hour for each sixteen candle-power lamp, and the company makes the claim that no city in the world of the size of Montreal has so low a rate. Of course, it is not every city in the world that has such a store of energy at its door as the foaming Lachine rapids. That confidence is not lacking in the paying character of the project is seen in the circumstance that the $500,000 of six per cent. debentures, redeemable in ten years, offered to the stockholders only, to the extent of 50 per cent. of each man's stock, were all taken up by the proprietors. It is estimated that these debentures may be redeemed in three years for an equal amount of stock at par. This debenture issue brings the total capital of the company up to $1,750,000.

PROGRESS IN THE BRITISH ISLES.

The remarkable progress made in the United Kingdom of Great Britain and Ireland within the Victorian era has been well emphasized in the celebrations that have recently taken place throughout the British Empire. Sir Michael Hicks-Beach, in his budget speech a couple of months ago, said : "Every comparison bears testimony to the wonderful improvement in the material well-being of the people of the United Kingdom, which has occurred since 1836. Our people, I think I may say, are better governed, are better protected, are better educated than they were. Wages have risen, houses are better and healthier, food and clothing are cheaper, and, perhaps as important as anything, crime has enormously diminished."

The statisticians agree with the conclusions of this statesman, and show by their tabulated figures a remarkable growth in prosperity since Victoria came to the throne. Taking conditions in the year 1837-40 as represented by 100, and calculating from this basis, Mr. Mulhall makes the following estimates for the United Kingdom :

	1837-40	1870.	1897.
Population.....	100	121	150
Commerce.....	100	480	623
Shipping..	100	322	957
Mining.....	100	310	602
Textile manufactures	100	252	360
Hardware manufactures.... ..	100	430	590
Instruction..	100	162	251
Agriculture...	100	120	105
Revenue....	100	140	195
Wealth	100	203	287

Notwithstanding the immense drain upon the country by emigration to different parts of the world and a modest increase in population of but 50 per cent., the gain made in commerce and national wealth is remarkable. While the shipping industry in most countries has made little headway, and in many has declined during this period, that of England has increased until it is now nine and a half times greater than in 1837. In mining, the manufacture of hardware, textiles, etc., great progress has been made. The competition of the colonies, the United States, Argentina and Russia has been so keen in agricultural products that agriculture has barely held its own in the British Islan

The wealth accumulated in Great Britain during this period has been well distributed. Workingmen have shared in the general advance made. Wages are, it is estimated, on an average 140 per cent. in excess of the remuneration paid labor at the commencement of this epoch. There has been not merely a nominal increase in wages, but a real increase in the purchasing power of the laborer. Wheat has declined in price. Improved methods of transportation and the exploitation of new countries have brought cheaper and better supplies of butter, cheese, eggs, bacon, sugar, tea and other commodities which are essential to life and comfort. The revenue of the country has not increased in proportion to the national wealth. More economical methods of taxation have contributed materially to the present prosperity of the inhabitants of the United Kingdom..

BUSINESS AND PLEASURE.

August is one of the months associated in the minds of many business men with the idea of holidays. The banker or the professor gets his "vacation"; the manufacturer takes his "seaside rest"; the country merchant is content with his short "trip"; the millionaire goes across the Atlantic or the Pacific—perhaps goes by rail from the one ocean to the other. Anyhow, the average slave of business in Canada tries to manage a change of some sort about this time of year, even if he only goes fishing or takes a sail on the lakes, great or small.

In a recent issue the London *Drapery World*, apparently in a Jubilee frame of mind, takes occasion in an article entitled "Business and Pleasure," to contrast the grimness, the dull assiduity of business as conducted in the United Kingdom fifty or sixty years ago with the gaiety of the home in these old days, and with the greater relaxation allowed the workers in trade today. In the old times, whether in the counting-house or behind the counter, respectful solemnity was the rule with the shopkeeper. Long hours and long faces went together.

> With the olden shopkeeper there was a time for everything except the enjoyment of the good things which nature provides to beautify life in this world—the fresh air, the green fields, the bright blue sea, the purple mountains, and the umbrageous valleys, which beckon one to snug repose and restful ease in so many parts of our beautiful land. None of these were for him, or his employees, or his children. The Sunday, even, was for them a day of lugubrious devotion rather than of healthy, buoyant praise, of grateful, reverent adoration.. As it was with the shopkeeper, so it was with every other class of the community, except that mixed lot reverenced by the shopkeeper as "the nobility and gentry." Work, work, work, was the one gospel of business. Holidays were regarded as an abomination. * * Naturally enough, those men prided themselves on the perfection of their own lives, their sobriety, unbroken industry, spotless integrity, and reverential honor of everything which they believed to be good. They knew no better. They were wrapped up in themselves. *They did not see the world;* they were out of touch with human nature, except that portion of it which was purely British. And they were unjustly critical of others. They enjoyed the good things which those others gave them. They quaffed their potions of rich, genial port, and denounced the wine-growers as idle, lazy vagabonds. They relished the fruits from the Italian valleys, and bemoaned the superstitious Italians who wasted days of each year in feasts and Lenten fasts; they tasted to the full of the vine juice of the French vineyards, and yet hated the French with patriotic fervor.

They did not see the world, these old-time shopkeepers; they only saw their shops and their homes. But things are changed in this respect to-day. British shopkeepers are no longer solemnly dull in their demeanor. They are politely suave and smiling to their customers, without being subservient, we are told. They smile and smile, and bargain while they smile, and some of them even grin at misfortunes. They love to brighten their surroundings, to make their stores attractive for customers and bright for themselves, and to enjoy life through the resulting profits. "If the shopkeeper can take his week-end holiday at the seaside, his assistant has his Thursday or his Saturday half-holiday to refresh both body and mind. His working days no longer in the summer time linger into the darkness of night or the glare of the gas light, and he is treated as a human being with human wants, social sympathies, and intellectual requirements." On this side the Atlantic there is improvement in this respect also; the outrageously long hours have been modified, and the hum-drum slavery of a clerk's life improved. People have learned that the average man or boy cannot stand "all work and no play" any more than the average beast can. The employer of labor has discovered that it pays to allow his men some recreation, and that it is money in his pocket to treat the human servant as if he were

A little dearer than his dog;
A little better than his horse.

HERE AND THERE IN BRITISH COLUMBIA.

The president of The Monetary Times Printing Company has been spending some weeks in British Columbia. He has visited the three large Western cities of Victoria, Vancouver, and New Westminster, and then made his way to Revelstoke, whence he made the trip to many of the active points in the Kootenays. Mr. Trout remarks, as our readers will see, upon the number of unemployed persons he found at Rossland; and he tells, besides, of the feverishness and unrest "that will not let a merchant read—hardly lets him sleep," such as he found general in the mining towns. His letter from Revelstoke is dated 29th July:

Nelson, unlike the other mining places I have found on this trip, appears content to take a comfortable snooze after daylight, and to close its shops before midnight. Its merchants can afford time, I think, to read a good trade paper. This place has the Big Hall Mines Company mines and smelter, and you see their export returns every week. Had I not taken this side trip I should have regretted it, and concluded that I had skipped a promising field that had not been worked. Although one's experiences are rather costly out here, still the trip has some compensating features. If I had time to loaf along the road and occasionally fish, I do not know of any trip that I should enjoy better than this Kootenay trip. I do not think the scenery can be excelled anywhere in the world, and at Kootenay Falls, above Nelson, abundance of trout can be caught. I could see them while waiting on the pier for the steamer, and would have been glad to have stayed there another day had time permitted.

There are some wonderful places in the Kootenay, and Sandon is one of them. Indeed, it is the last place one would think of selecting for a town site; but the deep gulch between two high mountains is the only place they could get room to stand it upon, and the houses of Sandon are sandwiched in like sardines in a box. On one side of the street the houses are built with their backs against solid rock, on the other side they are built partly over the creek which flows at the base of the mountain. Between the walls of the buildings on the street line there is only thirty or forty feet space in all for the roadway, and the sidewalks on either side. I have seen strange banking offices, but the temporary quarters of the Bank of British North America is the queerest of them all. It contains no "sweating box" except that may be called one where the manager and clerks sleep in their bunks at night, in the rear of the front office. The building stands against the rock, and I do not think it is over 15 or 20 feet long. While I saw blankets and other sleeping indications, I am not sure that the manager sleeps there. He did not tell me, but there seems to be a camping outfit for several persons in the place. I am told that the pay-rolls at Sandon are much larger than in any other camp in the Kootenay. There are no less than half a dozen good mines in active operation in that camp, and what I saw there in the short time I had at my disposal led me to believe it was true.

Another strange place is Rossland—truly a queer place. No doubt you have seen descriptions of it, and I shall not attempt one. But what particularly impressed me when I walked up the hill to the main street was the number of idle persons loitering around the street corners and saloons of the town. One would think, looking at the crowds, that he was in a city of forty or fifty thousand people. Upon enquiry as to the cause of this, I was told that in addition to the large number of loafers and hangers-on that are usually to be found about a mining camp, there were a good many people at Rossland who would be glad to work if they could get work to do. The trouble in many instances is that the shares sold in Toronto and elsewhere last winter at 10, 15, and 20 cents, did not net the promoters of some of the companies what they expected to enable them to work their claims. Consequently, the development work that had been going on in the spring had in many instances stopped or nearly stopped for want of funds. When properties are valuable or promise well they will no doubt pass into other hands in due course, and reorganization take place with additional capital. There are quite a number of paying and shipping mines in this camp, and there are also a number of good ones piling up their ore on the dump

It was late in the evening when I arrived at Kaslo, and having left it by the first train in the morning, I cannot say, of my own knowledge, much about it, although there are undoubtedly some good mines there also.

I have not caught the mining fever, and have no desire to be a big holder of mining shares. At the same time, I am sure that the possibilities of this part of Canada are great. There must still be hundreds of prospects that will prove to be great mines as soon as the necessary capital can be obtained to develop and work them. The banks are receiving daily considerable sums for investment, and much of this money is coming in from abroad.

It should be added that the Pacific Railway Company is giving the district a good steamboat and railway service. In order to reach Kootenay from this point one must take the C.P.R. train to Arrow Head, which is at the north end of Upper Arrow Lake; then one of the company's steamers down the Arrow Lakes, and the Columbia River, to Trail, thence over the narrow gauge railway, built by Mr. Heintze, which climbs something over 2,000 feet in twelve miles, and thus you reach Rossland, on the side of Red Mountain. Returning, you come down to Trail, which is not more than six miles distant, as the crow flies, and take the C.P.R. steamer up the Columbia River to Robson.

If one desires a change of route and scenery he can take the train by C.P.R. to Nelson, and from there go by either the International Navigation & Trading Co.'s boats, or a C.P.R. boat up the Kootenay Lake and River, past Pilot Bay, to Kaslo. From there he may continue his journey through the mountains over the Kaslo and Slocan Railway, to Sandon. From Sandon he must travel by the C.P.R. to Nakusp, on Upper Arrow Lake, where he again boards one of the company's steamers up Arrow Lake and Columbia River, and on by train back to the starting point, Revelstoke. The grade on some of theses narrow-gauge roads runs as high as 4½ feet to the hundred. After leaving Sandon one descends the mountains for four and a half miles on an average grade of 4.07 per cent., and I am told that the Trail road is still more steep. My recollections of the trip will be lasting; the scenery is so beautiful and there is so much that is interesting, and novel, too.

I learn that the Waverly Mining Company, whose mining lands are situated on the north fork of the Illecillewaet River, in British Columbia, have given McDermott & Ross a contract to build a wagon road into their property, a distance of twenty-five miles from the C.P.R. track.

At Revelstoke, the Kootenay Smelting and Trading Co., apparently for the purpose of securing a large amount of town porperty, built a smelting furnace, and after running through a few thousand tons of ore closed down the works and have never moved their machinery. This was a concern of an English proprietary.

The Smelting Company at Trail is supplied with all the ore that it can possibly handle, and might have ten times as much if the work could be done at a reasonable rate. What the mining companies badly need, especially about Rossland, is lower freight and smelting charges. These secured they will be able to use much of their low-grade ores, which are, under existing circumstances, useless piles of riches, and remain "on the dump" simply because, in the present state of things, it does not pay to handle them.

Revelstoke, B.C., July 29th, 1897. E. T.

A CONFERENCE ON THE WOOD PULP TRADE.

A gathering of Quebec and Ontario manufacturers was held in Montreal this week and a conference was arranged between them and several members of the Quebec Government. The deputation consisted of Mr. John Forman, president of the Pulp Manufacturers' Association; Mr. John McFarlane, of the Canada Paper Company; Mr. W. H. Rowley, of the E. B. Eddy Manufacturing Company; Mr. J. C. Smith, of the Toronto Paper Company; Mr. F. H. Clark, of the Sault Ste. Marie Paper Company; Mr. John R. Barber, of Georgetown, Ont., and Mr. A. Saucier, of the Maskinonge Paper Company. There were also represented by letter and personally the Laurentide Pulp Company, of Montreal; Mr. James Davy, of Merritton, Ont.; Mr. Florentin Savey, of Riviere du Loup, Que.; Messrs. Hamlin and Ayers, Lachute; the Thompson Paper Company, of Newburg, Ont.; the Acadia Paper Company, of Halifax, Nova Scotia.

The meeting considered the position of the Canadian pulp trade, in view of changed conditions brought about by the new American tariff, and by the enormously increased exportation of pulpwood in saw-logs and cordwood in different forms to the United States from Canada. The members of this and allied trades have had different interviews with the Federal Government during the last year, and asked for duties varying from $2 to $4 per cord, or its equivalent, and in view of the recent resolution by which the Federal Government was empowered to impose this export duty, it was thought best to await the return of Sir Wilfrid Laurier to ascertain definitely the intentions of the Government in regard to this matter. In the meantime the deputation asked the Provincial Government to lower the stumpage dues from 35 cents per cord of a hundred and twenty-eight cubic feet to 25 cents per cord. The Ministers promised to take the matter into their earnest consideration, but no definite answer could be given at the moment, because the proposition would affect the revenue from Crown lands.

"GIFT HORSES," AND SO FORTH.

A gift of twenty-four horses taken over by the men of our North-West Mounted Police at the time of the Jubilee Celebration has been offered by the Canadian Premier to the British Government, and has been accepted, "with thanks." This is generous and graceful of Sir W. Laurier and quite proper; we are glad of its acceptance. But in the announcement made in a Canadian paper of the proceeding, we find it stated that "the Government were informed that a large quantity of similar horses could be obtained [in Canada], if they are found to be suitable for war purposes. This, it is expected, will lead to a greater demand for horses of this character than there has before been." This smacks of business, not compliment. But it is only a year or two since English army officers came to Canada in search of cavalry and artillery horses, and all they could find in Ontario to suit them was some thirty; the remainder were not of the right shape—or something of the kind. Does our Premier expect to convince the War Office by a practical object lesson that our horses *are* the correct thing? We wish him luck. Still, it seems almost a pity to have a commercial aspect given to what looked, at first blush, like a gracious gift. There is danger that our horses may be looked in the mouth if either the Colonial Office or the War Office catches on to the notion that we are making merchandise of our compliments.

MASSACHUSETTS MUTUAL BENEFIT LIFE.

For the sake of the many in Canada who are interested and anxious to know what they have to expect as policy-holders of this company, we shall continue to give what information comes to us from time to time about it. On Saturday last Mr. Augustus F. Harvey, actuary of the Missouri State Insurance Department, and James D. Lewis, of the same, who have been investigating the affairs of the Massachusetts Benefit Life Association, made public their report in Boston. Besides showing the financial condition of the association, the report finds that all the policies issued from 1879, when the organization was incorporated, till the enactment of the statutes of 1885, relating to insurance upon the assessment plan, were illegal, and that the illegality of the business of the company prior to 1885 seems to have been condoned and legalized by the Legislature. This is truly a pleasant discovery for policy-holders. The report contains further severe criticism of the General Court for legislation in connection with the case. The following is the result of the examination of the account books of the association :

Mortuary and reserve......... ....$	909,609 15
Expense account.....	106,832 63
Non-invested assets	1,105,165 27
Contingent assets	795,351 20
Liabilities	911,389 90
Emergency fund	898,239 15

The number of policies in force was 38,111 at the close of June. If these were for $2,000 each it would require $76,000,000 to pay them in full.

AUSTRALASIAN DAIRY PRODUCTS IN THE BRITISH MARKET.

A very instructive chart, illustrative of the progress of Australasian dairy produce in British markets, has been compiled by W. Weddel & Co., 16 St. Helen's Place, London, E.C. It has one diagram illustrating the London wholesale weekly prices of French fresh butter, Danish salt butter, Australasian salt butter, and Canadian cheddar cheese, for the last four seaduction in the United Kingdom of butter and cheese during wholesale prices of Canadian cheese, f.o.b., Montreal.

The further colored diagrams in this chart indicate the production in the United Kingdom of butter and cheese during 1896, alongside of the quantities imported from the colonies and from foreign countries in that year. First, taking cheese: The 130,000 tons produced in the United Kingdom is followed by Canada with 61,785 tons ; then comes the United States, with 29,059 tons, Holland with 14,649 tons, the others being New Zealand, France and Belgium, with comparatively small quantities. The total of cheese for that year is 242,226 tons, or, reduced to pounds, say, 484 million pounds, a dozen pounds per head of population, so that John Bull is quite a cheese-eater.

Turning now to butter, almost as large a quantity of that was consumed last year in the United Kingdom, the figures given being 231,773 tons. Much more than half of this, viz., 136,460 tons, was foreign product ; 79,817 was home made, and only 15,426 tons was produced in the British colonies. Denmark, France and Sweden are the first three in the long list of suppliers of the United Kingdom, and Canada has as yet an inferior place in this list.

It is noticeable that while supplies of foreign cheese to the British Islands have declined since 1890, the supplies from Canada and Australasia have shown a steady increase for the last ten years. It is worth while to copy the figures which indicate the increase :

Year.	Canada. tons.	Australasia. tons.
1887........	31,644	516
1888....	33,417	1,350
1889.....	33,776	357
1890.........	41,894	1,450
1891.....	42,892	1,485
1892.....	51,930	1,279
1893.........	52,335	1,856
1894.....	57,105	2,719
1896.	61,785	2,758

Thus, the figures of Canada have just about doubled in ten years. The foreign cheese purchased by Great Britain and Ireland reached 63,809 tons in 1890, and declined to 49,682 tons in 1893, and 47,683 tons in the year 1896. The home product was over 140,000 tons in four years ended with 1891, but declined to 130,000 tons last year.

The circular of the firm named, descriptive of the dairy season of 1896-97, notes as a feature the absence of rapid changes in values. This is perhaps attributable to better man- the Danish Committee, took advantage of the Australian agement on the part of dealers. A year ago the Danes, or say drought and its effect in reducing Australian butter output, and rushed up prices a step, which had proved disastrous for some British buyers. This year the Danes tried to do the same thing, but the Britishers would not pay unduly high prices ; so that Danish butter was for a time a drug in the hands of its consignees.

Another feature of the past season has been the very narrow margin in values which has ruled between "choicest" and "best" factory Australasian butter. A distinct improvement is noted this year in quality of New South Wales and New Zealand butter. The colony of Victoria cannot claim much advance in this direction, as there has been a large proportion of the butter from this colony tainted with "fishiness," doubtless due to the high temperature and the severity of the drought which have prevailed there. It is interesting to learn that Mr. Robert Crowe, the Victorian assistant dairy expert, is enquiring into the cause of this flavor, and if his labors result in the discovery of the true source of "fishiness," and in its effectual prevention in future, he will have rendered a very valuable service to the Australasian dairy industry. "It is one of the most objectionable flavors found in butter, and the annual loss in money which arises from its presence in the shipments from Australia and New Zealand is very considerable."

The only Australasian colony that exported cheese to the United Kingdom in 1896-97 was New Zealand, which sent 2,100 tons, against 1,340 tons last season. The short make of European and English cheese in the summer of 1896 caused a considerable rise in values, and the London prices of Canadian choicest quality have, in the present season, averaged 9s. per cwt. more than they did in the one preceding. The chart shows that last season's prices are much higher than those of its two immediate predecessors, but not quite so high as those of the season of 1893-94 of cheddar cheese, which resulted from the short make of 1893, caused by the excessive drought which prevailed in England during that summer.

As to present appearances and future prospects Messrs. Weddel have the following to say : Up to the present moment everything is most promising for a big make of butter in Europe next winter. The hay crop, which is very large, has been secured, and the root crops give promise of being equally prolific. From the United States and Canada a large increase of butter is expected all through the autumn and far into the winter. Last year the import of United States and Canadian butter reached over 6,000 tons in excess of the previous year. In the West of England and in Wales, as well as in the Manchester District, considerable quantities of these butters were put into cold store, and these districts drew a large proportion of their supplies for the early winter months from this source instead of buying Australasian, as they had done previously. As the United States and Canada have largely increased their refrigerated transport, it is very probable that this summer's butter will arrive in better condition than last, and more of it be stored for winter use. It can be bought at present for about 85s. per cwt., c.i.f. to the principal British ports, and as the cost of storage, etc., will not exceed 5c. per cwt., it looks as if a supply of good butter will be available at about 90s.

ONTARIO CHEESE BOARDS.

We are advised that thirteen boards offered 26,427 boxes, which is a thousand boxes more than was offered by sixteen boards in the preceding week. By reason of better prices, the quantity sold was much greater, being 17,535 boxes and the ruling price 8⅛ cents, in some cases 8¼, and even a shade higher being reached. Shipments of cheese from Montreal are reported by Cunningham & Lemessurier at 114,896 boxes for the week ended with July, as compared with 61,311 in same week 1896. Shipments to date 832,422 boxes, as compared with 619,585 boxes to corresponding date last year.

FOR GROCERS AND PROVISION DEALERS.

The acreage planted in beans in Michigan and Canada has been much decreased. In Wisconsin farmers planted much less than usual, owing to the low prices last season.

A letter from Eastport, Me., dated July 31st, states that there are no sardine fish anywhere on the coast and no prospect of any for some time to come, the porgies having driven them off.

There are 150 salt-producing establishments in the United States, and during 1896 there were placed on the market in that country 15,671,015 barrels of salt, 280 pounds to the barrel.

The New Brunswick cherry crop is hardly going to be up to the average this year, according to St. John papers. At the present there are very few of the luscious fruit sufficiently ripe for picking. The Nova Scotia crop is also a failure.

Elsewhere we show that shipments of cheese keep up well, being much ahead of last year to date. The export of butter from Montreal has amounted to 44,619 packages since the opening of navigation this season. That of last year to corresponding date was 19,147 packages

On Monday last two large schooner cargoes of cod (schooners "Theresa" and "Victoria")—several thousand quintals in all - that were at Halifax Market wharf, were purchased, one each, by N. & M. Smith and R. I. Hart. Fish now oscillates in the neighborhood of $3 a quintal.

Messrs. McWilliam & Everist quote the prices of watermelons at Toronto 20 to 25 cents each. They announce Canadian peaches at 50 to 60 cents per basket, and Canadian cooking cherries at 60 to 75 cents per basket. California Crawford peaches, also pears, plums and grapes, are in the market.

In New York on the 4th inst., California dried prunes were firmer and there was a firmer feeling. More interest was being shown in California dried fruits by both home and export buyers. The inquiry was chiefly for forward shipment. Stocks of desirable quality on the spot are reported to be small.

The Glucose Sugar Refining Company, with an authorized capital stock of $40,000,000, has been incorporated in New Jersey. The company is empowered to make sugar from corn, and also to manufacture all the products and by-products of corn. Among the incorporators is F. O. Matthiessen, New York, the big sugar refiner.

The circular of Hills Brothers, dated July 31st, have the following regarding the currant situation : "Demand continues fair, but mostly for small lots, as dealers seem inclined to work from hand to mouth ; from present appearances there will be little, if anything, remaining here by the time the new crop arrives. Latest advices from Greece indicate a middling crop, and variously estimated from 140,000 to 150,000 pounds."

Rice was firm in New York on Wednesday, Japan quoting 4½c. and Java 4⅜c. The demand for domestic was quiet, as the orders received were exclusively of the hand-to-mouth character usual at the tail of a crop, jobbers generally holding off awaiting for free offerings of the new crop ; prices were quoted unchanged and steady, as dealers held only limited stocks and showed no disposition to hurry business.

New York has been distanced by Montreal as a cheese-shipping port. Last week's New York shipments of cheese were 21,899 boxes ; those of Montreal for the same period were 110,380 boxes. The last-mentioned quantity was despatched to London, Bristol, Liverpool, Leith and several other ports. Thus far this season Montreal has exported 215,000 boxes more than up to same date 1896.

The remarkable run of salmon on the Fraser River was still in progress on Tuesday last, and all the canneries had placed a limit on the number to be taken from each boat. The fishermen usually only make one drift, and catches of 200 and 300 fish are quite common, while 654 fish were caught in one drift on Monday night. Large quantities of salmon are being salted and as a result salt has jumped in price from $11 to $35 per ton.

Large quantities of fruit arrived by steamer "Olivette" last night from Boston, says the Halifax *Recorder* of 2nd August, California Bartletts selling at $3 a box ; Georgia Delaware grapes, $3 a crate ; water melons, 35c. each ; apples, $3.50 to $4 a barrel ; pineapples, good-sized, about 15c. ; cukes, 3½c. each : bananas, $1.75 to $2.25 ; oranges, Messinas, $4.50 a box, 160 count ; Valencias, $9 a case, 400 ; lemons, $6 to $7 a case. These prices are considered very fair.

A dodge which we do not remember to have heard referred to in the annals of Canadian smuggling is that of hollowing out logs of wood and filling the hollow with tobacco. The customs officials at Havana, Cuba, examined eight out of a consignment of 155 logs, which reached that port on the steamer "Seguranca," and were placed in the custody of the police at the Tallapiedra wharf. They were found to have been packed with fine Sumatra leaf tobacco If the remainder of the logs contain an amount of tobacco proportionate to that found in those already examined (over 9,000 lbs.), the total shipments of tobacco will probably reach 4,000 kilos. The logs, it is said, were shipped by a Maine lumber company.

Even in the halcyon regions of California such happy and philosophic persons as fruit-growers are speculators. The San Francisco *Country Merchant* pitches into them after this fashion : "Our raisin-growers have been busy making asses of themselves by holding organized meetings to protest against short sales of the coming crop by certain shippers at very low prices. An incurable ignorance of commercial principles appears to have got hold of our fruit producers. We found exactly the same disease amongst the orange-growers of the southern portion of the State. Afflicted with that species of rabies they are incapable of learning that while conventions and caucuses may be excellent in politics, applied to a commercial commodity they simply convince everybody that the market is rotten, and has no other foundation than bluff and intimidation. Regarded from a genuine commercial point of view (and no other will be found to work) shor sales at low prices are the very best thing on earth for a product abou to come on the market. Such low prices have the effect of warding off foreign competition and of stimulating investment."

ABOUT DRY GOODS.

On Saturday last there reached New York per West Shore road 370 bales of raw and manufactured silk from Japan, via Canadian Pacific Railway.

The Silk Association of America issues a monthly report of the imports of silk manufactures at the port of New York during the month of July in three years. In July, 1895, the value was $1,921,980 ; in July, 1896, it had fallen to $1,672,276 ; and last month (in which there were five weeks) it reached $2,419,550.

A cable of Monday last from Manchester, England, says of yarns that the home demand is very quiet, though prices are very firm. Cloth also is firm, but this is due to the fact that a large number of looms are idle and the output is restricted. Eastern staples are suffering from the fluctuating exchanges. The German market is very dull, and already begins to feel the effect of over-production.

The American print cloth market rules firm, and the feeling in cottons generally is cheerful. Sales of contracts of print cloths are reported by the New York *Journal of Commerce* as 84,000 pieces deliverable in August, 40,000 in September, 9,000, 4,000 and 2,000 in October, November and December respectively. The reported stocks for the week ended Saturday last were as under, compared with those for the corresponding week the previous two years :

	1895.	1896.	1897.
At Fall River, 64s.....	66,000	1,002,000	1,040,000
At Fall River, odds ..	108,000	663,000	
At Providence, 64s. ..	186,000	340,000	500,000
Total	360,000	2,005,000	1,540,000

Although Japanese cotton goods are generally inferior in quality to those made in Manchester, they are said to be largely superseding English goods in Corea. The British consul there states that the imports of these goods dropped from £495,968 in 1895 to £361,664 in the following year, a decrease which arose almost entirely from diminished British imports. The Japanese imports amounted to £126,000, where four years ago the imports from Japan were only £5,000 in value, and from this it is evident that Japanese goods have not only got a foothold in the country, but have come to stay, for the Japanese manufacturer has proved a successful imitator, and his goods commend themselves by their cheapness and the attention which has been paid to the requirements of the Corean market.

It is stated respecting the rhea fibre, that many experiments have been tried for the prize of 50,000 rupees (not far from $20,000) offered by the Indian Government for a process or machine which would, at reasonable cost, separate the delicate fibre of the rhea from the bark without injury. The Indian authorities now consider the problem solved by an English chemist, Gomess, who uses zincate of soda for the elimination of the resins, which is effected without injury to the delicate fibres. The ribbons or strips of bark, after being freed from dirt, are placed in a weak acid bath for a night, and are then passed through a mild bath of caustic soda to which zinc has been applied. The fibres are then washed and dried mechanically, and emerge as a long silky filasse, free from cuticle or gums, ready for the spinning comb. They take dyes beautifully, and are suitable for all kinds of fabrics, from cheap drills to gorgeous velvets or delicate laces, and peculiarly adapted for tents and sails, combining great strength with lightness and elasticity.

METALS AND HARDWARE.

The Buck Stove Works, at Brantford, which have been shut down since the death of Mr. Buck, started up last Monday with a force of 140 men.

Stocks of Lake Superior charcoal iron are getting up to a figure that can scarcely be considered an invitation to idle furnaces to get in blast. They were 125,000 tons at the end of June, as compared with 78,000 tons December 31st, 1896; 36,000 tons at the end of June last year, and 30,000 tons at the close of 1895.

The statistics just gathered by General Manager Swank, of the American Iron and Steel Association, show that the total production of pig iron in the United States in the first half of 1897 was 4,403,476 gross tons, against 5,976,236 tons in the first half of 1896 and 3,646,891 tons in the second half of 1896.

The *Iron Trade Review* says: "There is some work on hand now at most of the large lake shipyards The Globe Iron Works, Cleveland, has two revenue cutters. the Union Dry Docks Company, Detroit, has a large vessel, and F. W. Wheeler & Co., Bay City, have two large tugs. There is promise of some large work late in the year."

A contract has just been given by Chicago and Cleveland interests to a Chicago yard to build a steel tow barge of 376 feet keel, 48 feet beam, and 26 feet depth, to be a duplicate of the steel schooners "Amazon" and "Polynesia." The "Amazon" has established a 6,000-ton (net) cargo record from Lake Superior, and the "Polynesia" has just taken down 6,134 net tons of ore.

A Halifax despatch of Tuesday last states that a mine or well of quicksilver has been found just outside of Dartmouth, on the other side of Halifax harbor, by a young lady of that city, Miss Jessie Mitchell. A quantity of the mercury was submitted to Prof. Dawson of Ottawa, who pronounced upon it favorably, and an English expert has also declared that the mineral is valuable. Miss Mitchell secured the property on which her discovery was made, and a company will be organized to develop the deposits. It is unusual to find this metal in such a pure state as it is said to be here found. It is mostly obtained by reduction from cinnabar, one of its ores.

LIFE ASSURANCE MATTERS.

It is stated that the well-known Travelers Insurance Company, of Hartford, has paid since its organization, thirty-three years ago, 300,000 claims, representing total payments aggregating nearly thirty millions of dollars, a remarkable record.

"I couldn't get a policy from that insurance company," said a fellow to the kerbstone observer of the Detroit *Free Press*. "What," asked that philosopher, "were you rejected?" And the other replied, "Yes, I was. I don't ride a wheel, and all pedestrians are now considered extra hazardous risks. As I'm near-sighted in one eye, they wouldn't take me at all."

The architect of the Sun Life Assurance Company's building in Ottawa writes referring to our statement that the iron work for that building was being prepared in Carnegie Works, Pittsburg. He says this statement is rather misleading. The work was awarded to the Dominion Bridge Co., and all shop work will be done at their works at Lachine, Que. Mr. Horwod adds: "My instructions from the Sun Life Assurance Co. are to award, as far as possible, all contracts for this building in Canada."

"Addition, division and silence," used to be familiar words in certain offices long ago. As one of a new set of rules for the regulation of its clerks, the Hartford Life Insurance Company is insisting upon "silence." The rule prohibits all conversation between the clerks during office hours, except on matters connected entirely with business. The office hours are fixed at from 8.30 to 12, and from 1 to 5. As most insurance offices in Hartford close at 4 p.m., the clerks of the Hartford Life think this is rather hard, but it is the restriction on conversation that hurts the most.

Although the Germania Life Company has ceased to do business in Canada, there are policy-holders in the Dominion who will be interested to hear that Mr. Hugo Wesendonck, the veteran president of that company, has decided to retire from the active management of it. Mr. Wesendonck has been connected with the Germania since, mainly through his efforts, it was organized in 1860. Since that time he has been at its head, and the company has prospered, having accumulated total assets of $22,362,442. The principal reason Mr. Wesendonck has assigned for his retirement is old age, being now in his eighty-first year.

—Mr. Duncan Cameron, who has been agent of the Merchants' Bank of Halifax at Maitland for the past four and a half years, has been transferred to the management at Shubenacadie, a prosperous little town on the Intercolonial Railway.

FIRE INSURANCE ITEMS.

The action of the Louisville board in ordering a flat reduction of 25 per cent. in rates on brick distilleries and 35 per cent. on iron-clad and frames, has caused great dissatisfaction among the members of the Kentucky and Tennessee board, and it is highly improbable that there will be any reduction made in rates for the State at large.

Montreal fire losses for July were unusually light. The only serious fire in that city was the one at the eastern abattoir, which entailed a loss of $100,000. According to the books of the Montreal Fire Commissioners, 35 fires in all were investigated, involving a total loss of $108,000. The loss in July, 1896, was much larger.

A salvage case which involves large sums has just been decided in the United States courts. The Merritt Wrecking Company, the Chapman Derrick Company, and the North American Insurance Company have been awarded $160,000 as salvage for hauling off the steamer "St. Paul" when she was ashore off Long Branch last year. The "St. Paul" cost $2,650,000, and the cargo was valued at $1,980,989, of which more than one-half was gold coin and bars. Without the aid of the libellants Judge Brown held that the vessel would never have got off. "No previous salvage task has ever equalled this, and considering the high merit of the aid rendered, I regard $160,000 as the proper service. Of this amount $28,724 is to be charged to cargo, the remainder, $131,375, with costs, against the 'St. Paul' and her owners."

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, August 5th, 1897, compared with those of the previous week:

CLEARINGS.	Aug. 5.	July 29.
Montreal	$11,655,666	$11,857,044
Toronto	6,546,896	6,686,952
Halifax	1,334,030	1,082,917
Winnipeg	1,552,354	1,291,626
Hamilton	612,674	481,234
St. John	696,401	764,046
	$22,398,021	$22,163,819

Aggregate balances this week, $2,919,838; last week, $3,488,198.

—A suggestion that has within it possibilities of future trade has been made by the firm of Richard Brown & Co., of Alexandria, Egypt, to the secretary of the Toronto Board of Trade. The letter received by Mr. Wills calls attention to the opportunities for Canada in respect of trade with Egypt. It is stated that the import trade of Egypt is increasing rapidly, and will continue to do so when the Dongola and Soudan are opened up. The competition between Continental countries is keen, but there is an opportunity to introduce Canadian goods. Among the goods which would find a ready market, according to this letter, are iron bars, plates, sheets, pipes, general ironware, woolen goods, drugs, chemicals, leather goods, belting, oils, grease, electrical instruments, zinc sheets, cutlery, iron bedsteads, carpets, boots and shoes, turpentine, paints, colors, varnishes, paper and paper goods, lamps, and soap.

—The Board of Trade of Woodstock, New Brunswick, held a meeting last week and discussed among other things passenger rates between that place and Montreal. Woodstock merchants say that the bulk of their business is with Montreal, and that it would be a convenience to them if the C.P.R. would issue cheaper tickets. The passenger rate to Boston and return is $18, as compared with $26 to Montreal and return, and Boston is only thirty miles nearer than Montreal. The secretary of the board was instructed to write to the C.P.R. head office at Montreal setting forth the opinion of the Woodstock Board, and also to write to the Montreal and Toronto boards of trade asking their co-operation in securing lower passenger rates.

—There is ground for hope that the heavy rains at the end of July have not damaged the crops in Ontario to the extent that was feared. One gentleman from Haldimand County tells us that although appearances at first justified grave fears, investigation this week shows that but little damage was done. Another, from Walkerton, says that on Sunday last he visited fields of grain in different townships of Bruce County, and was most agreeably surprised to find the wheat berry plump and the general condition much better than had been apprehended. Up north, that is for fifty miles along the Northern, and northwestward on the C.P.R., there is much discoloration of grain.

WHEAT AND FLOUR PROSPECTS IN THE UNITED STATES.

European millers seem to have in prospect a decidedly short and decidedly inferior crop of wheat. Even in Hungary the new wheat is said to show up bad, while in Russia, according to all reports up to date, the crop is a calamity crop in both quantity and quality.

The latest wheat crop reports indicate a situation that ought to cheer the millers in the United States. Europe is short on wheat, and our crop promises to be very large, as well as very fine. Europe will need probably all the wheat the United States can spare, and along with the grain there should go a good deal of flour. The outlook in all the wheat lands of the southern hemisphere is bad for the crop that is due next December and January. The situation is bullish whatever may or may not be done with prices. The European importers seem to have no fear that supplies will be short so long as the United States remains in the wheat-growing business. They have faith in Uncle Sam.

If the present indications in Europe are realized in the wheat crop of that continent, there will be a call for something like 250,000,000 bushels of United States wheat in Europe during the coming twelve months. If the present indications in the United States materialize, we shall not be able to spare so large an amount of wheat during the coming year. Our wheat crop is estimated all the way from 460,000,000 up to 560,000,000 bushels. At the lower figure we should be able to export less than 100,000,000 bushels, unless the reserves from 1896 are much larger than they seem to be. At the higher figure we should be able to export about 200,000,000 bushels. There ought to be an advance in wheat prices between the harvest of 1897 and that of 1898 in the northern hemisphere. —*Buffalo Milling World.*

A NO-LICENSE CITY.

The secretary of the Dominion Alliance, Mr. F. S. Spence, of Toronto, has returned from Charlottetown, where he went to take part in the contest which resulted in the repeal of the Scott Act in that city. He says the repeal will leave the city in the peculiar position of having practically unrestrained traffic in intoxicating liquor. The sentiment of the province is so strongly opposed to a system of licensing that the Legislature will not do anything in the way of authorizing particular persons to sell liquor or derive any revenue from the traffic. There is on the Statute Book a Police Regulation Act, which provides that in places in which liquors are sold certain conditions must be observed. There must be no seats; places must be open to the street, with no blinds or screens; nothing but liquors and oysters are to be sold on the premises. There must be no back door or any communication with any other part of the building. Bars must be closed within certain hours, etc. Every person who complies with these conditions may go into the liquor business.

IRA CORNWALL'S FUNERAL.

We take the following account of Mr. Cornwall's funeral from the St. John *Telegraph* of Wednesday, 28th July: A great number of citizens, as a token of the esteem in which they held Mr. Ira Cornwall while in life, followed his remains to their last resting place yesterday afternoon. From the residence on Orange street, the remains were taken to Trinity church, where services were conducted by Archdeacon Brigstocke. The interment was in Rural cemetery. Many persons with floral tributes indicated their regard for the deceased gentleman, and among those from societies was a large wreath of pink and white carnations and ligonias from the Board of Trade. The pall-bearers were George Robertson, T. Barclay Robinson, James H. McAvity, F. S. Sharpe, D. J. McLaughlin and A. Wellesley Peters. Members of the Board of Trade and of the Y.M.A. of Trinity church, attended the funeral in a body. At a special meeting of the Board of Trade yesterday afternoon the following was adopted:

Resolved, That the members of the St. John Board of Trade have heard with deep regret of the death of their late secretary, Mr. Ira Cornwall, and desire to place on record their sense of the faithful and conscientious manner in which the duties of his office have been performed by Mr. Cornwall, and their appreciation of his warm and patriotic interest in every measure tending to promote the interests of St. John; further

Resolved, That as a mark of their regard, the members of the board attend in a body the funeral of the deceased; and that a copy of these resolutions be sent to Mrs. Cornwall by the vice-president, with the expression of the deep sympathy felt for her in her bereavement.

COLLECTING DEBTS.

A spunky grocer in Atlanta recently undertook a brand new way to collect an old debt which attracted the attention of the whole city. The grocer's name is Broyles, and the man who owed him was a Dr. Ebbert. The doctor did not deny the debt, but said that he was unable to pay, although it was a matter of only $4, and the doctor had money for the luxuries of life, such as theatre tickets and the like. After trying all of the usual methods of making collection, without any success whatever, Grocer Broyles pressed into service every negro whom he could find, sending the darkies around to dun the doctor. This was bad for the darkies, as several of them were badly used up in being ejected from the doctor's premises, while others who successfully resisted were arrested for disorderly conduct. The grocer stood by them, though, and paid all the expenses. Next he hired all of the colored washerwomen in the city and sent them after the doctor with dunning notes, when a friend of the doctor interfered and paid the bill. But this did not stop the war, for the doctor was so mad when he heard that the bill was paid that he brought suit against the grocer for malicious persecution, and hundreds turned out to the trial. It turned out in a victory for Broyles, however, and a new method of collection is apparently thus established in Atlanta.—*N. E. Grocer.*

NICKNAMES OF RAILWAYS.

The universal shortening of the nine syllables of the name of our longest Canadian railway into the short and handy "C.P.R.," afforded Sara Jeannette Duncan scope, in her first book about a trip to Japan from Montreal, "A Social Departure," for a humorous reference to the bigness and the ubiquity (in Canada) of that well-known road. She called it the "Seepiar," and her real or imaginary chum on the journey was rather more mystified by the title, before she knew the reality, than Miss Duncan herself. It is a handy title in general use here, like that of the "Erie" or the "B. & O.," of the "Big Four," in the United States. Indeed, there are many people who would be puzzled to give the titles in full of the American roads indicated, so used have they become to their nicknames or abbreviations.

In a country so vast as the United States, and with so many tens of thousands of miles of railway yearly being added to, foolishly or wisely, there is much room for shortening the names of railways, especially of consolidated lines. And the St. Louis *Globe-Democrat* tells in a late issue how some of the prominent roads obtained their popular titles.

A St. Louis railway man told the reporter that the Chicago, St. Paul & Kansas City road is called the "Maple Leaf." By drawing a line around the cities after which this road is named on a map it will be found to form a perfect leaf of the maple tree. The Pittsburg, Cincinnati & St. Louis road is called the "Panhandle," for the same reason—a line drawn through these cities making a good counterfeit of a panhandle.

The "Clover Leaf" is given to the Toledo, St. Louis & Kansas City road for the same cause, inasmuch as it doesn't come near resembling a clover leaf under the same circumstances. Possibly the road gets its *nom de plume* on account of the exceedingly fine grass lands through which it passes.

The same man says that the Minneapolis, St. Paul and Sault Ste. Marie is called the "Soo," and is an abbreviation of the pronunciation of the latter name. The "Big Four" is taken from the consolidation of four big roads, the Cincinnati, Indinapolis, St. Louis and Chicago, the Cleveland, Columbus, Cincinnati and Indianapolis, the Indianapolis and St. Louis, and the Cairo, Vincennes and Chicago. This consolidation took place many years ago, the nickname given, and it has stuck to it ever since. Many railroaders claim that the words "Big Four" are taken from the four big cities touched by the road, namely, Cincinnati, Chicago, St. Louis, and Indianapolis, but I think the correct origin is the one I have given.

Press dispatches frequently come from the West telling of railroad accidents on the "Soo" or "Big Four" roads, and the eastern readers that are not well posted on railroad nomenclature are at a loss to locate the scene of the catastrophe. Recently an order has been issued by the Associated Press to the effect that unless an accident has occurred in the neighborhood of a large city, the road upon which the wreck has happened must be given in full in the despatches. This order is a good one, because there are as many nicknames to railroads as there are roads, and in many cases the nickname does not indicate whether it is the west, south, east or north.

Newspaper readers will recall the great railroad coup, in which ex-Senator Brice was interested some 15 years back, by which the New York, Chicago and St. Louis road was built and the New York Central paralleled from New York city to Buffalo. The road was built in a day, comparatively speaking, and the buying of it by William H. Vanderbilt resulted in a great profit for the selling syndicate and the christening of the road, the name of which has stuck to it to this day.

Vanderbilt was grumbling at the price he had to pay, and remarked:

"Why, if the infernal road was nickel-plated it couldn't have cost more."

And the road has been known all over America by the name of "Nickel Plate" ever since.

The euphonious name of "Queen and Crescent" is given to the Cincinnati, New Orleans & Texas Pacific road. This nickname comes from New Orleans, the Crescent City, and Cincinnati, the Queen City.

The Louisville, New Albany & Chicago road is called the "Monon," from the fact that the main junction on the road is so called. The unique name, "Nypano," is given to the New York, Pennsylvania & Ohio road, and is simply an abbreviation and consolidation of the first letters of each State. This is the road, I think, that the late Mr. Vanderbilt threatened to use as a club against the Pennsylvania road on account of a belief that the latter road was intruding in his territory. A compromise was effected between the two great railway magnates, Roberts and Vanderbilt, and the resources of this road were never properly developed. The St. Louis, Arkansas & Texas road is called the "Cotton Belt," and, of course, derives its name from the great product of that region.

"Blue Grass," a pretty name for a railroad, is given to the Kentucky Central on account of the exceptionally rich grass country through which it passes. Tom Scott's great road, the Southern Pacific, is called the "Sunset." I have never learned the origin of this name, but, perhaps, its connection with the Pacific, the home of the setting sun, brought about the christening. The New York, New Haven & Hartford is nicknamed the "Consolidated." The Missouri, Kansas & Texas line sails under the pretty sobriquet of "Katie," taken from the initials of Kansas and Texas. For short the New York & Hudson River road is called "Central." The New York, Lake Erie & Western, the "Erie." The Delaware, Lackawanna & Western, the "Lackawanna;" the Atchison, Topeka & Santa Fe, the "Santa Fe," and the St. Louis & San Francisco the "Frisco."

Two humorous nicknames are the ones given to the Buffalo and Southwestern and Buffalo and Jamestown railroads. The former was first called the "B. & S. W.," but of late goes under the name of "Brandy and Soda." The latter road, on account of its connection with Jamestown, is known all through the railroad world as the "Jimtown road." To come closer home, the Chesapeake & Ohio is called the "F.F.V.," taken no doubt from the name given its fastest train. The Baltimore & Potomac, the "B. & P.," the Baltimore & Ohio the "B. & O.," and the Richmond Terminal the "R. T." These are abbreviations, but what the trainmen know these roads by would not look very well in print, and if made public might perhaps ruffle the courteous demeanor of the managers of these roads, who are certainly the princes of good fellows.

UNITED STATES PROSPECTS.

Henry Clewes still strives, very hopefully, to find ground for the recovery of activity in business, which he insists is "coming." Here is what he says in his New York circular of Saturday last: * * "The effect of the adverse turn in the weather upon harvest prospects and on the corn and cotton crops naturally produces some hesitation, the more so because the outs find it to their interest to exaggerate the importance of those adverse conditions. Under all the circumstances, therefore, the influences of the moment seem to incline towards a temporary halt in the upward movement of prices.

"This, however, is to be regarded as only a passing cloud. All the conditions that have been for several weeks contributing towards a permanent rise in prices are still in full force, and must inevitably reassert themselves after this brief halt. As to crop prospects, two things become more certain as the season develops; first, that our wheat crop is likely to prove one of the largest ever raised; and next, that the foreign deficiencies of wheat supply are extraordinarily important. These factors now seem to be established beyond any possibility of change by later reports. The prospects as to corn are less developed than those relating to wheat. At the moment, either a large crop or a deficient one may be considered possible; but there is a hopeful probability that the present disturbed atmospheric conditions may be followed by a run of weather favorable to the maturing of the crop.

"These agricultural conditions mean, in the first place, a large increase in the earnings of the railroads, which may be expected to appear from this time forward. In the next place, we may reasonably expect an unprecedented export of agricultural products, the increase applying to values as well as to quantity. The relatively high price of wheat together with the extraordinary volume of surplus home supply, will have a very important bearing upon the current of our foreign trade. To this must also be added the export of an immense cotton crop. The outward movement in these two great staples gives a certainty of a year of extraordinary exports. On the other hand, it is to be taken into account that the imports promise to be relatively light. How far the advance in duties, under the new tariff, will exclude foreign goods, remain to be proved; it cannot fail to have some appreciable influence in that direction.

"But it is already an accomplished fact that fully $100,000,000 worth of merchandise has been imported in advance of the wants of the next twelve months; and what is of special importance in this connection is the fact that a large portion of those imports have been already paid for, so that their effect upon the foreign exchanges is a thing of the past. It is plain that these conditions lay the basis for an extraordinary foreign trade balance in our favor during the crop year upon which we have entered. The probabilities thus point to an unusually important import of gold * * *."

THE ENGLEDUE "DEAL."

The Ontario Government Gold Concessions Company, limited, is the title of the company formed on the arrangement made with the Government of Ontario, known as the Engledue deal. As a result of the visit of Messrs. Mason and Reed (J. Peake Mason, of London, Eng., and James Reed, formerly of Brantford, now of London, Eng.), two parties have been sent out prospecting. Yesterday Mr. T. R. Deacon left by the steamer "Catharine S." with supplies and sixteen men, who go to thoroughly prospect Block B, which lies southwest of Deadman's portage, says the Rat Portage *Miner* of 31st July.

Mr. Alan Sullivan left on Monday night by the steamer "Shamrock," taking with him fifteen men, their destination being Block A, north of the Seine River gold mines. He intends making Fort Frances his headquarters in directing operations on that block. His men are divided into parties of three each, and when he has fully laid out the work he will put on ten more parties, making in all 45 men.

The instructions to both Messrs. Deacon and Sullivan are to carry on the prospecting work to such an extent that a large portion of both blocks will be thoroughly explored before the snow flies. The intention is to find something which will justify development work during the coming winter. The first move made by the Ontario Government Gold Concessions Company in their actual operations is a good one in the opinion of the *Miner*. "The appointment of local men as managers to superintend their work, is commendable. Both Messrs. Deacon and Sullivan are well qualified for the positions to which they have been appointed. They have full authority to carry on the work, being salaried to devote their whole time to it."

EDMONTON FUR SALES.

The fur sales since last issue are the largest on record, says the Edmonton *Bulletin* of last week. The following is a complete list: D. Cadzow sold to J. S. Segers, $401.10; A. Green sold to J. S. Segers, $64.50; Robt. Logan to A. N. Rose, for Ullman & Co., $80; Brick Bros. to R. Secord, $10,888.88; Colin Fraser to R. Secord, $13,777. Total sales for the three days since last issue, $25,211.48. Total sales for the last ten days, $34,028. The different bids on Colin Fraser's lot were as follows: $13,777, $13,567.75, $12,698.28, $12,563.63, $12,300.05. This practically winds up the fur business for this season, as all of the large lots are in and the traders are returning with their goods and preparing for another winter's trade.

A HUGE PINE LOG.

Evidently there are big pines on the Ottawa and Parry Sound Railway. A photograph of a log sawed from one was taken by the St. Anthony Lumber Company, of Whitney, Ont. It represents a giant of the forest. The pine log in question, and which was recently cut by the St. Anthony Company, measured 72 in., or 6 ft. across the butt, and 66 in. at the smallest diameter of the top end. It would make if sawn into boards four thousand and sixty feet of lumber. It was cut on the limits at the foot of Long Lake, about one hundred and forty-four miles west of the city of Ottawa. A picture of the big log is to be kept as one of the records of the company. The St. Anthony Lumber Company, of which the principals are Chicago, Saginaw and Minneapolis men, has a limit on the new Ottawa to Parry Sound Railway, which comprises 370 square miles. It employs 380 hands in the mill, and 650 in the woods. Power is furnished by an engine of 800 h.p. Logs to the number of 287,000 were cut in the woods, to be sawn this winter.

ADVICE TO WRITERS.

If you've got a thought that's happy,
Boil it down;
Make it short and crisp and snappy,
Boil it down;
When your brain its coin has minted,
Down the page your pen has sprinted,
If you want your effort printed,
Boil it down;
Take out every surplus letter,
Boil it down;
Fewer syllables the better;
Boil it down;
Make your meaning plain—express it
So we'll know, not merely guess it;
Then, my friend, ere you address it,
Boil it down.

—*Chicago Despatch.*

—In view of the loud protests made all over the South against the employment of negro labor in cotton mills, the Messrs. Monteith, of Columbia, S.C., who propose to start a mill to be operated exclusively by negro labor, are making a very risky experiment, and one which we do not believe will meet with the approval of citizens generally, says the Columbia *Register*. Of course these gentlemen have a perfect right to build a mill and run it with any sort of labor they can get—whether it be white, black, red or yellow—for any wages, but we do not see any economical or social good to come of it to the State. However, if the colored people wish to subscribe to the capital stock of the mill and build it themselves, they would have a perfect right to say that only colored labor should be employed.

—The Queen's Jubilee is said to have helped the telegraph companies of the Old Country immensely. Of ordinary messages alone the number on the 21st was 195,411, and of these 120,140 required double transmission. On Jubilee day—a holiday—there were 62,294 messages. On the 21st, between 8 p.m. and 8 a.m., there were 467,200 words of press telegrams, and on the 22nd (Jubilee day) 434,100 words.

—"My mither sent me to see if you wad gie her a calendar like the one you gied to Mrs. Mackay," said a boy to a grocer in the village. "But, my little boy," replied the grocer, "your mother does not get her groceries here." "No," replied the boy, "but she borrows them from Mrs. Mackay, and Mrs. Mackay gets them frae you" —*Household Words.*

Commercial.

TORONTO MARKETS.

Toronto, 5th Aug , 1897.

Breadstuffs.—The market is fairly active in this line, the demand being better than it has been. There is a very good export trade, but prices are lower. Manitoba flour holds its value, while Manitoba wheat is higher.

Dairy Produce.—There appears to be but a small quantity of butter moving for the season; buyers are not inclined to pay what the country merchants ask. The difficulty seems to be in the matter of selections. Sellers are holding out for former prices on run lots. The buyers offer to pay old prices for selections, but claim that there is too much poor and inferior butter about to buy in straight lots, and they can hardly be blamed. All this means that a considerable quantity of butter will be accumulating at outside points, and it can be readily seen that the quality will not be improving. Creamery butter, as usual, is in very fair demand, and is being bought up readily at outside prices. It is said on the street that all the surplus stock of creamery butter has been exported to the British markets, where it meets with a ready sale. On the other hand, ordinary dairy butter is not wanted for export. Following are a few quotations: Number 1 dairy in tubs, 11½ to 12½c.; number 2 dairy, 8 to 9c.; creamery butter in tubs, 17 to 17½c.; pound prints, 18 to 18½c. Egg dealers report some improvement in the quality of the stock, and as a consequence they are buying somewhat more freely. The quantity of eggs coming forward is said to be more than is required for local consumption, and the surplus stock is being shipped away to foreign markets in cold storage. The best stock prices are firm at 10 to 10½c., and number 2 stock brings ftom 7 to 9c. per doz. The cheese market is unchanged, and there is nothing new to report as regards prices. The recent rainy spell has caused good pastures, and naturally this circumstance has helped to keep up the production of both cheese and butter.

Drugs.—The condition of affairs in drug and chemical circles is reported as continuing satisfactory. Castor oil has stiffened materially in price, and is now quoted at from 12 to 14 cents, instead of from 9 to 12 cents, as quoted a week ago. Quinine is in an unsettled state, and the feeling seems to be that an advance in price may be expected. Insect powders are in demand, with the supply limited. Prices have advanced from 35 and 38c. last week to 38 and 45c. now.

Dry Goods.—It is a very great pleasure for us to repeat the statement heard in various warehouses, that in the dry goods trade in Toronto business has not been as satisfactory for years as now. True, this is not the sorting season, but travellers are on the road, and find that those merchants who have capital and have bought sparingly of late years are gaining confidence, and placing good orders. Some of the retailers, whose credits have been limited, are getting into better positions, and are buying more readily. We are told of one house in the city that is doing a larger turnover by some thousands of dollars each week than it has done for five years gone by, and in spite of the fact that all hands working till 9 or 10 o'clock every night, the shipping room is completely filled on the following morning with goods that ordinarily should have been sent out the night before. All this goes to show that trade in this line has taken a sudden impulse for the better, and it is to be hoped such a condition of affairs may continue. Carpets, prints, dress goods, linens, underwear, etc., are all in good demand.

Fresh Fish.—The quantity arriving is not large and as the demand is ever plentiful there is somewhat of a scarcity. Trout and whitefish are quoted at 7 cents per pound; sea salmon, 17 to 20 cents; halibut, 15 cents; haddock and cod are worth 8 cents.

Fresh Fruits.—The trade in this line continues satisfactory. Watermelons are quoted at from 20 to 25c. New lemons from $5 to 5.25; November cut are lower at $4 to 4.50. Bananas sell at $1.75 per bunch. Egyptian onions are steady, at 3c per lb. Red raspberries bring about 4 cents; Lawton berries, 4 to 5 cents; red currants in 12-quart baskets, 25 to 35 cents; black currants, 45 to 60c.; peaches, 40 to 75c.; plums, $1 to $1.25; apples, 20 to 35c. per basket. Canadian pears, which are now coming into the market, are worth all the way from 25c. to 50c. per basket Reports from the fruit sections say that the crop will be excellent. Apples will not be so plentiful as they were last year, but the quality is likely to be finer.

Grain.—Wheat has advanced in price during the week from 2 to 3 cents all around. The market is strong at the new prices for both milling and export. Oats are steady and unchanged. Peas are said to be scarce and wanted at old prices, but not many are being offered Reports from the country are contradictory as to the damage done by the recent rains. Some say that very severe injury has been occasioned, and others say that things are not so bad as they seem. We have personally met some farmers who thought that while it was raining their crops were doomed to destruction, but who, upon going into the fields in the sunshine, came to the conclusion that the damage could have been much worse. Be that as it may, the fact remains that until the rains came prospects were splendid, but now we shall have to take the good with the bad

The stocks in store at Port Arthur on July 24th were 1,052,113 bushels, and there were received 194,456 bushels, and shipped 371,505 bushels, leaving in store on July 31st, 875,064 bushels.

Groceries.—Sugars are quiet but firm. Starch quotations are changed and for the time being will sell as follows: No. 1 white, 5c. instead of 5¼c.; Canadian Laundry, 4c. instead of 4½c.; Silver Gloss and Lily White are changed from 6½ to 6c. in keg lots. Barrels and kegs of No. 1 white are changed from 4½ to 4c., and Benson's prepared corn starch, St. Lawrence prepared corn starch and Brantford No. 1 prepared corn starch are changed to 6c. from 6½c. Canada pure corn, Durham and Challenge brands are reduced from 5½ to 5c. Currants are rather out of the market at present, but new shipments will begin to arrive in about another month. A fair demand exists for raisins. Valencias, large, are selling at from 4½ to 6½c. for 1896 fruit, and the new fruit will come in with currants. Twenty-lb. caddies of tobacco are now on the market as well as the old size of 40 lbs. There was a general complaint made on the part of smaller dealers that the larger size packages were unsuitable to this weather.

Hides and Skins.—Receipts of hides are small. The demand is adequate and prices are unchanged. Lambskin offerings are only fair and the market is 5 cents higher than it was a week ago.

Hardware and Metals.—Trade during the week has not been so brisk as during the three or four weeks previous. The falling off in the demand for harvest tools will account for this, and it will be remembered that the demand this year was away ahead of what was expected. Trade in tinware is also somewhat slower, but yet there is a fair quantity moving. Granite ware is active in some lines, which can be accounted for by the advent of the fruit-preserving season. In metals business remains steady, galvanized iron moving quite freely. Tin plate has likewise been selling well, prices in general remaining firm. Canada plate shipments from stock are exceedingly light, but import orders are being booked. The demand for plumbers' supplies has improved, and manufacturers in this line are kept busy. Few changes of importance have been made in the Prices Current list.

Provisions.—The demand still continues good, with prices generally strong. Stocks are light and new supplies are not coming in too freely. The export trade in hogs consumes the most of what comes into this market. Lard is plentiful, but prices are low.

MONTREAL MARKETS.

Montreal, 4th Aug., 1897.

Ashes.—The depressed values are apparently affecting receipts, which have been extremely light of late, but prices show no signs of recovery. There is no business of any consequence passing. Quotations are continued at $3 to 3.05 for first quality pots; $2.80 for seconds; pearls, $4.30 per cental.

Cements and Firebricks.—Receipts for the week ending to-day are practically *nil*, and business has assumed a much quieter phase, no transactions of any size being reported. Quotations remain without variation at $2 to 2.10 for English, and $1.90 to 1.95 for Belgian Firebricks, $15 to 21.00 per thousand.

Dairy Products.—The cheese shipments of last week to Europe more than recovered the falling off of previous week, and again exceed the 100,000 figure by 10,380 boxes. London headed the list by just about 40,000 boxes, followed by Bristol with 32,780 boxes. Liverpool took 17,900 boxes, and Leith showed up well for a not often heard of customer, with 12,695 boxes. The figures for the corresponding week of 1896 were 59,992 boxes, and the gain for the season so far is 215,000 boxes. As showing how Montreal has grown as a cheese shipping port at the expense of New York, it is interesting to note that the exports from the latter city last week were only 21,899 boxes. The local market is about steady at 8 to 8¼c. per lb. for Ontario; Townships, 7¾ to 8c.; Quebec, 7⅝ to 8⅜c. Butter is a shade easier at 17 to 17¼c. for fine creamery; Townships dairy, 13 to 14½c.; Western, 12 to 12½c. per pound.

Dry Goods.—To-day, the 4th of August, is a pretty heavy one for payments of spring goods, sold four months from 1st April, and as far as can be judged from returns available at moment of writing, the proportion of paper met is hardly up to expectations; some of the larger houses who generally report 60 per cent. or upwards paid, not calculating on more than 50 to 55 per cent. Rumors of failure in the trade have unfortunately been verified by the suspension of the wholesale firm of R. Linton & Co. Active deliveries are being made of fall goods. City retail business is quiet.

Groceries.--The active distribution of sugars is well maintained, and local refineries are fully employed. The St. Lawrence refinery is producing considerable quantities of a grade of granulated, branded "German Refined," which is sold from the factory at 3⅝c. to meet the competition from imported sugars. Standard granulated is still quoted at 4c. per lb. to the wholesale trade, and yellows 3¼ to 3⅝c. Refiners seem to be stiffening a little in their ideas, and a slight advance is not deemed improbable in the near future, as the continental markets are reported much firmer, with a gain of four pence per cwt. for beet sugars within the last few days. Granulated in New York is now quoted at 5c. There is very little doing in teas at the moment. The failure of a jobbing house in this line is reported in our summary columns. There has been an invasion of Western canners this week, soliciting orders for new pack of vegetables, and quotations for wholesale lots range at about 70c. for tomatoes, corn 55c., and peas 67½ to 70c. Last year's pack of gallon apples are likely to be good property, and any stock in packers' hands is held firm at $1.50. There is active enquiry for California raisins, and a much larger business will likely be done in these goods this year. Some little damage is reported from the growers, but the crop is expected to be larger than last year. First arrivals are due about the middle of September, and are calculated to cost laid down in quantity about 5¼c. for three-crown, and 6¼c. for four-crown. The offerings of seeded California raisins will likely be much larger, owing to the favor they met with on their introduction last year, when they were put altogether in cartons, but this year they will also be put on the market in bulk. Dried apricots have been selling liberally at figures equal to from 8 to 9c. laid down; quotations for dried peaches have not yet been made, but cost here is calculated at about 7½ to 8c.

Hides and Tallow.—The market for green beef hides is fairly steady, dealers paying 8c per lb. for No. 1 and quoting 8½ to 9c. for cured to tanners, from whom the demand is but moderate; receipts are comparatively light. Calfskins are unchanged at 8c. per lb. for No.

The Canada Paint Co., Limited...

MIDSUMMER, 1897.

Buyers will not be Satisfied Unless at First Hands.....

* * *

Canadian buyers do not all know that THE ONLY COMPLETE PLANT IN THE DOMINION for the manufacture of Colors, Varnishes and Paints, is the plant of this Company.

We would not be "first hands" if we purchased our pigments and colors for paint manufacture.

Our Departments include the earlier processes of preparing the ingredients, and they are all conducted on the most approved methods.

The extent of our business enables us to place the highest available skill at the head of each department.

Our Departmental Experts.

1 and 6c. for No. 2. Lambskins are advanced to 35c. each. Tallow is dull and depressed, butchers only realizing 1 to 1½c. per lb. for their rough stock, while 3 to 3½c. is full quotation for rendered.

LEATHER.—The situation in this line is one of monotonous dullness, especially for black leathers. For dongolas and colored leathers there is a moderate request, and of sole there are fair sales from time to time, with a steady export movement to England. Considering the lack of activity, values are well held, and stocks generally are in quite moderate compass. We quote:—Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to 35c.; western splits, 20 to 22c.; Quebec do., 15 to 17c.; juniors, 14 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 12c; rough, 22 to 23c.; russet and bridle, 35 to 45c

METALS AND HARDWARE.—This week has been a very quiet one. We hear of the sale of about 150 tons of Hamilton pig iron, in small lots, at an average of $16 per ton. Scotch iron seems neglected Warrants are cabled a little firmer at 44s 2d. Terne plates are still very scarce and firm at $5.90 to 6 00. Other lines present no new features. We quote:—Summerlee pig iron, $17 00 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16 25; Ayrsome, No. 1, $16 50; No 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $17.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15 25; machinery scrap, $15.00; common do., $12.00 to 13 00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas, $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2 05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 35 to 3.50; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2.50; sleigh shoe, $1.85; tire, $1 90; round machinery steel $2.25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4.75 to 5.00; American spelter, $4.60 to 4.75; antimony, 8½ to 9c.

OILS, PAINTS AND GLASS.—Turpentine has made quite a strong advance in the South, and jobbing prices have been put up to 44c. per gal. for single brls. Glass, too, has been subject to advance, first break being now $1.30, second $1.40, and third $2 90. The market is stiffer in Belgium and Germany, where failure of some large manufacturers is reported. In other lines there is no change, and general business is quiet. We quote:—Turpentine, one to four brls., 44c.; five to nine brls., 43c., net 30 days. Linseed oil, raw, one to four brls., 41c.; five to nine brls., 40c.; boiled, one to four barrels, 44c.; five to nine brls. 43c., net 30 days; olive oil, machinery, 90c.; Nfld. cod, 40 to 42c. per gal.; Gaspe oil, 36 to 38c. per gal.; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½; No. 2, $4.25; No. 3, $3.87½; No. 4, $3.50; dry white lead, 4¼ to 4½c.; genuine red do., 4 to 4¼c.; No. 1 red lead, 3¾ to 4c.; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins; London washed whiting, 40 to 45c.; Paris white, 85 to 90c.; Venetian red, $1.50 to 1.75; yellow ochre, $1.25 to 1.50; spruce ochre, $1.75 to 2.00; Paris green, 12½ to 13c. in bulk; packages, 14c.; window glass, $1.30 per 50 feet for first break; $1.40 for second break; third break, $2.90.

TEN DOLLARS A MINUTE!
This is the average amount being paid to the Policy-holders every minute of every hour, of every day, of every week, the year through, by the
METROPOLITAN
Life Insurance Co. of New York
Assets, ... $25,592,003.78
The Metropolitan has $150,000 in Dominion of Canada registered stock on deposit with the Canadian Government, for the protection of Policy its holders in Canada.

Its great feature is its INDUSTRIAL PLAN OF LIFE INSURANCE

5 Cents per week (and upwards) will secure a policy
All ages from 1 to 70 are taken.
Males and Females insure at same cost.
Only healthful lives are eligible.
All policies in immediate benefit.

CLAIMS paid immediately at death.
No initiation fee charged.
Premiums collected by the company weekly the homes of policy-holders.
No uncertain assessments—no increase of premiums.

Think of it! The daily saving of FIVE CENTS will carry policies on the lives of every member of a family of SEVEN PERSONS.
Sixty Thousand Families will receive the proceeds of its Policies this year

Ordinary Department. The Company in this Department issues all the approved forms of insurance (and some novel forms of Policies) for from $1,000 to $20,000, premiums payable yearly, half-yearly or quarterly. The policies are liberal in their provisions, contain no restrictions as to travel and residence, provide for **immediate payment** of claims and the premium rates are extremely low. We invite comparison of rates with the rates of other companies.

Millers' & Manuf'rs Ins. Co

Established 1885.

HEAD OFFICE:
Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
Thos. Walmsley, Treas. Hugh Scott, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

Millers' and Manufacturers' Insurance Co.,
32 Church Street, Toronto, Ont.

THE ROMANCE OF THE COLONIES

Of British insular colonies there is one that has a literary and scientific interest as the home of Bernardin de St. Pierre's "Paul Virginia," and the scene of that author's most fruitful labors as a naturalist. We mean the Isle de France, or as it is now called, Mauritius. A still more illustrious name is associated with another island on the other side of Africa, St. Helena, the scene of the first Napoleon's exile and death. The settlement of that little island is strangely connected with a story of cruelty, illustrative of laws and manners happily of the past. Early in the 16th century, a Portuguese gentleman who had offended the fierce Albuquerque, or had committed some crime which brought him within range of the arbitrary laws of that adventurer, had been mutilated and sent home from India in disgrace. As the vessel in which he was returning was on its way northward, after rounding the Cape, the unfortunate man, Fernandez Lopes, begged to be set ashore on St. Helena, which had been discovered a few years before. The captain compassionately acceded to his request, and his friends having sent him out supplies by the next vessels bound for Goa, he labored hard at reducing a part of the island to cultivation, so that some years later when the Portuguese Government pardoned him and ordered him home, he left behind him many evidences of his toil and skill. The live stock and fruits of his raising were used for years for the refreshment of the ships that called there. In 1645 the Dutch took possession of St. Helena, but after a struggle that lasted for a quarter century or more, it remained in possession of the British East India Company until 1833, when it was given up to the Crown. At that time Major-General Middleton, of the soldierly family of Sir Frederick, was in command of it. The history of the Cape of Good Hope (first called Cabo dos Tormentos or Cape of Storms) is eventful enough. Like many another region, the names of which bear witness to generations of struggle, this colony was seized by British East India Company ships in the name of King James long before any attempt was made to colonize it. That was in 1620—a year of mark in American colonization. But as no attempt was made at settlement for thirty years, the Dutch, under John Anthony Van Riebeck, determined to found a colony there. It was not until the French revolutionary wars that England's attention was again directed to it, and in 1795 General Sir James H. Craig (a name not unknown in Canada) became its first British Governor. Having been restored in 1802, it was again taken in 1806, and has been British ever since. What between the Boers and the natives and Cecil Rhodes, South Africa has been a pretty troublesome possession, but its history, of which we know too little, has not lacked features of interest.

The coast of East and West Africa, for a varying distance inward, have a history that dates back to from three to five centuries before Christ. Their commercial and more lamentable relations with modern Europe began early in the 16th century—the Spaniards, Portuguese, Dutch, Danes, French and English building strong forts at points often fortified by nature. Just before the Queen's accession, Montgomery Martin wrote that of the colonies of England few surpassed those of West Africa in moral, commercial and political interest. He gives a most detailed account of them, mentioning, in connection with Sierra Leone, the transfer from Nova Scotia of the Jamaica maroons, and the homes provided for them in Freetown—the scenery, public works and social condition of which he describes with considerable enthusiasm.

The romance of Greater Britain has been in our day the fertile theme of some able writers—Haggard, Stevenson, Kipling, Conrad, Becke, Parker, "Ralf Boldrewood," and ever so many others. India, the West Indies, Australia, have long been familiar ground to the novel reader. The continent of Africa has been traversed in all directions under the guidance of the writer of fiction. Joseph Conrad has found a mine of romance in the islands, great and small, of the Indian Ocean. Malaysia and Burma have lately been discovered by the same class of explorers, and civilized and uncivilized. Polynesia has proved one of the richest bonanzas for the authors, publishers and readers of imaginary adventures. One of the pioneers of this class of fiction, Mrs. Brooke, chose for the stage of her love drama the Quebec of the years immediately following the conquest. Since her time (1745-1789) the field has greatly enlarged, while those who cultivate it have multiplied beyond reckoning.—*Montreal Gazette.*

A RECORD YEAR.

The chief feature of interest in the Board of Trade returns, issued on June 1st, is the large import of wood that took place during the month. On May 31st the total imports for the five months of the year was 993,628 loads of sawn and hewn, which received an access during last month of 897,272 loads, bringing the total for the six months up to 1,891,900 loads. Let us see how this compares with last year. Then the import up to May 31st was 1,012,166 loads, on June 30th, 1,802,052 loads, the increase for the last-named month representing 789,886 loads, being 107,386 less than that of last month. Though the June import has, as stated, been a heavy one, it is chiefly caused by the large shipments from Canada and the United States, as well as the Russian Baltic ports—the supply from Sweden and Norway during the six months being less than the corresponding period of 1896 by 129,622 loads. It is not surprising that the six months' import from Scandinavia should be less than that of last year, as the navigation opened a month later ; but during the last four weeks goods have been pouring in from the Baltic ports, and, though the month's trade from that direction is abnormally large, it has not equalled that of June, 1896, by 8,282 loads of sawn wood and 30,574 loads of hewn. The increase during June of sawn wood from British North America has been 198,890 loads.

At present the heavy Atlantic arrivals have turned the scale in favor of the present year by 89,848 loads. The exports of foreign timber give an increase of 1,148 loads for June, but on the six months' trading is short of last year's business by 1,859 loads. As will be seen, the total shipments for the half year of Canadian goods are nearly double what they were last year, and the United States have also considerably exceeded last year's supply, both sawn and hewn.—*London Timber Trades' Journal, 17th July.*

INSURANCE ON DISTILLERIES.

A discussion has arisen between several publications in the United States on the subject of fire insurance rates charged on distillery establishments in that country. Bonfort's *Wine and Spirit Circular* thinks them too high, while the *Insurance Herald* of Louisville, thinks differently. The former refers to the "extortionate rates" charged for insurance on distilleries. In the course of this discussion the *Herald* has quoted the *Chronicle* fire tables for 1896 on distillery fires for twelve years, to the end of 1895. These figures show that in twelve years there were 178 fires in distilleries, involving an aggregate property loss of $4,155,349 and an aggregate insurance loss of $2,751,001. The *Herald* had not at the time it used these figures received the volume for 1897, wherein the aggregate property loss on this class of risk is brought up to $4,242,024, and the aggregate insurance loss amounts to $2,868,961. From the reply to the *Herald* by the *Circular* we extract the following :

"For twelve years the aggregate insurance loss at the distilleries of the United States is placed at $2,751,001. Now, why didn't the *Herald* tell us whether this was the loss on distilleries or on distilling warehouses, elevators, cattle sheds, barrels, grain and whiskies ? The *Chronicle* says these losses were from 178 fires. If it refers to distilleries only, then the point against us is a good and strong one, but if it refers to all losses on buildings, whiskies, etc., then the statement strengthens our demands for lower rates."

The *Herald* says the reason why it did not tell the *Circular* that the loss quoted was on distilleries alone was because it did not know ; but such is the fact. In tabulating the figures, distinction is made wherever possible in every case. There is no summary for a number of years given of fires in warehouses (liquor) because the number of fires in this class of risk are comparatively few, but they are available from 1890. Thus the aggregate property loss for six years to the end of 1895 was $201,569, and the aggregate insurance loss to the end of the same period amounted to $132,335. In 1896 the loss was unusually heavy. The property loss for the year amounted to $601,985, and the insurance loss was $522,735. The total loss on this class of risk, distinct from distilleries, for seven years ending December 31, 1896, amounts to $803,554 in property loss and $655,070 in insurance loss. The other risks mentioned by Bonfort's are kept separate from distilleries, but they are bunched with elevators (grain), cattle and cattle sheds and warehouses (barrel), regardless of the business for which they are intended, so that the figures do not bear on the discussion beyond that they are carefully separated from fires in distilleries.

FIRE-PROOF WOOD.

At Hurlingham, on July 3rd, the British Non-Inflammable Wood Company gave an exhibition designed to demonstrate the security against fire of buildings constructed of timber treated by their process. The test was conducted on much the same lines as the trial which took place at Millbank in May, before the officials of her Majesty's Office of Works, and which was witnessed by the Prince of Wales. For the purpose of the experiment, two buildings, about 11 feet square and 30 feet in height, had been set up near the ornamental water. They were similar in all respects, except that one was made of "treated" timber, and the other of ordinary timber. Each was furnished with a chimney, for the purpose of creating a strong draught and facilitating combustion. Outside the little houses, on the windward side, was piled fire-wood and shavings, which were set on fire simultaneously. In five minutes the building of ordinary timber was well alight, and in about half an hour it had been reduced to ashes. But the other structure remained intact, save for the charring of the woodwork on the side exposed to the direct action of the flames. A further test had meanwhile been applied by igniting a pile of shavings and faggots inside, but again the effect was merely to char the wood, which did not break into flame. Indeed, a box made of the "treated" wood, which had been placed in the midst of the ignited firewood, was afterwards drawn out practically uninjured, and the souvenirs of the occasion which it contained were distributed to the spectators.—*Ins. Review.*

PINE DOORS.

United States and Canadian joiner manufacturers are working hard to secure as much as they can of the English trade in pine doors, and they are now quoting these goods at lower prices than Swedish deal doors. The present stock of pine doors, both in London and Liverpool, is, we understand, fairly light, but there is a considerable number on the way, a good many of which are to fill orders. The inventive genius of the American manufacturers is displayed in some of the special lines that are now being placed on the market in the form of improved doors with secret tenons, and window sashes, shipped in "knock-down" form to be fitted together on this side.

AN ASSESSMENT DECISION.

A decision was rendered a few weeks ago by Judge Cumberland in the matter of assessment by a Manitoba municipality. The decision was in the case of the appeal brought by the Manitoba Mortgage and Investment Company against the municipality of Strathclair for wrongful assessment. And it has an important bearing upon the system of assessment, commonly followed by the municipalities, their contention having generally been that a uniform assessment, irrespective of the value of the different parcels of land, was legal. The effect of the decision in this case by Judge Cumberland is, however, that this mode of assessment is illegal, and that the actual values of the lands shall be the values for assessment purposes For example: Some of the land, assessed at $4 an acre, was reduced by the judge to $1 an acre. The decision in question is likely to operate as a check upon lavish expenditures by the municipalities, some of whom, in the belief that they could raise the assessment to whatever figure they saw fit, provided they did not levy beyond the 2 per cent. limit as required by the Assessment Act, did not hesitate to demand from the ratepayer a tax that became a serious burden and operated against the sale of his lands.

The Land Mortgage Companies Association, composed of the representative land lending companies in the province, chose the lands in the above-mentioned municipality for the purposes of a test case. Hence this appeal. The decision meets general approval in Manitoba. "It has the elements of common sense and justice," says the *Commercial*. It has been the custom in many Manitoba municipalities to assess all lands at a flat rate, regardless of their actual value. Thus the owner of the poorest piece of land in the municipality would be assessed as much per acre as those who held the most valuable lands in the district. This made a great injustice to the individual.

DECISIONS IN COMMERCIAL LAW.

OMBERG v. UNITED STATES MUTUAL ASSOCIATION.—The Jefferson Circuit Court decided against Sallie Omberg, who sued the United States Mutual Association for a $5,000 accident policy on the life of her husband. It developed that the man died as the result of a musquito bite, and the lower court held that this was not an "accident" in the meaning used by insurance companies. The Court of Appeal has, in the opinion of Judge Hazelrigg, reversed the lower court and gives peremptory instructions for a judgment for Mrs. Omberg for $5,000, holding that the musquito bite was an accident.

DALE v. PEOPLE'S LOAN CO.—Appeal from judgment of Armour, C.J., in favor of plaintiff (claimant), in an interpleader issue directed upon the application of a sheriff who seized goods (certain furniture and animals) under the execution of the defendants (execution creditors) against one Thomas W. Dale, which were claimed by the wife of the execution debtor, by gift and purchase from her husband. The appeal was dismissed with costs, the Divisional Court holding that the purchase of the furniture by the wife from the husband did not come within the Bills of Sale Act, both the property and possession passing by the purchase. As to the animals, the court held that there was a good gift, completed by delivery, by the husband to the wife, as a wedding present, of the brood mare, the progeny of which were in question.

Mercantile Summary.

THE Stanstead, Que., Live Stock Association will hold its eleventh annual show on the 18th and 19th August.

THE Drummond Colliery has got their share of the Intercolonial Railway coal contract for this year, 25,000 tons.

IF the British Consul at Bagdad, Turkey, is well informed Batoun kerosene has driven the American oil out of the market thereabout.

THE German settlers of the colony of Springfield, Manitoba, settled a year ago, have each ten to fifteen acres under grain crop, the whole looking well and promising a bountiful yield.

A DESPATCH from Marquette, Michigan, dated Wednesday, says that the tariff of $2 on lumber has caused an advance in prices. Buyers there and in other lumber towns are taking all there is for sale.

THIS year's Sherbrooke Exhibition is fixed for the week beginning August 30th. One may always depend upon the Eastern Townships to make a good display at this fair, which seems to grow year by year.

THE Walkerton chair factory commences operations this week. The *Telescope* says it is filled with the very latest patterns of machinery. The intention of the directors is to confine themselves to some choice lines of high-class furniture, and not go into the extensive manufacture of common chairs and bed-room suites.

THE Londonderry Iron Company, Acadia Mines, N.S., offer for sale their large assortment of surplus machinery tools and appliances for use in the mines, rolling mills, blast furnaces, machine shops and railway work. The manager, Mr. Sutcliffe, tells the *Eastern Chronicle* that the business of this company has been carried on at a loss for several years past, and that the whole plant needs modernizing.

HOLLANDERS travelling in the United States cannot understand why so little use is made of windmills on the great central plain of the United States. A Hollandish engineer, who recently visited the *Milling World*, of Buffalo, asserted that the regular daily winds over the central prairies could be utilized to grind all the cereals grown on the prairies, and would be so utilized if Hollanders owned the region.

A WINNIPEG reporter was told by Mr. Wm. Mackenzie, the contractor, that work is nearly completed in the extension of the Dauphin road to Lake Winnipeggosis, and when it is finished the railway service will be extended to the end of the line. A party of engineers is now engaged surveying the Rainy River road, and their report will have to be considered before anything in the way of construction is done.

ELSEWHERE in this issue has been noted a gathering of wood-pulp men of Quebec and Ontario to deliberate upon the probable effect of the United States tariff on this industry. A meeting of Ontario lumbermen and mill owners is to be held in the Board of Trade Building, Toronto, on August 19th, to discuss the general aspect of the lumber trade, and also to consider the steps that should be taken by the Government as regards the export duty on logs and import duty on lumber. There will also be a proposition made to form a lumber association to further the interests of the lumber industry.

IT is asserted by the North Bay *Times* of 5th August that "coal exists in this part of the province," and the writer of the paragraph asserts that "the fact has been conclusively proven within the past week in defiance of the professional or other opinion that the stuff is not true coal, but anthraxolite. Notwithstanding the adverse opinion of geologists and would-be geologists, that it was impossible to find coal here, the Citizens Gold and Coal Co. of this place believed otherwise, and during the past few months have steadily persevered in the sinking of a shaft, determined to settle the question once for all. Last week at a depth of about 80 feet, they reached a bed of fine anthracite." Some of it was burned in a forge, and some in a coal stove; some welds were made with it, and some Old Country miners have examined it, and express themselves as "quite satisfied that it is high grade anthracite." The paragraph concludes with a statement that, in consequence, there has been a great demand for stock, over 10,000 shares having been disposed of.

THE Canners' Association of Ontario met last week at the Walker House, Toronto. W. A. Ferguson, president, in the chair. Reports were read respecting the crops from the different localities. The pea crop has suffered from the drouth and will be at least 25 per cent. less than last year. Strawberries will also be much less than the allotment. Corn, tomatoes and fruits will be a short crop. The apple crop will be very light, and not more than 25 per cent. of that of last year. In the Leamington district the peach crop will be heavy, but in the Niagara district it will be light, possibly an average crop altogether. It was decided, in view of the reports received, to allow each packer to use his own discretion as to the quantity to be packed and the prices to be charged.

COMMENTING on a despatch from Ottawa to a Montreal paper, stating that, the Prince Edward Island election being over, the construction of the pier at Summerside, for which tenders were invited some ten days ago, will not be let the Summerside *Journal* angrily says: "For political coolness, this certainly caps the climax. At the time tenders were called for the proposed work, we contended that the advertisement for tenders bore, on the face of it, strong evidence of being an election dodge or a political fake, and the above despatch is a confirmation of these suspicions." The *Journal* contradicts a further statement of the despatch to the effect that the work will be enormously expensive, neither the stone or the brush required in the construction can be obtained on the island

THE firm of H. Mortimore & Co., importers of elastic web, and dealing in Montreal, has dissolved partnership.——Two new industries have been started at St. Celestine, Que., one is a manufactory of carriages, conducted by Geo. Douce, and the other is a saddlery business to be managed by Cyprien Jutras.——G. W. McLaren has opened a drug store at Crystal City, Man; this is a branch of his Morden business.——Joseph Higginbothan has bought the jewellery business lately conducted by W. A. Crisp, at Portage la Prairie.——It is reported that the general store business belonging to Riddle & Davidson, at Longley, B C., has been sold out.——The Empress Tea and Coffee Co. has started a store at Vancouver, and Thorp & Co., soda water manufacturers in the same place, have opened a branch at Nelson.——The firm of Johnson & Nelson, general storekeepers at Westville, N.S., has been dissolved, and hereafter will be conducted by Nelson. From the same town comes the report that McQuaig & Johnson have entered into partnership in the men's furnishings, tailoring and boot and shoe line.

Mercantile Summary.

British trade, according to the July statistics, continues to expand, which may be fairly taken as an index to the improved condition of the world's trade.

A deputation of the Levis Board of Trade asked the Minister of Public Works on Monday that a wharf be built there to give greater facilities for the lumber trade. Mr. Tarte promised to see Mr. Blair and to have the desired work done.

The smashing on Tuesday last of four gates at lock 6 on the Welland Canal by the steamer "Brittannic" is a regrettable incident, for it stops navigation between Lakes Erie and Ontario for days, at a busy season of the year and an important time of shipping.

Another section of the weaving room of St. Croix cotton mill, Milltown, N.B., containing fifty looms, was shut down a week ago. The reason given by the management was that it is impossible to secure a sufficient supply of filling to keep all the looms employed.

The officials of the United States Treasury have decided to leave to the courts the disputed question of the date when the tariff Act took effect, but in the meantime will continue to treat entries of Saturday, the day the bill was approved, as subject to the provisions of the new law.

Land sales by the C.P.R. continue large The company sold 17,000 acres last month for the sum of $56,000, which is three times the quantity sold last year during the same month. The Canada and Northwest Land Co. sold during July 4,092 acres for $23,391, which exceeds the sales of July, 1896, very greatly.

These are great days for mineral "finds." An American exchange tells us that a rich lead mine has been struck in Main street in Joplin, Missouri, within a few blocks of the business centre of the town. H. D. Graves and Sam Vaughan, two miners who found it, took out at the depth of seven feet over a ton of ore. Machinery will be put in, and the mine will soon be in operation right in the heart of the city.

The August number of the *Industrial Advocate* tells of a new company called the Cheticamp Gold Mining Co., Limited, organized to develop the galena and silver deposits which have been located at Cheticamp, C.B. The capital stock has been placed at $200,000. The incorporators are Henry H. Harrison, James Harrison, S. M. Brookfield, of Halifax; J. E. Leadly, W. H. Weeks, M.D., Milton V. Grandin, of Dartmouth, and J. L. J. Chipman, of Cheticamp.

Mercantile Summary.

L. S. BONIN, of Montreal, an East end furniture dealer, has consented to assign, and shows an indebtedness of about $5,500.

BELLEVILLE's estimates for the year have been struck. Her citizens will be asked to pay twenty-two and one tenth mills in the dollar.

A NEW YORK telegram says that drought prevails in Corea to such an extent that, instead of exporting rice and other grains, it will be necessary to import cereals.

IT is said that all northwestern railroads of the United States will be in the midst of a car famine within thirty days. Every road is hard at work getting cars ready for the great rush of grain.

F. F. & C. D. KELLY, jobbers in fancy dry goods, Montreal, lately reported insolvent, are offering 30 cents on the dollar, 25 cents cash, and 5 cents their own notes. — Alex. Cowper, a manufacturer of bedding at Montreal, offers his creditors 50 cents on liabilities of about $2,800.

A TRIAL trip was made on Saturday last at Hull, England, of the twin-screw steamer "Prince Edward," built to the order of the Dominion Atlantic Railway, to run between Boston and Yarmouth. She made an average of nineteen and one-tenth knots per hour on her long-distance speed trials against a heavy sea.

THE following firms in Montreal have dissolved partnership: D. G. McBean & Co., commission merchants; Roy & Moreau, carriage dealers; Huot & Cote, electricians; Montreal Corset Mfg. Co., and in Quebec Cantin & Bresse, tanners, etc., have dissolved; also, at Knowlton, Que., Scott & Goddard, cheese box makers.

A FIRM of general dealers at Country Harbor, N.S., E. S. Sweet & Co,, have written their creditors, asking an extension of time, in quarterly payments spread over two years, and say, if pushed, they will assign, under which circumstances they will make preferences. They have been disposed to carry too much sail, and have been reported slow pay for some time past.

A STATEMENT prepared by Worthington C Ford, chief of the Bureau of Statistics, shows that the rush of importations into the United States during March, April, May and June, in anticipation of the enactment of the new tariff law, will result in an estimated loss to the Government of $32 666,427. The loss on wool duties is the largest, amounting to $24,027,941. Mr. Ford gives the opinion that about 10 per cent. of the increased importation is properly due to the improvement in business conditions generally. The total loss is estimated at $36,296,030, and with the 10 per cent. deducted, the estimated net loss is $32,666,427.

THE failure of two retail clothing concerns in Montreal is reported, namely, Israel Vineberg & Co., with premises on Notre Dame street, and Vineberg & Co., of St. Laurence Main street. The principals in the respective cases are Israel and Hyman Vineberg, brothers, and both doing business in their wives' names, on account of old troubles in Cornwall, in partnership, some years ago. It is now somewhat peculiar that they should again fail, separately, within a day of each other. Despite their unfavorable record, they apparently could readily command credit, several houses being interested for amounts above $1,000, and the liabilities in the first case are about $20,000, and in the second from $8,0[illegible]0 to $10,000.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT" By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

Less than six months ago Armstrong & Fearson were grocery clerks in New Westminster. They started on their own hook, with very little money, but any amount of competition to work against. Last month they gave a chattel mortgage and now they are calling creditors together.

In the manufacture of various grades of paints the mineral barytes largely enters, and Messrs. Henderson & Potts, of Halifax, N S., who have recently started a branch of their factory in Montreal are fortunate in the possession of valuable deposits of this mineral at Lake Ainslie, C.B., which are being thoroughly developed.

At its meeting on Monday last the board of directors of the Canadian Pacific Railway Company declared a dividend of two per cent. on its preferred stock, and 1½ per cent. on the common stock for the half-year ended June 30th last, payable on the 1st of October next. The total amount of this 1½ per cent. dividend will be $975,000.

Labrecque & Marcotte, wholesale small wares, Quebec, were reported a few days ago as asking an extension of time, but have now decided to assign. Liabilities are about $25,000, with nominal assets considerably in excess. ——Mrs. Labrecque, milliner, involved by the above failure, has also assigned, and owes about $3,000.

It seems a pity that anyone who has been in business since 1860 should, at this late day, be compelled to make an assignment for the benefit of creditors. But this is what Wm. McArthur, bookseller, at Dungannon, has had to do. In May, 1891, he effected a compromise with his creditors; but even the relief thus obtained has not enabled him to keep up.

The affairs of J. W. Lang & Co., grocers, have been adjusted. Those companies and firms who recently entered suit have decided not to go on with their cases. Part of the purchase money which had been paid over to Mr. Lang's brother-in-law, $10,000 we believe, will be placed in charge of Mr. Clarkson, and will be divided among the trade creditors, who may expect to receive 33⅓ cents on the dollar.

There appears to be a corner in turpentine. The Antwerp Naval Stores Company, the bull in the naval stores market, has succeeded in putting the price of spirits turpentine up to 26½ cents, an advance of 2½ cents from the time at which it entered the market. To put the market where it is, says the *Oil and Paint Reporter*, the Antwerp people must have bought over 30,000 casks of spirits during the past month, at about 24½ cents average.

The hardware firm of Dow & McDonald at Caledon has been dissolved.——The general store firm at Harriston operating under the style of T. Seli & Co. is succeeded by McCummon & Henry.——The machine shop owned by Phillips Bros. at Rat Portage has been sold to Woodley & Lang.——The Wm. Buck Stove Co., Limited, Brantford, is seeking incorporation——A winding-up order has been granted against the estate of John Beattie, of Fergus.

A demand of assignment has been made upon Isare Marchand, of Louiseville, Que. He was formerly quite extensively engaged in a general store business at Maskinonge, and afterwards went into milling and a general hay and grain trade, in which he became involved, the business eventually being transferred to his sons. ——Mrs. C. C. Martin, a very deserving widow, doing a millinery and dry goods trade in the same town, has become involved, and has had to assign.——A. Pare, general dealer at Roxton Pond, Que., has assigned, owing $4,500.

A tailor named George Taylor, doing business at Galt, has failed and made an assignment; so has a tinware merchant, at Drumbo named Wm. Kaufman.——The Waterloo coal firm of Hogg & Habbick, in business since 1891, is financially embarrassed. A statement submitted to creditors at a meeting the other day, shows liabilities amounting to $14,000, most of which is due to Hogg's father. An offer of compromise is under consideration by creditors.

The long-established business house of Laing & Meharry, of Port Perry, has come to grief. Some years ago the senior partner became involved in Toronto real estate transactions, which turned out badly and resulted in the firms' assignment in December, 1893. Since then they have tried to get "out of the hole," but the struggle has been too great, and again they assign, with liabilities amounting to $5,000. ——Chas. E. Shaw was at one time a druggist in Guelph and afterward started in Rockwood, under the style of M. E. Shaw & Co. Now they have assigned.

A question in customs law is brought up by the attitude assumed the other day by an American, who was returning from Europe. This man, so the Boston *Herald* says, soothed his conscience and saved his money by telling a New York custom house inspector that he had not purchased any clothing abroad. He had simply got trusted for a few hundred dollars' worth. It will now become the duty of the interpreters of the new tariff law to decide whether getting trusted for clothes is equivalent to purchasing them. It is stated by many experts in the tailoring business that it quite frequently happens that people who have their clothes charged never fully complete the transaction by paying their tailor bills.

East-bound all-rail shipments of dead freight from Chicago last week were 55,345 tons, against 49,126 tons for the corresponding week in 1896. Of last week's freight the Wabash carried 7,323 tons; Michigan Central, 6,284; Pan Handle, 7,016; Grand Trunk, 7,175; Erie, 7,065; Lake Shore, 5,513; Fort Wayne, 4,694; Baltimore & Ohio, 1,939; Big Four, 1,678. Lake and all rail lines carried last week, in addition to the above figures, 110,794 tons of east-bound freight, against 156,926 tons in the week preceding.

The Canadian commercial agent in Jamaica, Mr. Eustace Burke, sends a very interesting report to the Department of Trade and Commerce. He advises the Dominion to make an effort to prove to Jamaica and the other West Indian islands the volume of Canadian industry and Canadian enterprise. But most of his letter is taken up with the strain of every Canadian agent's quarterly reports, namely, that Canadian producers *must put up goods to suit the market*. Other nations do it, and so take the trade. The orange season is about to open with prospects of an extra crop. Owing to the United States tariff putting on a duty of one cent per lb., equal to $1.60 per case, Jamaica shippers may, perhaps, turn their attention to the Canadian market.

BOOK-KEEPER,

With good business record, would prefer change in position. References as to energy, thoroughness and reliability if desired. Ready at once.

Mercantile Summary.

A NUMBER of lumbermen gathered in Ottawa on Tuesday last, when the timber limits of McLachlin Brothers were to be sold. The property offered consisted of 1,021 square miles of limits in Ontario and 854 in the Province of Quebec. But there were no bidders, and the crowd dispersed.

Dun's Review for August 7th contains an interesting retrospect of the four years' career of that excellent journal. The course of prices of commodities is illustrated and failures analyzed in an instructive way in this issue. *Dun's Review* is edited with prudence and skill, and is a valuable abstract of business news.

THE effects of W. H. Coddington, maker of caps, in Hamilton, were disposed of by bailiff's sale.——L. H. Timmons & Bro., general dealers, Mattawa, unable to carry out the terms of their extension, have assigned. —— George Glass, grocer, Port Hope, and George Taylor, Weston, have assigned. — Charles Deverell, general store, Ravenshoe, asks a compromise at 40 cents.

TRADE in pine lumber in the Eastern States is quiet at unchanged prices, although there is an improved feeling among business men generally. At Tonawanda and Buffalo shipments have been increasingly active of late in order to rush lumber forward to destination before the increase of rail rates to the seaboard should go into effect. The *N.W. Lumberman* learns that there has lately been a fair demand for export lumber at Lake Erie points and Albany, and "generally trade is considered to have an enlarging tendency. Still, in the common qualities lumber is resting under the burden of Canadian stock which was rushed in and piled up in advance of the new tariff. In time this burden will be worked off and western lumber will then demand attention." The journal says "the wave of prosperity in the lumber business is swelling first, this year west of the Mississippi River, and especially in the South-west. The reason for this is found in the crop result, and the measure of increase in prices for staples that is being realized. The rise of demand is coming from the agricultural districts, and not from the towns and cities. Later the urban requirement will be heard from."

ROYAL VICTORIA LIFE.

It is evident from what we published the other day respecting the new life company about to be launched here, the Imperial, and from what we now learn of the organization meeting of the Royal Victoria, that Canadian business men are to-day more alive than ever to the importance of the business of life assurance, and determined to increase the proportion of it done by home companies. In twenty years the proportion of the whole life underwriting of the country done by Canadian companies rose from one-fourth in 1877 to nearly 60 per cent. in 1896.

Shareholders assembled in Montreal last week to complete organization and to choose directors of the Royal Victoria Life Insurance Company, Mr. James Crathern being chairman and Mr. David Burke secretary. Mr. Crathern intimated that of the million dollars capital stock authorized by the charter, the provisional directors had decided to issue to the public $500,000 at par. The whole of the amount had been subscribed, he said, in good hands, and over 90 per cent. had, on the call, been paid in. Directors were chosen as under:—MESSRS Andrew F. Gault, James Crathern, Hon. Sir J. A. Chapleau, Hon. L. J. Forget, Robert Mackay, Jonathan Hodgson, Hon. James O'Brien, T. G. Roddick, M.D., John Cassils, Samuel Finlay, Rev. R. H. Warden, D.D., H. N. Bate, Gaspard Lemoine, David Morrice, David Burke. This, it will be noticed, is a strong list of Montreal's leading men. The result of a meeting of the board was the choice of James Crathern, Esq., as president, Sir J. A. Chapleau and A. F. Gault, Esq., vice-presidents; T. G. Roddick, M.D., medical director; C. J. Hodgson, treasurer and acting secretary, and David Burke, general manager of the company.

MANUFACTURERS LIFE.

There is being held this week the decennial celebration of this company. The agents were brought together in Toronto on Wednesday last for purposes of conference, and after two days of discussing business went to Niagara to-day for an outing. On the first day, after addresses of welcome by the president and vice-president, the agents listened to a paper on "Impaired Risks" by one of the medical advisers of the company, Dr. J. F. W. Ross, while Dr. P. J. Strathy took for his subject "The Relation of the Medical Referee to Agents and Medical Examiners. Then ensued a discussion on "Local Agents—How to Find Them and How to Make Contracts With Them," which was much appreciated. In the afternoon, Mr. Sterling held forth on the "Relation of Agents to Head Office," while Mr R. Junkin, the superintendent of the company, gave his views on "The Development of a District," after which a drive round the city was indulged in. In the evening an enjoyable garden party was held at the residence in Rosedale of the general manager, where addresses were delivered by several fluent gentlemen connected with the company.

Yesterday's meeting was characterized by a discussion on "How to Retain Renewal Premiums;" and on the "Best Way of Soliciting Life Insurance." These were followed by an amusing illustration of canvassing the average man, introduced by Messrs. J. D. Robertson and R. A. Darker. The programme of the agents' convention, a neat production, bearing portraits of Sir John A. Macdonald, the first, and Mr. George Gooderham, the present president of the company, mentions something of a "Go-as-you-please — Toronto by Gaslight," which we do not understand. But one thing we can quite understand, namely, that such gatherings as these are good for the agent, and very likely to be good for the company.

—John Carter, a Toronto grocer, had James McIntyre up in the Division Court last week on a grocery bill which the latter had not been able to pay in full. As McIntyre admitted the claim, judgment was given against him; but Carter was severely censured by the judge for the methods he had employed while endeavoring to collect the debt. Carter had daily for ten days sent post cards through the mails urging McIntyre in the most insulting and threatening terms to pay him. The judge refused to allow costs.

Debentures.

Municipal Debentures bought and sold, also Government and Railway Bonds. Securities suitable for Investment by Trustees and Insurance Companies and for Deposit with the Government, always on hand.

THE SITUATION.

If the Attorney-General, at Washington, correctly interprets a discriminating clause in the new tariff, all foreign goods, not the growth of Canada, imported into the United States through the Dominion, must pay an extra duty of 10 per cent. This will affect goods brought by the Pacific steamers from the Asia, via British Columbia, and European goods passing through Eastern Canada to the Republic. This trade will be so seriously affected as to be nearly, if not quite destroyed. The declared object of the law is to encourage direct and discourage indirect trade. We did the same thing, when, through the Galt tariff, we discriminated against the tea brought into the country through the United States, and in favor of direct importation. This foundation stone of the National Policy was laid in obedience to loud demands from the city of Montreal, and in the face of equally loud protests against it by Toronto. The same thing, in principle, was repeated in the Foster tariff, which made the discriminating duty 10 per cent., an amount which Congress now copies exactly. Such devices, like curses, generally come home to roost, though they may take their own time in doing it. Apparently the bonding privilege, secured by the Treaty of Washington, will not be disturbed by the new discrimination. It might be well to see whether the treaty of Navigation of Commerce of 1816, not obselete, but in full vigor, has any bearing on the question. Probably it has not.

The Emperor William of Germany and the Czar of Russia, banquetting at St. Petersburg, drank to the success of each other's navy. This is their answer to the Jubilee naval display of England, and is practically a declaration that the two navies are one for possible purposes which these supreme rulers have in their eye, but which they do not express in words, outside of the closet. The German press is in no wise reticent, and does not stop to measure its language. It calls on these supreme royal personages to concert a plan for excluding British goods from their markets. The impotence of international malice, in some quarters, goes so far as to seek solace in imaginary schemes for the destruction and partition of the British Empire. In all such cases it is best not to answer a fool according to his folly. Words of hissing hatred blister and burn, and though anybody may be fated to have to listen to them, no one is obliged to imbibe their spirit or copy their form. It would be difficult to believe that the meeting of the two imperial despots bodes any good to the cause of liberty, which, rightly understood, is the cause of civilization.

Mr. Bertram's proposed substitute for an export duty on saw logs continues to find advocates. Mr. John Waldie, who is interested in Georgian Bay lumbering, favors it. The proposed export duty is for the time dead, though its advocacy might revive if the Ontario Government failed to respond to the demand that it shall require lumber cut in Ontario to be manufactured in the province. Mr. Waldie gives as a reason in favor of the substitute for an export duty, that the question being a local one, should be dealt with by the Local Government. His meaning must be that it is local in the sense of Georgian Bay lumbermen being chiefly interested. The tariff question is of course general, and other provinces besides Ontario are interested, but not to the same extent. It remains to be seen what view the Ontario Government will take of its duty in this particular. There is no political antagonism between the Ontario and the Dominion Governments to draw them apart and set them at cross purposes. Mr. Waldie favors restricting the action of the Provincial Government to timber cut on Crown lands. And as the author of the new plan of procedure gives that Government breathing time till next session of the Legislature, we shall not necessarily hear a definite response to the appeal for some time.

The opinion of the law officers of the Crown in England, on the bearing of the most favored nation clause in existing treaties upon the preferential item in the Canadian tariff, is that Germany, Belgium, and several other countries have the same right to preference that England has. With Germany and Belgium this will last only until the time for the expiration of the treaties comes, now less than a year. The effect of the obnoxious clause in the treaties with some of the other countries is little more than nominal. An opinion of the law officers of the Crown is binding on the British Government, but it has not the same effect on Canada, in all respects, as a judicial decision, and our Department of Justice may, as a matter of opinion, not fully concur in all the consequences which are supposed to flow from the interpretation that has been given. Under a law passed last session at Ottawa, a refund of duties to which any country may be entitled may be made. It is already decided that France, as well as Germany and Belgium, is entitled to the benefit of preference.

Recognizing the necessity of providing for the maintenance of law and order in the Klondike region, the Ottawa Government has decided to appoint an administrative officer to have charge of all officials there ; also to establish a law court for the administration of justice. The first of these positions goes to Major Walsh, who has seen service as commander of a division of the North-West Mounted Police, and who is represented as peculiarly qualified for the post ; while Mr. Justice McGuire, of Prince Albert, will fill the new judicial position.

A registration district for the security of land titles will be established. The civil authority will have the support of one hundred Mounted Police, provided with two Maxim guns. In this way, we may conclude, law and order will be efficiently maintained in that distant region. The Government has acted with the promptitude which the circumstances called for.

In the mining regulations of the Klondike, a further restriction has been made. The length of the placer mining claim has been reduced from 500 to 100 feet. Ths is equivalent to a slight decrease of the royalty, which previously ran from 10 to 20 per cent. of the product, in certain cases. A claim which yields $500 a week pays 10 per cent. royalty ; if the yield exceeds $500, in that time, the royalty rises to 20 per cent. This originally, and only a few days ago, had reference to claims 500 feet long ; by reducing the size of the claim to 100 feet in length, there will be five chances to one against the $500 figure rising, on any claim, to $1,000, in a week. As a consequence of reducing the size of the claims, a corresponding reduction of the royalty would seem to be in order. But even this would seem to leave the share demanded by the Government too high. It is inevitable, perhaps, that mistakes should be made by a government suddenly called upon to meet a state of things in which experience seemed to furnish no certain guide ; but it is better to err on the side of encouraging the prosecution of the mining industry than to run the risk of unduly depressing it. The whole weight of the royalty would, in any case, fall on the exceptionally rich claims.

A royalty on gold or any other mineral should, if possible, rest solely on an economic basis. It should be levied only on the surplus produce or net profit. But when it is levied on the gross product, the economic basis may be wanting, and it may in part or wholly come out of capital and labor. A certain, or rather a very uncertain proportion of all mining ventures fail to bring a return of the capital expended upon them ; and if we would arrive at an average of profit in mining we must take into account the unprofitable as well as the profitable ventures. The only real profit is the surplus that remains after all expenses, including losses, are paid. If a miner makes more misadventures than he meets successes, and his first $500 profit is taxed 10 per cent., the tax will in fact be paid out of capital, and not out of net profit. Whether it be possible so to arrange a bounty as to prevent such a result as this, is the problem. It is generally desirable, but not always possible to prevent taxes falling upon capital ; and in levying a royalty on the products of mines an attempt should be made to confine it to that portion of the product which represents a net profit, after allowing for interest on the capital, and the labor used in getting out the metal. The Klondike royalty, being levied on the gross product, makes no special allowance for either the capital adventured or the labor spent. If it be possible to cure this defect, it ought to be cured.

Exclusion of alien non-residents, which first broke out at Buffalo, shows a tendency to spread, and to disregard international lines. Contagion carried the epidemic to the British Columbia gold fields, and there are signs that the disease may break out on the Crown lands of Ontario which bear Canadian forests. The Ontario Government is reported to have under consideration the exclusion of alien non-resident laborers from this field of effort. The fault of this policy lies on its originators. The threatened retaliation is doubtless born ot efforts made by Americans to monopolize labor in our forests, by giving a preference to the product of labor in Canada, if the labor were exclusively American. Really it is time to ask who owns this country, and it would seem as if the Ontario Government were about to give the answer. We regret profoundly the necessity for any form of retaliation ; but there are some indignities which it is not possible to bear without making a practical protest.

APPEARANCES IN THE PRAIRIE COUNTRY.

That our great prairie country is steadily developing becomes apparent to any one who, having seen its condition a few years ago, makes a trip to the Pacific Coast now. There are evidences of prosperity nearly everywhere along the railway lines eastward, after leaving the Rocky Mountains. Recalling a similar trip made six or eight years ago, it is noticeable that while there are fewer horses now, there is a comparatively larger number of cattle grazing. East of Moose Jaw one can readily see that there is also a much larger area producing grain. While it is feared that the present season's yield per acre will not equal that of last year, still the increased acreage under cultivation, variously estimated at from 25 to 40 per cent., will much more than compensate for any difference in quantity. Besides this, some improvement in the price over last year is expected. Not less than 82 cents on cars, Fort William, has been paid within a few days for some of the best hard winter wheat.

In order to provide for the extra number of bushels of wheat to be grown, several grain syndicates have been organized this year, partly for the purpose of erecting additional elevators along the railway lines. A good deal of money has been thus expended, and quite a number of these buildings are already in course of construction, and some of them are nearly finished ready for the machinery. It is quite evident, too, that our prairie farmers have profited in a large degree by the sad lessons of the past. Experience has taught them that in this area their grain must be sown at the earliest possible date in the spring. The result of obeying the promptings of experience is seen in the fact that harvesting has already commenced in some districts in Southern Manitoba and Assiniboia, near Indian Head, Brandon, and Portage la Prairie. Farmers have also learned that it is unwise to depend solely upon their annual grain product. As already intimated, a far greater number of cattle are raised, not only in the western provinces, but in Manitoba, now than heretofore. Fortunately, too, in many districts the season of 1897 has been an unusually good one for grazing. Already a large number of cattle have been brought into fine condition for shipment, and it is said that train loads of them are now leaving Winnipeg every day.

Fortunately, too, this process of education in that dear and memorable academy, the School of Experience, has not been confined to the farmer in the West. Merchants out there have also been taught some valuable lessons—as to credit, for instance. They do not now readily part with their goods as they did some years ago, without an equivalent in cash or some other marketable commodity. There are, however, still occasionally found a few bankrupt estates to show that much more than capital and surplus have been absorbed by bad debts. But, happily, the number of this kind of statements submitted to creditors is yearly growing less.

The methods, or more properly, the lack of method, that characterized the olden time in this respect is gradually giving place to modern system, and trade in the smaller towns and villages is thus becoming much more healthy. There is a considerable improvement going on too, in the wholesale trade of Winnipeg and Brandon. In many instances the smaller Manitoba grocers are purchasing their supplies nearer home, and it is well that they should do so. In taking a hasty glance over the West, from the lakes to the Pacific, as the writer has done, one is impelled to the conclusion that Manitoba and the Territories, indeed, the whole western portion of the Dominion, is entering upon a period of more solid prosperity than ever before enjoyed.

MONTREAL HARBOR.

The delay in issuing the report for 1896 of the Harbor Commissioners of Montreal—it only reached us last week—is explained by the address of the chairman. That gentleman says it was held back because he was in hopes to include in it a favorable result from negotiations which have been going on, looking to the settlement of a comprehensive plan, which would provide for the future wants of the chief national port of the Dominion. This was not found possible, but Mr. Mackay finds ground of hope that proposed improvements will be soon begun. The report recites the agreement with the city about Plan No. 6, the authority given the board to borrow in 1891 and renewed in 1894, and in 1896 to consolidate their 5 and 6 per cent. bonds. The net result to the Commission was an increased authorization of $511,000 for work already done, and a lower rate of bond interest (3½ per cent.) than ever before. The bonded debt of the harbor is now $3,322,000 maturing from 1906 to 1921. Of this total $1,100,000 held by the Government, bears 3½ per cent.; $1,272,000, 4 per cent.; $700,000 bears 5 per cent., and the small remainder maturing in 1906, 6 per cent. interest. Of the four millions and more expended on the harbor since 1830 about $1,100,000 has been spent at Hochelaga and at Windmill Point, and $244,000 on the guard pier.

The traffic of the harbor in the season of 1896 was principally remarkable for the very large increase in exports, as compared with previous years; the import trade, however, showing some falling off. The total revenue was $258,131, and the ordinary expenditure $228,643. There was besides expended on capital account during the year $233,510. The new pier at Hochelaga was finished and will be of service to the lumber trade of the port, while the extension of Windmill Point basin and the new wharf 800 feet by 300 must prove of no small value to the coal trade.

Arrivals at the port, both of ocean going and inland craft, were much greater last year than in the previous year, and the aggregate tonnage was among the greatest in the history of the port, being 709 sea-going vessels of 1,216,468 tons, and 4,832 inland craft, tonnage 1,004,117. Dredging has gone on in Lake St. Peter, and among the work of 1897 is further widening and deepening of the St. Lawrence at Maisonneuve and Longueuil, also at Pointe aux Trembles. In view of the proposal to widen the channel throughout to 500 feet and deepen it to 30 feet, a new survey, it seems, will have to be made of the river between Montreal and Portneuf to connect with the recent surveys between that place and Quebec.

From some of the interesting pages of the report we gather that the export of lumber, square and waney timber to the United Kingdom and Continental ports was 219,032,178 feet board measure, an increase of 50,360,150 feet over the previous year, but to the River Plate the shipments were 7,790,166 feet, a decrease of 683,834 feet. The total of grain shipped was very large, being 18,902,047 bushels, a gain of 11,875,842 bushels on 1895. Of apples the increase was most remarkable, the total exported being 725,016 barrels, or 570,711 more than in 1895. The coal imports show a decrease from the United Kingdom and the United States, while from the Maritime Provinces the total imports were 669,386 tons, a gain of 47,647 tons. There were sent to the lower ports in 1896 from the Montreal wharves 336,348 barrels of flour.

THE BRITISH ASSOCIATION MEETING.

It was acknowledged by Sir Richard Temple, in his address on the occasion of one of the meetings in connection with the British Association gathering in Montreal in 1884, that its assemblage in Canada had proved a distinct benefit to that great Science Congress. "They had received benefit in the enlargement of their own ideas," he said, "and would carry away with them great instruction from all they had seen in Canada." If this were the case thirteen years ago, it should be still more the case to-day, for Canada has progressed in the interval; and moreover, better facilities exist for showing scientific visitors what we have that is worth seeing.

Montreal did things handsomely for the British Association meeting within her borders, and the Canadian Pacific Railway carried 150 of the members and associates to Calgary and back without charge, the road being then finished no further west. An excursion party for 300 was made to Toronto, and the Government of Ontario took a large party of them to Guelph to see the Provincial Experimental Farm. This year, thanks to the appropriations made, which we have already mentioned, towards the expenses of the gathering, and by reason of the arrangements effected for cheap travelling we may expect not only that Ontario will be more extensively traversed, but that the North-West will be seen to great advantage. If then, the scientists of the Montreal meeting were "instructed" and their "ideas enlarged" by reason of what they saw in 1884, we do not strain probability in expecting that the meeting of August 18th to 25th, in Toronto, and the accompanying excursions will have a like effect, perhaps in larger degree. Nor is it unnatural for us to speculate upon the good that may result to Canada from a short residence within her borders of so many distinguished and new observers in various fields of science. It has been remarked by the Montreal *Gazette* within a few days, that one of the noticeable things at the 1884 meeting was the way in which the curiosity and interest of the visitors was aroused by incidents and physical features that were to us commonplace or trivial. Thus we may in our turn be benefitted and our vision enlarged the better to behold our possessions.

If we give attention to the personnel of the visitors, so far as their coming has been announced, we find in the list many of the world's most distinguished men. The retiring president, Lord Lister, is one of the great names in surgery, for his anti-septic treatment of wounds has revolutionized surgical practice. And his successor in the presidency, Sir John Evans, in addition to his attainments and great distinction in geology and archaeology, is a hard-headed man of business, with large paper-making works near London, a past president, indeed, of the British Paper-Makers' Association. But in more than either of these, probably our interest will centre in Lord Kelvin, who has been so long part and parcel of Glasgow University, as Professor Thomson, that people have come to look upon him as a Scotchman, instead of, as he really is, an Irishman. His researches and inventions extend over the whole range of engineering and electrical science, and he has been termed the Prince of Physicists. His discoveries in natural philosophy, and his inventions of deep-sea sounding apparatus, have greatly helped the present world-wide system of ocean cables. Twenty years ago, when the writer had the privilege of seeing him at Glasgow University, he was engaged in experimenting upon the transmission of signals to be made from light-house to light-house around the shores of the British Islands, using for the purpose the characters of the Morse telegraphic alphabet, not electrically, but in the way of obscuring a light for a second or for five seconds to correspond in duration with the "dots" and "dashes" of Morse.

Then, in addition to the men we named last week, such as Prince Krapotkin, Edward Atkinson, James Bryce, Preece, Siemens, Maxim, there are to be Sir Charles Fremantle, the Master of the Mint; Marshall Ward, of Cambridge, the botanist; Ayrton and Perry, of the Central Institute, Kensington; Gonner, of University College, Liverpool, president in economic science and statistics, who will lecture in Massey Hall; Roberts-Austen, of London, who is to give a lecture on August 20th on the subject of "Canada's Minerals" Scores more might be named—for example: Ravenstein, F.R.-G.S., who is an authority on maps; Prof. Callendar, of McGill College, Montreal, a specialist in physics, more particularly thermometry; James Duncan, Comptroller of Prison Industries, Home Office; Rev. G. C. Bell, the master of Marlborough; Dr. Forbes, who is to lecture here to workingmen; Raphael Meldola, who first introduced the works of the German, Weismann to the British public; Prof. Greenhill, of the Artillery College, Woolwich; Prof. Henrici, vice-president of the mathematical section; Prof. Hudson, of King's College, London, and a great array of other mathematicians. Of the Canadian scientists we have not spoken particularly, but it is pleasing to think that representatives of our great universities of the Dominion will take no small part in the discussions with their learned brethren ot the United States and Europe, which this noteworthy gathering may be expected to provoke.

A DOUBTING THOMAS IN BUFFALO.

Some of the enemies of Canada in the journalistic field of the United States have fresh fuel added to their hate when they hear of anything to the advantage of the Dominion. This is especially true of the New York *Sun*, among daily newspapers, and of the Buffalo *Milling World* among weekly or monthly journals. The paper last-mentioned had recently a contemptuous and angry reference to a statement about the quality of Canada's 1896 wheat crop, refusing to believe what was said of its quality, scoffing at its alleged quantity, and sneering at Canada and Canadians. Persons so prejudiced are hard to convince of anything that it does not suit them to believe. Not with the hope of convincing the *Milling World*, therefore, but to add a little fuel to its anti-Canadian rage, we quote from a letter of last week, written by can stand all such abuse:

"The inspection report of 7,750,000 bushels of wheat of the 1896 crop, made at Winnipeg, is before me, and shows that 81.39 per cent. was inspected Nos. 1 and 2 hard, 8.92 per cent. No. 3 hard, 5.40 per cent. low grade and frosted, 4.29 per cent. rejected for dirt, smut, and heating. If any country in the world can make a better showing than this, with such severe grading tests, I would like to know of it. The 1895 crop, as shown by the Winnipeg inspection, was 52 per cent. Nos. 1 and 2 hard and 1 nor.; in 1894 crop about 85 per cent. was 1 and 2 hard and 1 nor., and in 1893, about 86 per cent.

"For the 1896 crop of wheat we had a storage capacity at Fort William and west of 14,999,300 bushels, an increase of over 1,100,000 bushels from 1895. This year the storage capacity will likely increase 1,500,000, as some sixty new elevators are now constructed, building, or under contract."

ASSESSMENT LIFE INSURANCE.

The affairs of the Massachusetts Benefit Life Association continue to attract much attention, both in the United States and Canada. A. S. Woodworth, a bank president, of Boston, is acting as trustee for parties in the concern who desire to make payment of call No. 103 and the extra call now due, upon a conditional basis of any sort. According to President Rolker, the directors were to meet about August 10th, "to decide the future of the association." The *N. Y. Spectator* of August 5th says:

"The general laugh continues to be directed toward the assessment and fraternal organizations in consequence of the general shake-up in connection with this class of institutions. The Massachusetts Benefit is trying to collect assessments on the escrow plan, but it is believed that not many will care to pay in money under circumstances so clearly implying a doubt as to the ultimate result. In Chicago the Royal League has had a royal good time in fighting itself in true fraternal fashion, the courts having been called in to decide that it was all right to increase the rate of assessments in an association specially gotten up on that very theory. It is a wonder the kickers did not ask the learned judge for a mortality table to fit in with the tender sentiment of the old song:

'Backward,turn backward, O Time, in your flight,
Make me a child again, just for to-night.'

"While the affairs of the Massachusetts Benefit Life Association are in the present disorganized condition, and while uncertainty exists as to the payment of the extra assessment to put the company on its feet, we are informed that persons holding overdue claims against the association are endeavoring to get a settlement of the same before the appointment of a receiver. We hear of claims being paid out on the basis of 35 per cent. of face value, and in some instances as high as 40 per cent. has been offered by officers of the association. It is generally believed, however, that if the association goes into the hands of a receiver, sufficient will be realized from the assets to pay cost of the receivership and about 60 per cent. of the claims. As it will take several years, how-

20x

A NOTABLE JUBILEE.

AN event that will have significance for many residents of this city, and for many merchants all over the Dominion, is the celebration this week of the Jubilee of the Establishment which has become so well known all over Canada as Rice Lewis & Son, Limited, Toronto. It is fifty years to-morrow, August 14th, since the house was founded, and we purpose giving a slight sketch of its lengthy career.

The founder of the house, that genial and enterprising Irishman, Rice Lewis, was born in Nenagh, County Tipperary, on 6th of March, 1802, and came to America in a sailing vessel when about forty-four years of age. Toronto had then but lately changed her name from York. She was known as the district town of the Home District, and for a time had rejoiced in the dignity of being the capital of the Province of Upper Canada. That dignity was taken from her temporarily in 1841, and conferred on the city of Kingston by Lord Sydenham, to be restored, however, a few years later.

ARTHUR B. LEE.

Among the hardware establishments then existing in the town were those of J. & P. Ridout, Peter Patterson, John Harrington, and H. S. Scott & Co., of which only one is now in existence. The last-named concern was a branch of a Quebec house, then and since well known. Rice Lewis reached Toronto in 1847, and liking the looks of the growing town, proceeded to negotiate for the purchase of Scott & Company's establishment. This completed, he named his store THE PADLOCK, the business being done under the name of Rice Lewis & Co. The second of our illustrations represents the building it then occupied; corner of King and Toronto streets. A few years later, in 1855, Mr. Charles William Lewis, a son of the principal, was admitted into partnership, the firm name becoming Rice Lewis & Son, and when Mr. C. W. Lewis retired to go into business for himself in New York, the father continued for a time alone.

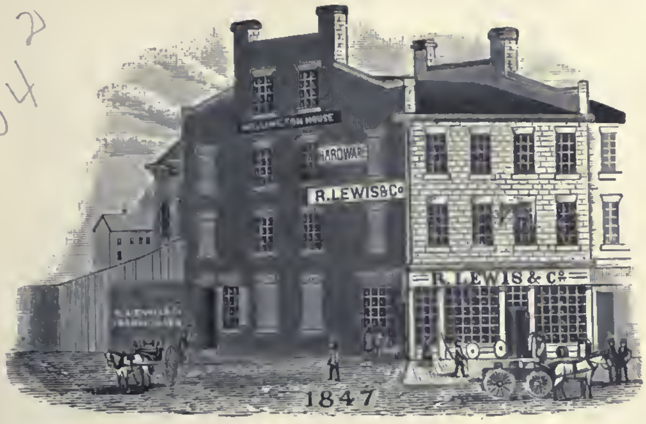
It was in the Confederation year, 1867, that a partnership was formed, consisting of Messrs. Rice Lewis, his son George W. Lewis, Arthur B. Lee, and John Leys, to carry on the growing business. Additional premises on King street adjoining to the eastward were secured, as shown in the last of our illustrations, and the new portion was styled THE BIRMINGHAM HOUSE, while the original stand continued to be called THE PADLOCK. It may be added that Mr. Leys had gone into the establishment as a lad in 1855, and worked up to a deserved partnership, which he retained for a quarter of a century. Mr. Lee entered the employ of the firm 5th May, 1856, so that his connection with it goes back more than forty years.

Mr. Rice Lewis died, full of years, in 1871, and six years afterward Mr. George W. Lewis retired from the business, which was carried on by Messrs. Lee and Leys. It was deemed expedient to transform the concern into a joint stock company, which was accordingly done in 1889, when the style became "Rice Lewis & Son, Limited," Mr. Arthur B. Lee being president, and Mr. John Leys vice-president. In that year the present handsome and commodious five-story premises on the corner of King and Victoria streets were completed, and the old store vacated. In 1892 Mr. Leys died, much regretted, and Mr. A. Burdett Lee was made vice-president, with Mr. Martin as director. Mr. Martin has been connected with the establishment since the 4th May, 1856.

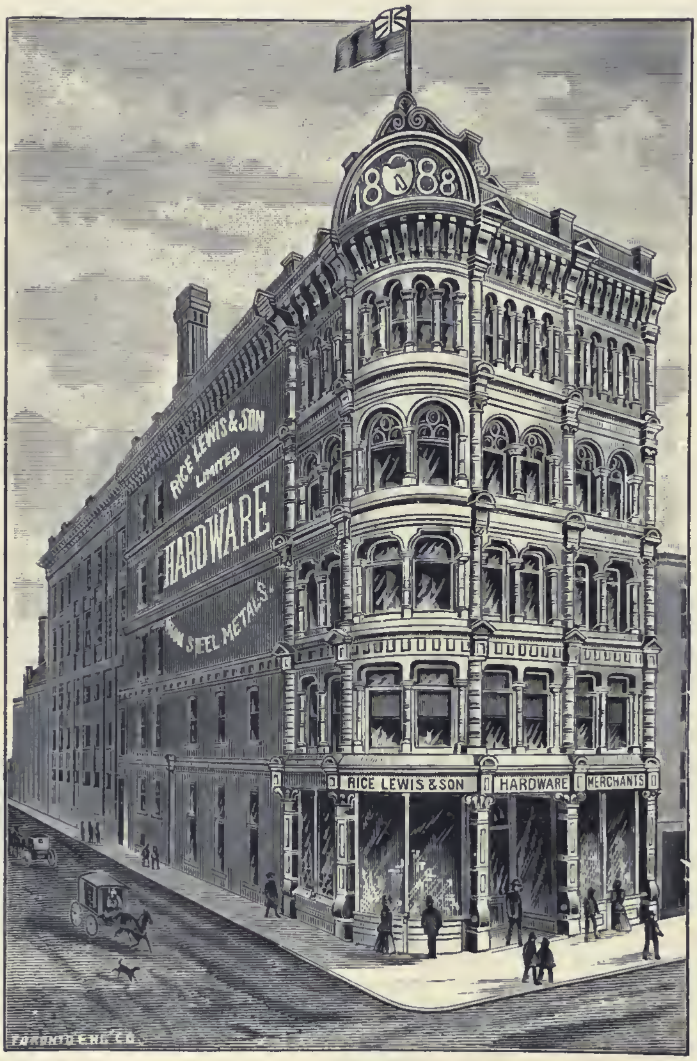
The general hardware business done by this house is of an all-embracing character. Indeed it has often been said, "You can get anything made of steel, iron or other metals, from 'a needle to a steam engine,' at Rice Lewis's," and it may with truth be added that if you cannot find it there, you are likely to look in vain for it in Toronto or Canada. For many years past this establishment has kept on hand a very large stock of bar iron of every shape and size. Of late years steel is very largely taking the place of iron. "It is only ten years," said Mr. Martin, "since I gave the first order for this house for a limited quantity of steel plate for boiler making, and I gave it with fear and trembling." To-day steel has almost entirely superseded iron for this purpose. The like change has come about in the use of thin sheet steel. The house is widely known as supplying contractors of every sort requiring metal materials or mechanical appliances, and it acts as agent for a great number of manufacturers in Europe and the United States.

As the Canadian field widened for the use of a better class of modern house-furnishing and decoration, Rice Lewis & Son have given greater attention to such goods as Brass and Iron Bedsteads, Bronzed Hardware, fire places, wood mantels. Still more recently they keep in stock and supply tiles for walls and floors of bath-rooms, vestibules and halls. Perhaps the latest feature in this direction is the fitting of kitchen floors and walls with tiles, a departure which bids fair to become popular. The most recent department added to the business is that of Sporting Goods. Fishermen and huntsmen and summer campers may here find their "impedimenta" in great profusion: while tennis and cricket, lawn bowls and lacrosse materials for summer, and skates, hockey sticks, and such materials for Canadian winter games, are kept in stock. As may have been discovered of late years at the Toronto Industrial Fair—where the firm has a building of its own—Rice Lewis & Son, Limited, keep the completest assortment in Canada of all the parts that go to the construction of a bicycle, though they do not deal in the finished article.

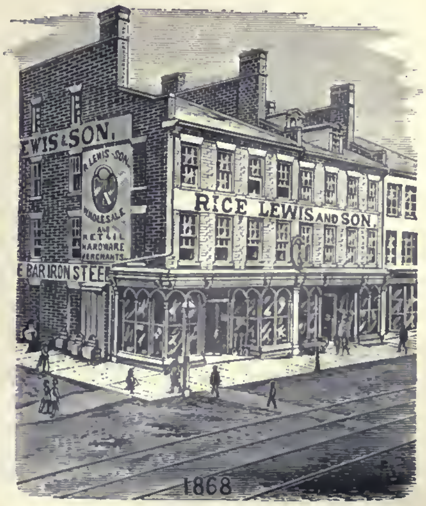
Not much space remains in which to describe the present premises of the firm, which may be truthfully said to be the most complete of the kind in Canada, framed as they are on the best models in the United States. The buildings, of brick and iron, of which our largest illustration shows the King street front, have a frontage of 50 feet on



King street by 265 feet on Victoria street, with an archway giving egress by Toronto street for the greater convenience of handling such heavy goods as chains, anchors, anvils, steel, etc. Our illustration shows that on the handsome front of the latest home of this extensive business the Padlock, emblem chosen by the founder of the house fifty years ago, is retained by its latest proprietors. May it, like the horseshoe of another time, continue to bring luck to the establishment. The figures quoted above do not by any means give such an idea of the extent of the place as a visit to one of the departments. To illustrate, suppose we take the top flat, the whole front part of which is devoted to gasfittings and steam fittings. Extending along the floor, and looking like a continuous long counter, are rows upon rows of bins containing hinges, etc., but at the sides are rows of 50 feet long and 15 feet high of shelving for joints, ends, nuts, valves, and all the endless variety of parts for brass and iron steam and gas-fitting. The house has the agency for Gardner's Governors for steam engines, a specialty which fills a large place in the economy of present-day steam using. Along the ceiling of this flat was noticed a great array of circlets of metal, resembling boys hoops, or small bundles of wire. Upon asking what these were, it turned out that they were Band-saws, used largely in cabinet factories and agricultural implement works. Rice Lewis & Son, Limited, are Canadian agents for the celebrated French house of Perrin's, manufacturers of band-saws. There is kept in stock by this Toronto house a great assortment of these band-saws, ranging from one-eighth inch in width to an inch and a half. They are adapted for any of the band-saw machines made in Canada or the States.



Seeing, in the section of one of the floors devoted to Bicycle Parts, one of the well-known Doolittle Automatic Brakes for bicycles, and remarking upon what was said in English journals about it, my guide replied: "Yes, we are selling agents for Canada for the Doolittle Brake." The rooms devoted to bicycle parts are interesting from the great variety they contain of big and little components of the "silent steed" that nearly every one now-a-days wishes to ride. Not far from this is the cutlery room, which is kept securely locked, doubtless because of the unusual value of its contents. Here one can find knives of all sorts and sizes, bread-knife or carving-knife, penknife or horse-clipper, and domestic cutting utensils, from the daintiest scissors for ladies' embroidery to the largest and most hungry-looking shears.



Nine housekeepers out of ten would, we think, if they had the chance, linger longest in the third flat, which is devoted to goods for house furnishing and decoration. The vestibules and bath-rooms, floored and wainscoted with tiles, the lovely wooden mantels and over mantels, dainty with carvings and gorgeous with vases—the cosy fireplaces with andirons and fender of brass to perpetuate the old-fashioned idea of fireside comfort, and asbestos gas-logs to introduce the new—the bronze Cleopatras and Christopher Columbuses that looked at you from the grate-covers—the bedsteads of shining brass and steel that make you sleepy to look at them. These, and much more, combine to give one the idea that he is at some rare exhibition, instead of in a depot of varied merchandise brought together for the advantage of Canadian buyers.

As has been said, the company has a large department of sporting goods. This embraces not only articles for indoor and outdoor games, but the impedimenta that a hunter or a fisherman takes when he goes to Muskoka or the Georgian Bay—canoes, paddles, hammocks, and tent equipage.

We are pleased to be able to furnish a good portrait of Mr. Arthur B. Lee, the present head of the house of Rice, Lewis & Son, Limited. He has been connected with the house for forty years—though one would scarcely believe it, to look at the man—having gone into the employ of the firm in May, 1856. Some ten years thereafter he became a partner in the firm, as we have stated. Few have been more assiduous men of business than Mr. Lee. His time is fully occupied with the affairs of the Harbor Commission, of which he is chairman; the Victoria Rolling Stock Co., the Bank of Hamilton, the Toronto General Trusts Co., and other bodies of which he is a director, in addition to the demands of an extensive importing and manufacturing business. At the time this notice is being written, he is on the Atlantic ocean, returning from a trip to the British and Continental markets in the interest of the house.

ever, for the receiver to liquidate the affairs of the company, those who are accepting 40 per cent. cash down evidently think that 'a bird in the hand is worth two in the bush.' Nevertheless the offers of the management show a desire to save the company if it is possible to dispose of the claims.

"The Royal Leaguers are truly 'children of a larger growth,' but sooner or later they will have to learn that in life insurance there are but two roads—begin low and end high, or begin high and end low. But there's no such plan as beginning low and staying there, unless, indeed, one stays out of the scheme.

"And then we have with us the International Fraternal Alliance, which, though dead, still lives in the vivid imagination of its Chicago representative. And the Kentucky Life and Accident is about to have a receiver, and Commissioner Dearth, of Minnesota, doesn't care to have a couple of Indiana assessment concerns play in either his front or back yard.

"The Maine Benefit Insurance Company, of Auburn, Me., is to absorb the Garfield Mutual Life Insurance Company, of Lewiston, just across the river. The Garfield was organized in 1892, and, at the present time, has about 600 policyholders. The assets, the $3,000 balance in the treasury, and the reserve fund in the State treasury, will all be turned over to the Maine Benefit. The reason for making the transfer was to give the policyholders of the Garfield better protection."

We learn from a New York despatch of 6th August that Rev. Thos. Haywood, chairman of the committee of policyholders, has stated that an old and reputable life insurance company stands ready to re-insure on favorable terms all the policyholders in the Massachusetts Company, regardless of age, and that the committee has about $1,500,000 of insurance which it will turn over to the company indicated.

And now we see it stated in the Toronto papers that Miss Matilda Thomson, of Hamilton, has issued a writ at Osgoode Hall to prevent the Massachusetts Benefit Life Association from levying any further assessments on the Canadian certificate-holders, and also to wind up the company, in so far as its Canadian business is concerned. The association has $100,000 of a deposit at Ottawa, and its chief agent is Mr. T. E. P. Sutton, whose office is at the corner of Adelaide and Victoria streets, Toronto. No doubt the $100,000 can be held here to settle all deaths which happen while the society is winding up. Even such a deposit is a good thing to have under the circumstances; but it should have been five times as large, and increased annually, to be of any benefit to the members as a whole. For want of a nail the shoe was lost, and for want of a shoe a horse and rider were lost.

ECONOMIC IMPROVEMENT.

The French economists are always well to the front as students of social science and observers of the signs of the times, though occasionally, it may be, their conclusions differ from those of other reasoners from like premises. Discussing recently the variations and tendencies of price in various articles of prime necessity during the past century, M. Paul Leroy Beaulieu, of *L'Economiste Francais*, reaches the conclusion that the impartial observer, whatever the source of his information, finds that the articles of current and popular use, both of food, clothing, and shelter, transportation and amusement tend to become less costly, and the populous class and the small middle class profit more and more by the general advance.

Another observer, in a different and distant field, Mr. E. S. Clouston, general manager of the Bank of Montreal, in his annual address a year ago to the shareholders of his bank, makes reference to the cheapening of the necessaries of life as a factor in the general situation that must not be overlooked. Laborers, artisans, mechanics, and, in fact, the people generally, Mr. Clouston then observed, were experiencing cheaper living than for many years. "Bread, meats, dairy products, tea, sugar, coffee, clothing of all kinds, in fact, all the necessaries of life, are obtainable at a lower basis of cost than before known in the history of the Dominion." He does not mention amusement, as the French publicist does—perhaps we Anglo-Saxons do not lay as much stress, theoretically, as we ought upon recreation as a factor in the life of a nation, whatever we may do practically—but in a previous paragraph he does touch upon improved railway transportation in America as having a good effect generally.

But what is the outcome of the altered conditions remarked by these two men? Clearly, it seems to us, that in spite of the undeniable loss sustained temporarily by producers of food and other merchandise through the steady lowering of prices for a succession of years, the mass of the people are benefited. The working man and the man of small or moderate income is certainly better off, in mind, body, and estate for getting his food, his clothing, his travelling and shelter for less money than before. Add to this the shorter hours of labor that recent years have brought, and the average man has more opportunity for rest of body and cultivation of mind, which are good things for us all.

THE JULY FIRE LOSS.

The fire loss for last month, as compiled by the N.Y. *Journal of Commerce*, shows a total of $6,626,300. This is lighter than the aggregate for July, 1896, as will be seen from the following table showing losses by months:

	1895.	1896.	1897.
January..	$11,895,600	$11.040,000	$12,049,700
February	12,360,200	9,730,100	8,676,750
March.	14,239,300	14,839,600	10,502,950
April	11,018,150	12,010,600	10,833,000
May	7,761,350	10,618,000	10,193,600
June.	9,223,000	5,721,250	5,684,450
July..	9,085,000	9,033,250	6,626,300
Totals	$75,582,600	$72,992,800	$64,566,750

But, however much disposed we may be to take comfort out of a reduced rate of property burning, the figures are still sufficiently appalling, exceeding, as the waste does, two millions per day. During July there were 132 fires of a destructiveness of not less than $10,000 each. They may be classified as below:

$10.000 to $20,000 loss..	54
20,000 to 30,000 "	27
30,000 to 50,000 "	24
50,000 to 75,000 "	9
75,000 to 100,000 "	2
100,000 to 200,000 "	12
200,000 to 600,000 "	4
Total number fires	132

The fire underwriters have had less reason than usual to complain, the above list being far less destructive than some previous months. The most important fires during the month under review were these:

Packerton, Pa., railroad storehouse	$250,000
East Angus, Que., saw and pulp mills	150,000
Peoria, Ill., grape sugar refinery....	600,000
Richfield Springs, N.Y., hotel and other......	150.000
Kankauna, Wis., paper mills	250,000
Yonkers, N.Y., hat factory and other	450,000
Montgomery, Ala., railroad property	100,000

The four larger fires in this list all involved practically full insurance, says the *Journal*, and some of the institutions writing risks equipped with automatic sprinklers were caught for liberal lines on the paper mill and the sugar refinery.

TIMBER IN BRITAIN.

A comparison of the quantity of hewn and sawn wood received at ports in the United Kingdom of Great Britain and Ireland,, more than one hundred in number for six months this year, compared with same in 1896, shows a perceptible increase in the first half of 1897. The total quantity of hewn this year was 1,138,577 loads, and of sawn, 1,890.900 loads, making together 3,018,477 loads ; while in the first half of 1896 there was landed 1,048,498 loads hewn and 1,802,052 loads sawn, making a total of 2,850,550 loads. We give below the imports at a number of leading seaports :

Port.	6 Mos, June 30,'97, Hewn & Sawn.	6 Mos. June 30,'96. Hewn & Sawn
London	581,338	602,328
Cardiff	391,601	356,636
Liverpool	285,928	247,817
Hull	214.221	202,648
Hartlepool (west)	154,009	126,903
Newport, Mon.	125,992	106,139
Grimsby	84.407	102,294
Glasgow	68,289	41,841
Belfast	63,037	41,445
Sunderland	60,108	51,343
Grangemouth	58.290	60,391
Bristol	50,417	36,322
Leith	46,170	48,642
Borrowstounness	42.552	44,137
Gloucester	39.257	46,919
Manchester	36,009	37,338
Swansea	35.155	44,636
Newcastle	26,829	67,309
Dublin	19.445	20,251

—A very gratifying improvement is shown in a comparison of the aggregate losses by fire in the United States and Canada last month and in two previous Julys.

PROSPECTS FOR DAIRY GOODS.

The London circular of W. Weddel & Son, from which we quoted last week, has the following :

"It may be taken for granted that the supply from the Continent of Europe and from the United States and Canada will increase in at least as great a proportion as the demand. If the import from Australia be much larger than last year, lower prices may be anticipated, and even if there be no increase in the import from Australasia it may be difficult to maintain values at the level of last season. An interesting feature for the Australasian butter producer is the fact that the Danes and Swedes are feeling the winter competition of the Australasian supply and are turning their attention more and more to summer dairying.

"The prospects for next season's cheese trade are more easy to anticipate than those for butter. In the United States, Canada. Holland, and the United Kingdom, the make is, and will most probably continue to be larger than that of last year, and as the consumption per head of population does not increase, it is only reasonable to expect lower values in the ensuing season than those now prevailing. Should an unforeseen drought occur in any of these countries then this estimate may require considerable modification."

AN IMPORTANT ELECTRICAL ENTERPRISE.

We have received from a correspondent at Rossland the following description of an important Kootenay enterprise :

The West Kootenay Power and Light Company, Limited. is incorporated under a special Act of the Legislature of British Columbia. Its promoter and organizer is Sir Chas. Ross. Bart., of Balnogown, Scotland. The company owns 200,000 inches water rights on the north bank of the Kootenay River. about seventeen miles from the town of Robson. It expects to develop at the start 5.000 horse power, and can indeed, without much difficulty or great expense, develop 50,000 horse power. The company has begun work and has 50 men employed at its works cutting out a raceway through the solid rock, and later on intends to have 200 men at work in placing the machinery and the water-wheels Its pole lines are now being cut from the works through to Rossland, and the proprietary expects to be able to deliver power to the mines there by November first.

The delivery of the power to the mines in and about Rossland will, it is said, reduce the cost of mining one-half, besides saving large sums of money on capital account for engines, boilers, and such machinery. The company is asked to furnish power for smelting and refining purposes by the smelters at Nelson and Pilot Bay, and if a smelter is erected at Robson it would be on the company's line to Rossland. The large mines in and about Rossland are negotiating for power to run their plants by means of this electric power. The plant of the company is located centrally, in the very heart of the great mineral zone of West Kootenay. The company will in the course of time deliver power all over the Slocan and the Nelson-Salmo district.

A strong syndicate in Montreal, headed by Chas. R. Hosmer, of the C.P.R. telegraph, is furnishing the large part of the funds for the company's plant.

The officers are as under : Oliver Durant, of the Centre Star Mining Company, is president ; Frank Paul, of Montreal, treasurer ; and J. B. McArthur, president of the Rambler & Cariboo Co., of the Slocan, is secretary. Charles R. Hosmer, William M. Doull, of Montreal, and Robert Jamieson and Sir Chas. Ross, of Rossland, are the directors of the company. It is regarded as the greatest industrial enterprise in British Columbia. The Canadian General Electric Co., of Toronto, has the contract for installing the electrical plant, and Stillwell, Breese & Co., of Dayton, Ohio, supply the wheels. All other work is being done by the company itself.

LARGE TRANSACTION IN ALUMINUM.

An unusually large contract has been closed by the Pittsburg Reduction Company to supply aluminum. The contract calls for delivery in London of 1,080 tons of aluminum casting ingots, as the Shipping and Commercial List is informed. The price is not made public, but can be approximately estimated from current market quotations in New York of 30 to 35 cents per pound, according to quality. At the rate of 35 cents the gross value of the contract would be $756,000. The largest previous contract was one of eighty tons, made with the German Government some time ago. The 1,080 tons are deliverable at the rate of twenty-five tons per month for the first two years, and twenty tons per month for the ensuing two years. The metal is purchased by and is to be delivered to the British Aluminum Company of London, one of the principal producers of aluminum in Europe.

Only a few years have passed since aluminum was practically classed among the precious metals, having a value nearly, if not quite that of gold. It has been greatly cheapened, and now, we are told, it has already distanced nickel in the amount of consumption, and will soon overtake brass. Aluminum sheet runs from 2.62 to 2.66 specific gravity. On the basis of their specific gravities, copper can be reckoned as being 3.3 times heavier and brass 3.15 times heavier than similar sections of aluminum. Practically all the aluminum in the world's market, up to and including 1895, was produced in France, Switzerland, and the United States. The three countries, with slight additions from others, produced in 1895 about 7,000 pounds daily, of which the largest amount was furnished by France, the next by Switzerland, with the United States as a close third. Each of these, as well as Great Britain, added largely to their aluminum plants in 1896, with the result that the output reached about 14.674 pounds daily.

Consul Germain, at Zurich, estimates that with the additions in Switzerland, the new plant in Norway, and the increased capacity of the Niagara Falls plant, belonging to the Pittsburg Reduction Company, the output of aluminum in 1898 will average 42,460 pounds daily.

FAILURE IN CREDIT INSURANCE.

As a result of an examination by the State Insurance Department, the Mercantile Credit and Guarantee Company of New York is to be placed in the hands of a receiver. The examiners found the company insolvent, and unable to meet its obligations, and its capital of $200,000 is impaired to the amount of $92.264, without including in the liabilities sums to be paid on account of losses yet to be determined. Its assets amount to $135.098, of which $129,850 are in stocks and bonds, and $5.248 in cash. The liabilities amount to $227,363, including capital. Chief Examiner Isaac Vanderpoel, of the Insurance Department, who investigated the condition of the company, severely criticised the company's purchase of $35.000

of the stock of an electric railway company, the market value of which Mr. Vanderpoel could not ascertain.

The company was organized in 1892 to transact the business of insuring merchants against loss in extending credit to customers, and had 250 policy-holders, all of whom will probably experience losses. The officers of the company say its failure is not to be taken as a proof that insurance of this kind is impracticable, it having proved successful in England; in fact an English corporation a year ago entered the field in this country with assets of $2,000,000. The hard times of the last four years have principally contributed to the failure of the collapsed company. A meeting of the policy-holders was held on Friday last in New York. A. C. Trowbridge presided, and after a full discussion a committee was appointed to confer with an attorney, and arrange for concerted action in caring for the interests of the policy-holders. An adjourned meeting of those interested will be held later to take action upon the committee's report.

The officers of the Mercantile Credit Guarantee Company at the beginning of the year were: William M. Deen, president: C. Vincent Smith, secretary; James W. Hinkley, treasurer. Notwithstanding the winding up of its affairs, the officers of the company express the belief that credit insurance is not unpractical. "Its non-success is attributed to the fact that it has not been developed long enough to furnish experience and statistics for the safe conduct of the business. There is, moreover, a credit company in England and one in St. Louis, which appear to be doing well."

THE MONTREAL EXHIBITION.

The authorities of the Montreal Exhibition are evidently anxious to have a worthy show this year, and are besides using every effort to get the exhibits ready in time for the opening on Thursday, 19th inst., the Monday following which is to be a civic holiday in Montreal. The main building promises to have a creditable appearance when the decorative effects are completed and the goods in place; the poultry building and the dairy building have been improved, and there are new buildings in which to display carriages and agricultural implements. The quarters for cattle, sheep, and horses have always been commodious.

Exhibitors began this week to get their wares in shape in the main building and a number of prominent manufacturers have their displays already complete. Among manufacturing exhibitors are: The Montreal Cotton Company, Dominion Cotton Mills Company, of Hochelaga, Halifax, Moncton, Brantford, Magog, Windsor, and Kingston; the Canadian Colored Cotton Company (Ltd.), of Hamilton, Cornwall, Merriton, and Milltown· the Penman Manufacturing Company, of Paris, Port Dover, Coaticook, and Thorold; the Gibson Cotton Mill, of Marysville, N.B.; the Canadian Rubber Company, Colin McArthur & Co., Singer Manufacturing Co., Viau & Frere, Bovril (Ltd.), Chas. Gurd & Co., Wilson, Villeneuve & Co., Montreal; Canadian Pacific Railway, Laprairie Pressed Brick Company.

Among Ontario exhibitors of manufactures, who are not conspicuously many, will be Christie, Brown & Co., biscuit makers; the Williams Manufacturing Co., M. Staunton & Co., paper hangings; Beardmore & Co., leather, of Toronto; the Oshawa Roofing Co., the Copp Bros. Co., and the Hamilton Cotton Co., Hamilton; D. W. Karn & Co., Woodstock; the Auburn Woolen Co., of Peterboro'; and the Trent Valley Woolen Co., of Campbellford.

Much will be done, we are told, to attract visitors in the way of what are termed "outside attractions." And much pains have been taken to secure a thorough illumination of the grounds and buildings by electricity, this procedure having been adopted in honor of the Jubilee year. The Royal Electric Company has, we understand, promised that the display in this respect wil be something unusually fine. Above all, it is hoped to have the Premier at the fair, and in that case to have a "Laurier Day." If this can be accomplished it will do more than anything else to attract a crowd to the exhibition.

An International Conference of Grocers is proposed to be held in Paris in the year 1900, in connection with the great exhibition during the summer of that year. Among the subjects suggested for discussion were lists of dead-beats, the hardships the trade is subjected to in the administration of pure food laws and other legislation.

ABOUT DRY GOODS.

Costumes in linen and pique are the rage at present in Paris.

Nottingham lace trade, and hosiery trade as well, are affected to dulness by the American tariff.

The worsted trade of Bradford has been very dull both on home and export account at the close of July. Woolens were also very quiet in Leeds, though the clothing trade was a trifle better.

The H. B. Claflin Co., of New York, has declared its regular quarterly dividend of 1½ per cent. on the common stock, and the regular quarterly dividends on the preferred stocks were due at close July.

A Paris fashion letter says that dress sleeves are made longer than ever, in spite of the excessive heat. They fall in wrinkles and points well over the hand. Sleeves to the elbow have quite gone out of fashion. Collars also continue to be very high.

The velveteen business is the only important branch remaining of Manchester's once vast trade in cotton goods with the States. The demand for bias velveteens has been very important for some time past, and several novelties have been brought out of late.

About half a-dozen of the more high-class houses in Glasgow and Edinburgh were already, on 29th July, making a feature in their windows of Autumn goods, but these are principally such as are associated with August pastimes and sports on "moor and loch." Of really Autumn "fashions" there was no indication.

Messrs. Scott, of Sackville street, Dublin, having applied to the court for leave to serve a writ for £17 out of the jurisdiction on an officer in Ontario, Judge Ross observed that the amount was small for such a course, and he thought that "the prices charged by tailors were intended to cover such possible losses as the present."

In the Manchester cotton trade the spinning branch is described as worse than three months ago, but an improvement in the Indian trade is noted. Hosiery was very dull at 1st August, and one can hardly wonder thereat when he learns that Chemnitz alone shipped nearly a million sterling's worth of cotton hosiery to the United States during the twelve months ending the 30th ult.

The *Draper's Record*, of London, England, learns that Mr. J. S. McMaster, of the late firm of McMaster & Co., Toronto, "is at present on this side, and that it is believed he is endeavoring to make some arrangements to go into the commission trade in Canada There is no question," adds that journal, "about the connection which he has on the other side, and the support he will receive if he starts."

No decision has been arrived at by the Custom House authorities in regard to the classification of silk ribbons. As stated in the New York *Economist*, silk ribbons are not mentioned in the new tariff. The Government appears to have abandoned its theory that ribbons should be classified under the head of silk piece goods, and is now considering whether ribbons should be assessed as trimmings at 60 per cent.

Harper's Bazar relates –or imagines—an amusing occurrence in a village of Northern New York. A merchant named Yardsley made a donation of a caster worth seventy-five cents to the minister, and put a tag on it marked $16. The modest minister, not wishing to have so expensive a thing on his dining table as a sixteen dollar caster, took the article to Yardsley's and traded it for dry goods. It is said that Yardsley's smile won't be able to be out again for six weeks.

The report of the directors of Rylands & Sons, Limited, for the June half-year showed a remarkably prosperous business. The surplus shown was £103,344. Out of this it is proposed to declare a dividend at the rate of 12½ per cent. per annum. This will leave £9,594 to be carried to the credit of the insurance fund, which fund will then stand at £106,245.

"Jeanne" says that in the French capital many blouses, which the *elegantes* prefer to corsages matching the skirts, are in white taffetas, and in white gros-grain. With these are worn a detached Empire collar, and the ties used are black and white, striped pekin, or plaid silks in all colors. The newest things in cravats, however, are made up in crinkled taffetas, *crevette* (a pale pink), poppy color, white and cornflower blue being the fashionable shades.

Having sent out enquiries to a large number of its subscribers in many States of the Union enquiring as to the condition of dry goods stocks and the probable requirements for this fall, the *Dry Goods Economist* has received sixteen hundred replies, the tenor of which "cannot but prove highly encouraging to all classes of the business community. It is evident that the dry goods trade of the country is better prepared than at any recent period to buy freely of merchandise, and that the conditions, present and prospective, are so favorable as to insure a ready distribution of such purchases."

"City Echoes" in the London *Drapers' Record* of 31st July has the following: "I understand that the Canadian creditors and the representatives of some English houses are making it rather warm at Toronto for the John Eaton Co., Limited, whose affairs have been recently referred to in the *Drapers' Record*. In the meantime they can do nothing, for the company assigned three weeks ago. It appears that the Canadian insurance companies are slow in their movements." The *Record* had not, apparently, been informed that the bulk of the fire insurance carried by the John Eaton concern was in American companies, known here as "underground" companies for the reason that they do not comply with the law and make a deposit in Canada for the safety of policy-holders. They are therefore in no hurry to pay claims, and cannot be compelled by law to pay them. Another thing: an inquest is being held by Government authorities into the origin of the fire.

The passing of the new American tariff has not caused any excitement amongst any of the manufacturers affected in Scotland, according to advices of 1st August. The effect was fully discounted beforehand, but will be none the less felt. Perhaps the linen industry will be most seriously affected, but makers are hopeful; some are even confident that in the finer goods, at least, if not in all, the United States market will grow steadily, rather than diminish. In Ireland, according to Belfast letters of like date, a more hopeful feeling prevailed in the linen trade consequent on the exact tariffs of the McKinley bill being made public. "Trade with New York for the past month has been very limited, and it will probably be a month or so before there will be any material improvement to record. . . . Makers of brown goods have experienced a very limited demand, and were certainly not over anxious for new business at the present low rates. The home trade in finished linens, which seemed to drop off last month, is again firmer."

FOR GROCERS AND PROVISION DEALERS.

Lard and lard products are dull and easier in United States markets.

The movement of hogs at principal Western points is leisurely this week, but the price is firmer.

Mr. Claus Spreckels has just paid duty to the amount of $39,040 on machinery of the value of $86,756, imported from Germany for the Salinas beet-sugar factory in California.

The Interstate Grocers and Merchants' Association, an organization of American wholesale and retail merchants, will hold a convention in St. Louis, August 17, 18 and 19. Special transportation rates will be allowed members.

The Louisiana orange industry has received a great boost [boost is a good word] by the duty of $1.50 per barrel, provided for in the new tariff law. In anticipation of this duty more than 100,000 budded orange trees have been set out in Plaquemine parish, and the company owning the largest orange grove in the State has planted 10,000 budded trees.

Commenting upon the effort made by Toronto retailers not long age to strike the department stores by means of a tax on their turnover, the *Maritime Grocer* says: "The merchants of Western Nova Scotia, and more particularly those in the Annapolis Valley, will be glad to learn of this organized effort among Toronto merchants. It has our best wishes for success."

A retail grocer near Philadelphia, who has been forty-five years in the trade, tells the *Grocery World* that all honor has gone out of the retail grocery trade. "It has become simply a wild, unruly scramble for a living, and average rate of profit is lower than formerly. I used to net 25 per cent. on my business twenty years ago. I scarcely average 10 now, and a year from now, if I am still in the business, I won't be making that."

Sugar in New York on Tuesday was quiet; raws were at a standstill, refiners being out of the market. Importers, however, expressed decided confidence in the future prospect of the market, and were as indifferent sellers as refiners were buyers, 3⅞c. being the lowest price they would name for centrifugals 96 deg. test. The feature of the market was the stronger European advices, but even in the face of these the demand for refined was less active.

The oil of the peanut, which is very much like that of the cotton seed, appears to be growing into importance as a product of the Southern States and is useful for many purposes. A large peanut oil factory has been built at Norfolk, Virginia. The product is sold as a table oil, as a base for soaps, and as a lubricant for confectioners, as well as makers of plug tobacco and machinists. Peanut oil will be refined for invalids, and the coarser material may still be pressed into cakes for cattle.

The *Maritime Grocer* tells us that R. Urquhart & Son, who have done a credit grocery business on Spring Garden road in Halifax for 43 years, have introduced the cash system. "This is the first firm of any consequence that has attempted to do an exclusively cash grocery trade in Halifax, and their success or failure will be watched with a keen interest by other tradesmen about town." Yes, and by other tradesmen in other towns, 99 out of every hundred of whom are dreadfully timid about attempting to sell for cash.

The Owen Sound Beet Sugar Company which has a charter, capital $150,000, 800 shareholders, $20,000 stock subscribed, is succeeding, says the London *Free Press*. It has agreed to raise, at least, 30,000 tons of sugar beets each year. The tests which have been made show that nearly 18 per cent. of sugar can be extracted from sugar beets grown in that locality. The company have an offer from a German company to put in a plant valued at $150,000 and take stock to that amount in the Owen Sound company, which, if accepted, will assure the enterprise being started in 1898"

There has been active movement in California raisins in New York this week; some dealers wanted to speculate in futures, but the growers declined to negotiate. Straight orders for between 30 to 50 cars, based on 3½c. for early October shipment, or as soon as the goods were ready to ship, have gone out to the coast, says the *N.Y. Bulletin*, The crop situation is still uncertain. According to some reports the output will equal, if not exceed that of 1895, which aggregated some 4,500 cars. Other estimates place the crop this year at not more than 3,500 cars, and possibly less, unfavorable weather being alleged.

SHOE AND LEATHER SCRAPS.

Beyond replenishing assortments there is in Eastern American markets little doing in tennis and sporting shoes. New samples are in process and embrace some novelties. It has been an exceptionally brisk season.

The fortieth anniversary of that sensible and respectable journal the *Shoe and Leather Reporter*, occurs this year. It is intended that a Jubilee Number shall be issued on September 2nd, and we may depend it will be an interesting one.

The United States Treasury Department decided on 30th July that calfskins were dutiable at 15 per cent. as "hides of cattle." Pending this decision the collectors at Boston, New York and San Francisco had construed the wording of the Act as admitting calfskins free of duty.

The Boston office of the *Reporter* says, last week, respecting rubbers: Numerous orders are coming in. Some factories are running continuously to meet the demand. This is accounted for by the fact that on rubbers delivered prior to September 15th there is an extra discount of 5 per cent.

In boot and shoe circles of New York city there has been a quickening in trade since the American tariff bill was passed. The tariff increases the cost of shoe materials, of cloth, laces, linings and silk. It will not amount to much per pair, but, as an exchange says, every little counts, now that the percentages of profit are so much reduced.

Joining in the very general chorus of hopefulness, which occasionally becomes boastfulness, indulged by the American trade press over the slowly improving prospects of business in the States, *Hide and Leather* of last Saturday says: "Business is steadily improving. Hides remain pretty closely picked up; leather is held firmly, and there is more inquiry for shoes, harness, belting, etc."

Narrow-pointed shoes and slippers are no longer fashionable, and the very latest styles are both sensible and becoming, giving sufficient breadth across the ball of the foot and having a rounded toe that is a happy medium between the needle-point and the square. Even in the cheap qualities of shoes the good shapes can be found now, if care be taken to chose those that have the soles broad, the uppers narrow and the vamps long enough.

The following pæan in praise of the good times supposed to be in sight in the States, is by one of the singers in the *Shoe and Leather Review*:—

> The good old times are coming from the north, and south and west,
> The orders will be crowding till there isn't any rest;
> We've only been a-waiting and a-breathing for a spell,
> But things are sort of settled, and we're feeling pretty well.
> The people ain't a going to take to wearing wooden shoes
> Just because there was a panic and the bankers got the blues.
> Our country's still as big, and strong, and rich as it can be,
> And the good old times are coming; just wait and you will see.
>
> The good old times are coming, and they're coming mighty soon;
> The trade winds are a-blowing like a regular monsoon;
> You can hear the wheels a-turning and hear the shoemen say
> They hain't felt so encouraged this many and many a day.
> Don't listen to the croaker, 'cause his liver's choked with bile;
> He'd sooner groan in misery than wear a pleasant smile:
> But join the glad procession and help to swell the song,
> The good old times are coming, and they're coming right along.
>
> A. H. L.

The latest we have seen about the crude rubber market is that in spite of the high values of Para business is improving and the market firm. A New York authority says that Centrals are in good demand but the supply is limited. Africans are selling better. The last cable from Para quotes that market at 9,850 to 6,250 reis for up river fine and coarse, with exchange at 7 5-16d. Quotations : Para Island, new, 84c.; up river, $86\frac{1}{2}$c.; old, 87 to 90c.; new coarse up river, 56c.; Island, $47\frac{1}{2}$c.; Nicaragua scrap, 50c ; Esmeralda, 53c.; Guayaquil, 39 to 42c.; African small ball, 38c.; soft ball, 31c.; Congo ball, 38 to 42c.; do. thimbles, 35 to 37c.; flake, 25 to 27c.; tongues. large, 42c.; small, 35c. Madagascar pinky, 61c.; Benguela nigger, 49c.; Sierra Leone, 30 to 50c.; Old Calabar, 39 to 42c.

ONTARIO CHEESE BOARDS.

The movement of cheese for the past week has been well maintained, the quantity boarded being 26,947 boxes at fifteen boards, where last week 26,427 boxes were offered at thirteen boards. Prices were higher and the quantity sold was probably 16,000 or 18,000 boxes, considerable sales being made at Listowel, which do not appear in the return. It is noticeable that at several of the boards every box offered was taken and that the prices were everywhere higher. Shipments of cheese from Montreal for week ending July 7 were 63,757 boxes, against for the corresponding week last year 70,222 boxes. Shipments to date this year were 896,179, and to like date last year 689,807.

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date of next meeting.

FIRE INSURANCE ITEMS.

Fredericton, N.B,, has arranged for the installation of a telegraph fire alarm system to cost $3,175. The apparatus has been ordered from an American firm.

The chief of the Winnipeg fire brigade will be present at the New Haven gathering of fire chiefs next week. There is to be an exhibit there of fire-fighting apparatus, and a discussion upon the supervision of electrical wires, in which latter subject Chief Rodgers is interested.

"One of the needs in accident insurance now," said a prominent underwriter in that business the other day to the *Chronicle*, "is completer co-operation [of the companies] toward preventing fraud. The companies lose thousands of dollars every year by fraudulent claims which a little information would prevent. The mutual accident companies have such an organization and it is a great help.

A few weeks ago the firemen attached to a station in a western town became so engrossed in a game of draw poker that the station burned down about their ears and they narrowly escaped with their lives. Last Sunday at Ottawa, Ill., the plant of a fireproof construction company suffered damage by fire to the extent of $100,000. The next thing in order, says the *Investigator*, is the spontaneous combustion of fire extinguishers. Then the ironies of fate will be complete as regards protection from fire.

BOOKS RECEIVED.

The Canadian Manufacturer.—A very convenient compilation for merchants and manufacturers is the issue of August 6th of the *Canadian Manufacturer*. It contains the latest Canadian Tariff; the United States Tariff; the British Tariff; the Newfoundland Tariff, and the British Merchandise Marks Act. The whole composes a volume of 130 pages, distinctly printed, and does credit to the journal which has issued it.

The Inland Printer.—Another issue of this always welcome monthly is out, the August issue, and another of the emblematic, enigmatic, provokingly occult title pages, which His Democratic Highness the Editor chooses, or his free-lance designers choose, to puzzle the uninstructed public withal. From the half-tones of the negro or Indian character, which Mac seems to prefer, down to the pictorial pleasantries and poster reproductions that are so delicately done, the *Inland Printer* is always a delight to the eye. But at page 508 of the present issue is a piece of color printing – a reproduction from coloritype plates in imitation of a carpet—which is marvellous for daintiness Typographically the number is fully up to the usual high standard As specimens of tasteful and ingenious type-setting, the advertisements on pages 513, 516 and 617 may be mentioned.

ANSWERS TO ENQUIRERS.

"Desirer" writes from London to know if it is true, as he has read or heard, that life assurance companies will not insure people who are going to the gold regions of the Klondyke. In reply, we would say that we have heard of such refusals by several companies, notably the Ontario Mutual, which last week refused four intending pilgrims to the Yukon, who applied in Ottawa for insurance. And we do not blame any life underwriter for refusing to receive the application of a man going to a country so remote, and so full of hardship and risk.

A. S., Montreal.—The company no longer does business in Canada. Its headquarters are at Newark, New Jersey. Its Canadian agency was in Toronto.

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, August 12th, 1897, compared with those of the previous week :

Clearings.	Aug. 12.	Aug. 5.
Montreal	$11,180,649	$11,655,666
Toronto	7,714,201	6,546,896
Halifax	1,542,013	1,334,030
Winnipeg	1,226,320	1,552,354
Hamilton	530,011	612,674
St. John	749,952	696,401
	$22,943,146	$22,398,021

Aggregate balances this week, $3,7566,28; last week, $2,919,838.

—Cases of embezzlement and absconding by trusted officials have been of late rather more numerous than usual, both in the United States and Canada. Perhaps the most conspicuous of these, from the extent of the defalcation, is that of the treasurer of the County of Simcoe, who is an absentee with a deficit of $62,857. And this deficit, it appears, is not a sudden thing, but has been the growth of years. In our opinion wilfully dishonest municipal officers are not numerous in Ontario, but there is an amount of carelessness and a lack of knowledge and of system in doing their official work which is disgraceful. One of the provincial Blue Books has shown this in a very strong light, a few years ago. While we cannot by statute cure dishonesty, where it exists among such officials we can do something by the introduction and maintenance of a proper system, and by regular inspection under that system. to prevent the growth of treasurers' deficits over a series of years. It would be, we should think, a great comfort to the treasury officials, and it would probably prove an enormous saving to Ontario taxpayers in the long run, if the Government should give Mr. Laing a good corps of assistants in the shape of expert accountants to teach township and county, town, and even city officials, here and there, how to keep accounts, how to answer letters, how to collect and remit dues. These and many other things some of them require to learn.

—The merchants of the town of Almonte have perceived the advantage of associating themselves for certain purposes, common to all, and held a meeting in the council chamber last week to give form to the "Merchants and Business Association" of that town. Its aim is "to foster and promote the best interests of the town ; to encourage cash business ; to correct abuses ; to promote a closer relationship in goodfellowship among the business men, and to encourage a greater interchange of commerce in our town." A constitution has been approved and by-laws adopted. The next move, presumably, will be to get a charter.

—A Board of Trade has been formed at Belle River, in the County of Essex, between Windsor and Chatham, under the name of the Belle River Board of Trade. On Tuesday last the members met and elected the following officers : President, M. L. Menard ; vice-president, N. Parent ; secretary, V. Cloutier ; Board of directors, S. A. Adams, N. Parent, C. McClosky.

OAK ISLAND BURIED TREASURE.

It appears that the company digging for the Oak Island treasure at Chester, Lunenburg county, Nova Scotia, have reached the strong oaken chest at the hollow of the deep pit. But as the workmen were to pry it open the sea rushed in and filled the pit. One of a few New Yorkers who spend their summers in Chester tells a New York paper a story derived from the former superintendent of the works, Mr. A. A. Tupper. This gentleman says: "Capt. Kidd was not the only pirate in the business in those days. What the country believes—and honestly believes—is that certain pirates, presumably Captain Kidd and his associates, did bury a vast sum of money and jewels on this island." About 1795 there were a few English, French, and Dutch colonists, and some royalists who had left the States at the close of the revolution. The names of three of these settlers were Smith, Maginnis and Vaughn. One day they visited Oak Island and while rambling over the eastern end came to a spot which held their attention. Vaughn, was a lad of sixteen. He described the events later in life to Robert Creelman. Mr. Creelman lives in Upper Stewiacke, Nova Scotia to-day. He is a reliable citizen.

"Smith, Maginnis, and Vaughn were attracted by a depressed spot at the eastern end of the island, that had been apparently cleared of timber years before. Nearby was an oak. On this oak were peculiar marks and figures. One of the larger branches extended over the circular depression in the land. The men returned the next day and began digging.

"A few feet below the surface of the earth was a well-defined shaft, with hard, solid walls, and in these walls could be seen the marks of picks, while within the space between the walls the earth was loose and easily shovelled. At a depth of ten feet they came to a covering of oak plank. The men kept at their work until the thirty foot depth was reached, and at each ten feet they found markings. At this point they abandoned the work, partly because it proved too heavy for them, partly because they could not procure assistance, owing to the superstitious beliefs of that day.

"Six or seven years later Dr. Lynds, a young physician of Truro, met Smith, Maginnis and Vaughn. They told him of their search for the treasure, and he became enthusiastic. Returning to Truro, the doctor organized a company and raised funds to prosecute the search. A gang of men went to work. Ninety feet down they struck a flat stone, about three feet long and sixteen inches wide. On this there were certain characters, and his reading of the inscription was:

"Ten feet below are $2,000,000 buried."

On a Saturday evening the workmen reached a depth of ninety-five feet, and left their work. On Monday they returned and the shaft was full of water. An effort was made to pump out the pit, but it proved fruitless, and it was decided to sink another shaft and tunnel under the "money pit"—as it was called. Work was begun, but after getting thirty or forty feet down the water burst in and the workmen had to give it up. Thus ended the operations of the first company.

"The next serious effort to recover the treasure was made in 1849, when another company was organized, in which Dr. Lynds and Vaughn, although well along in years, were interested. A force of men was put at work. What they accomplished can be vouched for by B. McCully, their manager, who is now living in Truro. The old money pit was tackled. It had in the course of years filled up. At a depth of eighty-six feet the water was encountered and a boring apparatus was utilized. The platform was struck at ninety-eight feet. After going through this platform and through sections of spruce and oak two feet below it, the auger dropped through twenty-two inches of pieces of metal. The auger failed to take any of it except three silver links, apparently of an old watch chain.

Eventually in the boring at a depth of ninety-nine and a half feet the auger came in contact with a chest or cask. Pieces of oak, metal, and a fibre resembling cocoanut fibre, were brought to the surface. James Pitblado was foreman of a gang of workmen at the time. John Gammell, of Upper Stewiacke, who was present at the boring, and who was a large stockholder in the company, said that he saw Pitblado take something from the auger, wash it, examine it closely and put it in his pocket. He declined to ask what it was, and as he was killed in a gold mine not long after the secret never came out. At last the old enemy, the inrushing water, put an end to the work of this company.

The next year work was resumed, and then for the first time it was observed the water was salt and rose and fell with the tide. This was important, for it led to the discovery of a subterranean channel connecting with the pit, and having its outlet to the sea at Smith's Cove, on the eastern side of the island. During the ensuing years up to the present time the work was continued along the line of the newly-found tunnel. The pits on the island have been the scenes of the greatest activity, and the effort now is to pump them out." "I think we'll do it," added Mr. Tupper, "and when we reach that oak chest—well, just wait."

—The chemical industry in the district of Mannheim is described as having had an extremely prosperous year in 1896, in spite of the severe check in the export trade to America, which it experienced during a portion of the year. Sixteen new factories were established, but they are mostly on a small scale, the aggregate capital being only about £1,000,000.

—A new ordinance "to enforce the regulations for the construction, repair, and security in this city" was passed by the Chicago City Council, June 21, but was published only in July. The ordinance provides for a board of nine commissioners to be appointed by the Mayor and confirmed by the Council. The board will be constituted of one alderman from each division of the city and one member from each of the following bodies: The Illinois Chapter of the American Institute of Architects, the Chicago Fire Underwriters' Association, the Builders' and Traders' Exchange, the Builders' Trades Club, the Real Estate Board and the Western Society of Civil Engineers. The commission will revise and compile the city building ordinances, and will also make such revision as may be necessary of the city fire limits.—*Investigator.*

AMICUS AND CELESTIAL PROVISION.

The Hayville philosopher, who occasionally writes, under the name of "Amicus," to the New York *Weekly Statement*, had the following in one of his letters to the editor, months ago:

Dear Sir,—Some of the comforting things to be found in the Good Book are responsible for much indifference. There is:

"The Lord will Provide."

What a nice line that is for a lazy, good-for-nothing, ne'er-do-well of a man.

A believer in this would toast his shins at the fire in winter while his wife was out doing a day's washing.

In its best sense the inference to be drawn from the line quoted is that the Lord will provide for him who endeavors industriously to provide for himself.

You probably have heard the story told of the old darkey who said as much depended upon the way one asked for things as on the getting of them.

"Now," said he, "if I ast de Lawd to send me a chicken, I doan p'raps get it. But if I ast de Lawd to send me fo a chicken, I gets dat chicken for de mawnin'.

Some years ago I wrote an answer to the statement "The Lord will provide." 'Twas thus: "Yes, a poorhouse for your kind."

That paragraph has lived in the press of this country, and I now frequently come across it in reading. It is an evidence of a belief in the conclusion set forth.

Then there is that other listless vagabond's comforter:

"Take therefore no Thought for the Morrow."

No man has been able to console himself with that for any length of time. It may tickle his fancy and revive a lazy hope for a moment, but the man who expects happiness and comfort knows very well that he must hustle.

I remember a religious daily newspaper published in New York, not many years ago, whose publishers used to hold afternoon prayer meetings and pray for advertisements and subscriptions to come in.

Did the prayers bring advertisements? Not in sufficient numbers, for the paper lost a lot of money, and then was discontinued.

If it had employed hustling canvassers for advertising, it might have had a more successful career.

The Lord does provide for those who have the eyes to see and the ears to hearken.

CHEMICALS IN BRITAIN.

The Manchester report of S. W. Royse & Co., dated July 24th, says: This has only been a moderate month in general chemicals. Shipments are fair, but the home demand, especially from the textile trades, is not satisfactory; some signs of improvement are, however, now noticeable, and there is a better feeling now that affairs abroad are becoming more settled. In the alkali branch there is a moderate business passing, and values are nominally unchanged. Exports of bleaching materials show a further decrease during June. Caustic soda has shown rather an easing tendency; ammonia alkali is firm at makers' prices; soda crystals and bicarbonate of soda are steady; chlorates of potash and soda are dull. The export returns for the first six months of this year, as compared with the corresponding period of 1896, show in alkali an increase in weight of 4,306 tons, and in value of £30,650, and in bleaching materials a decrease in weight of 3,220 tons, and in value £37,258. Acetate of lime is offering at rather lower figures for spot delivery; consumption in this district has latterly been less than usual; prices are steady in America, and there is reported to be no pressure of stock there. Acetate of soda continues very dull; acetates of lead have more enquiry. Sulphate of copper is inactive, and appears to have an easing tendency. Green copperas is firm and in rather short supply. Competition for borax orders continues extremely keen, and prices have been reduced further, but are now steady. Prussiates of potash and soda are moving slowly at steady prices. Tartaric acid is in good demand and is firm. Carbonate and caustic potash have a fair enquiry for spot delivery. In the tar products branch we may note a good business in solvent naphtha. Benzoles have again receded a little, and tempting figures have now to be named to induce buyers to operate. Creosote has been in demand for early delivery at good prices, and a fair amount of business is passing for delivery forward. Crude carbolic is only moderately active; crystals are a little easier. For pitch some makers have recently been talking of higher prices, but consumers have remained quite unresponsive.

As to minerals, there is nothing fresh to report regarding iron ore; prices are firm, and the imports continue to increase. They were considerably greater during June last than during June, 1896, and during the first six months of this year, as compared with the corresponding period of 1896, there is an increase in weight of 252,274 tons, and in value £345,004. Considerably more brimstone has been imported during last month than during June, 1986, but the imports during the first six months of this year are 1,198 tons less than during the corresponding period of last year. Values of Sicilian refined brimstone have recently been considerably advanced, following upon the conclusion of arrangements between the refiners and the Anglo-Sicilian Company, by which the latter now controls the prices. Phosphates of lime are quiet ; quotations are nominally unchanged, but concessions are made for actual business. China clay is being shipped freely from the mines, vessels being obtainable at moderate rates of freight, but the home consumption of the article is not large at present. Barytes is quiet. Ochres also are moving slowly.

THE DUTY OF HARDWARE MERCHANTS.

A paper read at the convention of theMinnesota Retail Hardware Association, by C. W. Aldrich, of Menneapolis:

My first instructions when starting out as a commercial traveller were to tell no lies in order to sell my goods. Acting under my first instructions as a travelling salesman, I shall at this time tell you no lies, but frankly say, believing that I might be called upon, I have penciled down the things I would say to you, and will read them, not asking that they be printed in the journal, as many of our Congressmen and Senators do. Whatever I shall say to you will be brief, and I hope none of you will be disappointed, for I am but a common commercial traveller trying to earn an honest living by honestly representing the interests of my employers.

It is not alone that you as individuals and as representatives of the Minnesota craft suffer from innovations and inroads upon legitimate trading, but your sister States, Wisconsin, Iowa, North and South Dakota and the entire country suffer in every branch of the business—manufacturing, wholesaling, retailing and consuming. Legislation and the enactment of laws to regulate and control business, both national and State, have been attempted, with almost barren results. Whatever of a national character attempted has failed of enforcement or in the secret chamber of consolidated interests been violated with impunity, as instanced in the law against trusts and secret workings to evade the Interstate Commerce law. State laws having in view a correction of certain evils and complaints have failed of enactment. It is a most difficult job to legislate commercial honor into any measure, corporation or individual when the dollars for a violation are many times greater than the dollars accruing from a religious observance of the law. Courts of justice are too often controlled by the almighty dollar to secure in many cases punishment of offenders. To me the only course left to pursue is the one found in the great moral law of right doing, and that must come from an educational movement in trade, and brought about by just such organizations as you will here form, reaching and extending to all branches of legitimate trading, working in unison and on harmonious lines of import. I am not one of those who believe there is no honor in their fellow-men, but as between honor and commercial trading there is a wide latitude. In the mad rush for business and trade, in the avaricious greed for wealth, moral actions count for little, and the broadest range is lent to the vested rights of trading. It is your province by and through the organization you will here effect, by the election of a corps of officers, the adoption of formal laws governing their actions as well as your own, to in a great measure correct many of the serious evils of trade that from time to time have crept into the methods of commercial dealings.

I take it as a self-asserted fact that you have no quarrel whatever with the manufacturer, the wholesaler, or the consumer. On the contrary, yours should be the closest of relationship as regards the law of barter and trade. Your general prosperity is the prosperity of the manufacturer and wholesaler, and as they treat with you honestly, fairly, equitably, and justly, so are you enabled to shower your prosperity upon the consumer, who alone is your support and in the finality the support of all those before you, commercially speaking.

What you complain of is that too often the manufacturer and wholesaler goes outside of the moral sphere of trading, seeking directly the consumer, or in an indirect manner furnishes his products to those who have first sought out the consumer and by device secured his cash, and then seek to comply with the contract. You complain, and justly so, of the wholesaler who tries the double act of wholesaling and retailing, who too frequently sells small, insignificant amounts to parties not regularly in the business, and whose work of selling only demoralizes the trade, and largely so through ignorance of the business. The catalogue dealer, that sapper and miner of your legitimate trade, who drains your community of its ready cash, leaving you but the credit factor to predicate your business upon, is your most mortal enemy, not that he is doing, or can do, better by your patrons than you yourselves are doing, or can do, but that in a wily way he befogs the mind of the consumer much after the manner of the departed P. T. Barnum, whose boast was that the American people liked to be humbugged, and it was his purpose to do it. He who supports the catalogue house, furnishes them with his goods, is your commercial enemy, and to him you owe neither friendship, allegiance nor support.

It is, however, your bounden duty as individuals and as an association to first labor with him, pointing out the wrong he is doing, and by friendly persuasion try to guide him to a right action, failing in which you can bring him down out of the tree by letting him entirely alone. You have no quarrel with Mr. Catalogue House, and when he is compelled to invest capital in stock, pay insurance, interest, freight, and labor bills the same as you do, his will become but an even chance with your own. Even to-day, with his stock largely in the hands of manufacturers and jobbers, counting qualities, freights, breakages, delays and annoyances, there is not one of you who for the strong factor, cold cash, cannot discount his offerings. Let me then say to you—not in an offensive way—slick up your stores, make them and your stock attractive, encourage your neighbor to do likewise, slick up your little towns generally, make them home-like, give cordial greeting to your country neighbor, invite him to a discussion of the questions involved, a comparison of notes, present the moral aspect and the economical questions involved, show him that when he comes to you with the strongest purchasing factor known, cold cash, you are strictly in it with a large percentage in his favor ; when you shall have done these things you will see a marked revival in your business, and that the catalogue man, like the morning dew before the sun, is growing beautifully less.

You must become proselyters in the camp of honest travelling educators among your fellow-men at home, persuaders with manufacturers and wholesalers. First try the highest law—moral suasion ; the drastic law when compelled to.

MR. GRAHAM FRASER AND FREE TRADE.

Mr. Graham Fraser, manager of the New Glasgow Works, who was in the city yesterday, in discussing the recent cut in wages at his works, said he was ready for free trade wages. The men should take Mr. Fraser at his word. Free trade England should be the guide. Let us see what "free trade wages" are like there. In a paper read before the Industrial Remuneration Conference in 1885, Sir Lowthian Bell, the president of the Iron and Steel Association, mentions a ship builder who in one year paid from 8s. 9d ($2.13) to 12s. 10½d. ($3.13) a day to all his skilled hands. Among them were men who made 25s. ($6.08) a day and 30 who were paid 20s. (4.87) a day. They were at work for 313 days in the year. At the rolling mills furnace men were paid 12s. 8d. ($3.08), and the head shearers 28s. 3½d. ($6.88) per day. The least experienced of the chief rollers receive 17s. 5d. ($4.23), and the best 40s. 11d. ($9.95) per day. The average daily receipts of fourteen men employed at the mills were 27s. 8d. ($6.73). Then it must be remembered the purchasing power of $1 in England is equal to $2 in protectionist Canada (this is doubtful, or rather it is an exaggeration) or the United States. Mr. Fraser says his argument at the next election will be "free trade at free trade wages."

U. S. TRADE WITH MEXICO.

The House at Washington last week passed a bill, reported from the Committee on Ways and Means by Mr. Dalzell, of Pennsylvania, authorizing the President of the United States to modify the operation of the law imposing discriminating tonnage dues on foreign vessels, so as to grant to vessels of a foreign country which imposes only partial duties on American vessels of imports equal privileges with those enjoyed by the vessels of the United States in that country. The necessity for this Mr. Dalzell illustrated by the facts connected with the coal trade in Mexico. The United States ought to control the coal trade in that country, but by reason of the existing law United States coal was shut out and Mexico was supplied from Wales. The passage of the bill would open Mexican markets to the coal of Alabama and of the Pittsburg district.

—Mayor Fleming, of Toronto, has been appointed assessment commissioner, with a salary of $4,000 a year. From the time the office became vacant it was recognized that Mr. Fleming could have the place. The delay arose out of his efforts to discover how much bigger a salary than his predecessor received he and his friends could, through their influence, secure for him. It showed Mr. Fleming in a somewhat new and decidedly unfavorable light.

—A Boston paper reminds its readers that, towards the close of July, the record between Queenstown and Boston, held by the Cunard steamer "Servia," which covered the distance in 6 days and 18 hours last year, was beaten by the Dominion Line steamer "Canada," which made the run from Daunt's Rock, Queenstown harbor, to Boston in 6 days 15 hours and 31 minutes.

—Here is a warning needed by a certain kind of scoundrel. The story is told by the Huntingdon *Gleaner* : "A slanderer of the character of a young woman, the daughter of a respectable farmer in Hinchinbrook, was brought to book by Mr. McCormick, Q.C., with the result that the defamer acknowledged under his signature he had aspersed her life's reputation without the slightest cause, and agreed to pay $450 in settlement. As neither she nor her father would touch his money, $150 of it has been paid into the funds of the Huntingdon Academy. Mr. McCormick has done a service to society in teaching young men who speak lightly of women that they can be made amenable to the law and compelled to pay sweetly for their assertions." '

A DECADE IN U. S. PETROLEUM PRODUCTION.

According to the statistics issued by the United States Geological Survey, of which Charles D. Walcott is director, the production and value of the crude petroleum in the United States for the ten years from 1887 to 1896, has been as follows:

Year.	Production Barrels.	Value Dollars.
1887	28,278,866	18,877,094
1888	27,612,025	17,947,620
1889	35,163,513	26,963,340
1890	45,822,672	35,365,105
1891	54,291,980	30,526,553
1892	50,509,136	26,034,196
1893	48,412,666	28,932,326
1894	49,344,516	35,522,095
1895	52,983,526	57,691,279
1896	60,960,361	58,518,709
Total	453,379,261	336,378,371

The above figures include the total production of all kinds of mineral oil in the United States and are approximately correct. Estimates were made in many instances, but we are assured that they have been based upon the best data obtainable, and for all practical purposes they may be regarded as reliable. It will be noticed that the production for 1896 is the greatest of any year in the history of the oil-producing business. Of the total production of that year 31,000,000 barrels were pumped from the Pennsylvania oil fields, and about 24,000,000 barrels fom the oil fields of Ohio and Indiana. This leaves about six million barrels to be credited to the scattered producing section of California, Colorado, Kansas, Wyoming, Kentucky, Tennessee and other States where oil is found in merchantable quantities.—*Paint, Oil and Drug Review.*

THE PROBLEM OF MAPLE.

A considerable discussion has been going on in manufacturing circles in the States in regard to the merits and demerits of maple as a cabinet wood. Among other charges laid against it is that it comes apart at the joints and shrinks. These charges are only partially true. The great trouble is that because it is a cheap wood it has been treated in a cheap way, to the detriment of the finished article. It is more often than not rushed in dripping wet to the saw and from there rushed to the dry kiln, and when it is dry on the outside it is worked up and put together with poor glue, and in a little while the joints open and the tops heave and other defects appear. This wood has been used in the past for the finest work, and there is plenty of it standing in good shape from twenty years and upward in age, but it was worked properly. It was first thoroughly seasoned, and when put together only the best glue was used. It is a very close grained wood, and requires the best of glue and appliances. However, after all has been said and done, the work has little life in it, and unless it is daintily embellished with carvings and trimmings, makes at best a not very attractive appearance. Another thing that tells against it is that, unlike oak, mahogany or walnut, it does not improve with age. The great field for this wood, leaving out the side possibilities of bird's-eye and curly grain, is in using the wood stained in imitation of other more attractive woods like curly birch and mahogany.

There is likely to be a pretty well defined movement in favor of mahogany as against curly birch. The difficulty of getting a uniform tone to the finish of curly birch is bringing it into disrepute for fine furniture. The difference in shade is not the only drawback to it, for it will come out in different colors, throwing pieces out of all harmony with each other. On the other hand if mahogany comes out a shade lighter or darker the difference is not so apparent, for the color is still mahogany color. For this reason the latter wood is coming strongly into favor for fine furniture.—*Furniture and Upholstering Journal.*

LOOK TO THE FIRE ESCAPES.

The recent fatal accident to an unfortunate fireman, through a fire escape defect at Newcastle-under-Lyme, has hardly, perhaps, excited quite the general interest that it merits from a fire underwriter's point of view. It is true that the fatality occurred in connection with some work in progress for the late Diamond Jubilee festivities, and had nothing actually to do with a fire. The disaster, however, was the means of showing that the fire escape was not really trustworthy, and we fear that this is the case with a great many other machines all over the country. The fact is, to our thinking, the so-called fire escapes of the day are very far, indeed, from being up to date in any true sense of the phrase. They are too often more or less inefficient machines on old-fashioned lines, and are, for the most part, quite unworthy of such an age as that in which we live. As the present tendency to high building still further develops, as it is bound to do, we shall need much better arrangements for doing the work hitherto entrusted to the normal fire escape, and something on very much more scientific lines will have to be provided, and that on an extended scale, to meet the demands likely to be made by the increased fire risk that naturally belongs especially to lofty buildings.

TIMBER TRADE NOTES.

The large importation of wood for the first half of the year is attributed to the heavy shipments of pine and spruce during May and June. These, it is stated, will represent the bulk of the season's supply, but they have caused a decided flatness in the market. Spot prices in the London market have undergone little or no change, but business has been quiet, which at this season is not unusual. The dock companies have their hands full in dealing with the new goods, which have to be landed and piled, and for which delivery cannot be calculated upon for some weeks to come. At the auction sale of Baltic and other soft woods, held on Thursday last in Winchester House, prices were in harmony with the general lassitude now pervading the market.

AMERICAN FARMERS PAYING OFF MORTGAGES.

Farmers in Illinois and the Middle West are making money and paying off their mortgages. That is the testimony of Chicago men who loan millions of dollars on Western farms. From reliable reports that are based on figures, and not on political sentiment, it is very evident that the farmer is making more money than the men engaged in mercantile and manufacturing pursuits. One Chicago firm reports that 60 per cent. of the mortgages placed by his firm are paid off when due, while another declares that his company has not foreclosed on a farm in Illinois, athough it has loaned $8,000,000 on farms in this State. The conditions in Iowa and Wisconsin are almost as favorable. —*Chicago Times-Herald.*

SCOTCH IRON TRADE.

According to advices from Glasgow under date 30th July, from the circular of James Watson & Co., the pig iron market was quite idle that week, outside speculation being dormant, but a steady undertone prevailing. There was a little more business doing with consumers for early deliveries of foundry and forge qualities, but the steel works hesitate in making fresh purchases owing to the position of the engineers' dispute.

Middlesbro' G.M.B., f.o.b. Tees, No. 1, 42/; No. 3, 39/9.

The shipments of Scotch iron from 1st January to 25th July this year were 152,426 tons, as compared with 162,987 tons like period 1886. Of Middleton iron shipments were 725,507 tons, against 628,598, and of Cumberland 249,932, against 180,610. The stock of Scotch pig iron in Connal's store, 29th July, was 353,042 tons, as compared with 363,519, and of Cleveland iron 100,177 tons, as compared with 194,091 tons. Furnaces in blast numbered 79 against 75 a year before in Scotland; 93 against 95 in Middlesbro' district; 38 against 37 in Cumberland.

Commercial.

TORONTO MARKETS.

TORONTO, 12th Aug., 1897.

DAIRY PRODUCE.—One would think that our remarks in this column last week on dairy butter had been pretty generally read throughout Ontario to observe the manner in which shipments of butter have been made in the interval. The receipts at this point have been very liberal during the week. It appears that country merchants are getting tired of holding in order to obtain higher prices for "run lots." Then again there is such a thing as the country dealers becoming overstocked, because at this season and in the present condition of the pastures farmers are no doubt marketing considerable quantities. Prices for good quality remain firm, but lower grades are weaker than usual because of such larger stocks accumulating. Best dairy in tubs is selling at from 12 to 13c., and No. 2 tub from 8 to 9c. per lb.; pound prints, dairy, 14 to 15c. Creamery butter is in first rate demand for both local and export trade. Tubs are fetching from 17 to 17½c., while pound prints are worth 18 to 18½c. Cheese has been quite firm, and during the week has advanced ½ to 1½c. per lb. at various board meetings. There has not been a corresponding increase in the British market, though that is up 1s. The local trade is steady and prices are from 8½ to 9c. There has been a better feeling in eggs during the period since our last review, due to the marked improvement in quality. A better demand and price exists in the export market, and as a result considerable shipments are going forward. Quotations for strictly new-laid eggs are from 11 to 12c., No. 2 stock being worth from 8 to 9c.

DRUGS.—Quinine has seen an advance during the week, and indications seem to point to a still greater increase in value. Glycerine is likewise stronger, present quotations being from 19½ to 21c. It is held amongst the trade that a number of staple articles are likely to advance in price, and also some of the heavy chemicals. Meanwhile, we have not made many changes in quotations.

DRY GOODS.—What we said about better business in this line last week holds good in the main for the present time. Orders for dress goods still continue to come in satisfactorily. Some of the standard sellers being goods with wool and tinsel effects, and also nigger-head effects.

FLOUR AND MEAL.—The flour market is more active, especially for low grade, and prices are firm, with a strong upward tendency. Manitoba is steady; straight roller in cars quotes at $3.65 to 3.70, west. Nothing to speak of is doing in meal.

FRESH FISH.—Local dealers complain that they are compelled to send to Buffalo for Canadian fish. The reason for this being that Buffalo and other American companies buy up the Canadian catch, which necessitates our dealers paying duty whenever their needs cannot be supplied on this side of the line. White fish and trout are quoted at 7c.; halibut, 15c.; British Columbia salmon, 15c.; Restigouche salmon, 20c.; Mascalonge, 7c.; bass, 9c.; haddock, 8c.; cod fish, 9c., and market cod fish, 6c.

FRESH FRUITS.—Melons are unchanged in quotations. Lemons, November cut, are now selling at an advance. Half boxes of Sorrento oranges are worth $2.25 and $2.50; 300's being $4 per box. Bananas run in price from $1.40 to 1 75 per bunch. Egyptian onions are quoted at 2½c. per lb.

GRAIN.—Wheat has gone up several cents per bushel, and is strong at the advance. A brisk trade is doing in both export and milling old wheat. The American quotation for September is now 83½c. having touched 84c. this morning, advancing thus from 80⅛c. on Tuesday, and 78½c. on Monday. The total advance within thirty days has been not less than 16 or 18c. per bushel.

The stocks in store at Port Arthur on July 31st were 876,064 bushels, and there were received 241,405 bushels, and shipped 251,628 bushels, leaving in store on Aug. 7th, 865,841 bushels.

GROCERIES.—Business has been fairly brisk during the week. The sugar market is not as much "rushed" as it was during berry-preserving time. Syrups and molasses are quiet and steady without any change in quotations. Canned meats have advanced because of the greater values in fresh beef. California evpporated peaches are finding a good sale in 25-lb. boxes.

HIDES AND SKINS.—A fair demand exists for hides. As yet, there is not much accumulation of stock, although offerings are more plentiful, and prices will likely be easier. Despatches from Chicago seem to indicate a steady market there with little change in prices. During the week no large transactions have been reported, still receipts are expected to increase steadily from this time forward. The reports from Boston are, that the "hide market is stronger."

LEATHER.—The market is firm, and a steady trade is being done at generally unchanged prices.

PAINTS AND OILS.—Business in this line is quiet. One would almost expect that those who did not have their residences painted last spring would have them done now while the families are away holidaying, but trade, as stated above, is quiet, which indicates that nothing more than a regular business is doing. Prices are firm. It is said that linseed oil will see an advance before long. Turpentine has dropped again in price in the South, and prices here are therefore unsteady. Enquiries are coming in steadily for plate glass and window glass, and a fair trade is moving in both. Our Prices Current show changes in this department.

HARDWARE AND METALS.—Trade in general is about the same in volume as last week, and there is no special feature to comment upon. Prices throughout remain firm, and orders received cover a considerable assortment of hardware and tinware. The demand for plumbers' supplies is improving and trade in metals is fairly active, the demand being principally for galvanized iron, tin plate and iron pipe which have again advanced slightly in price. Orders for sporting goods are said to be increasing. Import orders for Canada plate are still being booked, at the same time quite a number of shipments of these are reaching their destination throughout the country this week. So great was the demand for snaths and cradles that it exhausted the supply, and manufacturers state that stocks are completely sold out. The discount on wire has been changed, and is now 33 per cent., instead of 35.

PROVISIONS.—Prices in hog products continue firm as a rule, and dealers report some lines as sold out. Owing to an active demand, with firm prices for hogs, they are not likely to be replaced until the supply of swine is increased, which will not likely be for a month or two yet. We have heard of lots of dry salted long and short clears being imported from the United States. There has also been an increase in the price of several lines which our Prices Current list will show.

WOOL.—Dealers report a moderate demand from the millers for imported, with prices of domestic still uncertain.

MONTREAL MARKETS.

MONTREAL, 11th Aug., 1897.

ASHES.—Receipts have been a little freer of late, but there is really little more business doing, and quotations continue to show a depressed market. We quote $3 to 3.10 per cental for first pots; $2.80 to 2 85 for seconds, and about $4.30 for pearls.

BOOTS AND SHOES.—There is but little activity among the shoe factories at the moment, either as buyers of leather or as sellers of stock. More activity may be expected a little later.

CEMENTS AND FIREBRICKS.—Receipts of cements for week ending to-day are 1,300 brls. of English; no Belgian. The present demand is a limited one, but values hold steady at $2.05 to 2.10 for English and $1.90 to 1.95 for Belgian. Receipts of firebricks 35,000, with prices steady at $15 to 21.00 per thousand.

DAIRY PRODUCTS.—Notwithstanding the heavy product and export, there has been some advance in price since last writing, which still holds, and finest Western is quoted 8⅝ to 8¾c., Townships 8¼ to 8½c., and Quebec 8 to 8¼c. The cable quotation also underwent a change this morning, the figure being now 41s. The exports last week were 57,940 boxes, and the total to date 885,360 boxes, as against 681,612 boxes at date last year. For choice creamery butter 17 to 17¼c. is quoted. For eggs there is good enquiry at 11c.

MONTREAL STOCKS IN STORE.

Oatmeal............	71	191
Flour	19,461	18,405
Buckwheat..........	4,481	4,137

GROCERIES.—Nothing very special is to be noted in this line. Trading in teas on spot is rather quiet at the moment, though one agent reports a sale of about 500 packages of sun-dried Japans at from 15 to 17c. The market in Japan is strengthening, and a cable received to-day reports an advance in good common grades. Some new China teas are now coming forward, and are showing good values. The activity in sugars is fairly maintained, refiners reporting an active Western demand. The second grade of granulated put on the market to meet the competition from foreign refined has been put up a shade, owing to advance in Europe, moderate lots are now sold from refinery at 3¾c., and round lots 3 11-16c. The figure for standard granulated remains at 4c., and for yellows 3¼ to 3⅝c. Sales of about 25,000 cases of tomatoes, corn and peas are reported by Western packers, whom we noticed last week as being here in force. A sale of a car lot of last year's pack of tomatoes is reported at 75c., and a car of corn at 50c.

HIDES.—The usual weekly meeting of the Montreal association was not held Monday, so that there is no change to report thus far. The figures dealers are paying are 8c. for No. 1 beef hides, No. 1 calf 8c., No. 2 ditto 6c. per lb.; lambskins and clips 35c. each. Beef hides are coming in a little more freely, with a demand from tanners which about absorbs the same.

LEATHER.—The local demand for leather is not materially improved. In England values are reported improving with light stocks, and some tanners report sales of splits and grain for export at improved figures. The local quotations for splits are as a consequence stiffer. We quote:— Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.;

THE NYLIC.

The New York Life Insurance Company has established an organization known as The Nylic, embodying an absolutely new and unique method of compensation, by which men of integrity, ability, and energy, with or without experience, can make life insurance their business, and secure a definite income continous throughout life.

Applications are invited by the undersigned for general and special agencies and management of territory from experienced Life Insurance men, as well as from those wishing to acquire training and experience.

R. HOPE ATKINSON, Agency Director, MONTREAL.

grained, 30 to 35c ; Scotch grained, 30 to 35c. ; western splits, 21 to 24c. ; Quebec do., 16 to 17c. ; juniors, 15 to 17c. ; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c. ; imitation French calf skins, 65 to 75c. ; colored calf, American, 25 to 28c. ; Canadian, 20 to 22c. ; colored pebble cow, 13 to 15c. ; russet sheepskin linings, 30 to 40c. ; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c. ; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c ; rough, 22 to 23c. ; russet and bridle, 35 to 45c.

Metals and Hardware.—No important transactions are reported for the week. Some little trading is reported in Summerlee pig iron at $17 50 to 18.00, according to lot ; there is some little Carnbroe here, which would be available at $16 ; Hamilton continues steady at $16 for No. 1. Domestic bar iron continues easy at $1 30 to 1.35. The dearth of Terne plates continues unrelieved, and the assortment of tinplates is reported a poor one. Canada plates are now coming forward in fair supply. Tin, lead, copper, antimony, etc., are without recent change. We quote : — Summerlee pig iron, $17 00 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16.25 ; Ayrsome, No. 1, $16.50 ; No 3, $16 ; Shotts, $17.25 to 17.50 ; Carnbroe, $16.00, ex-store ; Siemens pig No. 1, $00.00 ; Ferrona, No. 1, $00.00 ; Hamilton No. 1, $16.00 ; No. 2, ditto, $15.25; machinery scrap, $15.00 ; common do., $12.00 to 13.00 ; bar iron, Canadian, $1.30 to 1.35 ; British, $2.00 to 2.15 ; best refined, $2.40; Low Moor, $5 ; Canada plates—Pontypool, or equal, $2.15 ; 52 sheets to box ; 60 sheets, $2.25 ; 75 sheets, $2.35 ; all polished Canadas $2.40 ; Terne roofing plate, 20x28, $6 00 ; Black sheet iron, No. 28, $2.25 ; No. 26, $2.15 ; No. 24, $2.05 ; Nos. 17, $2 ; No. 16 and heavier, $2.15 ; tin plates —Bradley charcoal, $5.60 to 5.70 ; charcoal, I. C., Alloway, $3.15 to 3.25 ; do, I.X., $3.90 to 4.00 ; P. D.Crown, I C , $3 60 to 3.75 ; do., I.X., $4.50 ; Coke I.C., $2 90 to 3.00 ; coke, wasters, $2 70 ; galvanized sheets, No. 28, ordinary brands, $4 ; No. 26, $3.75 ; No. 24, $3 50 in case lots ; Morewood, $5.00 to 5.10 ; tinned sheets, coke, No. 24, 5½c. ; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75 ; English ditto, $2 ; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal ; ditto three-sixteenths inch, $2.50 ; tank iron, ¼ inch, $1 50 ; three-sixeenths do. ; $2.00 ; tank steel, $1.75 ; heads, seven-sixteenths and upwards, $2 45 to 2.50 ; Russian sheet iron, 9c. ; lead, per 100 lbs., pig, $3 35 to 3.50 ; sheet, $4 to 4.25 ; shot, $6 to 6.50 ; best cast-steel, 8 to 10c.; toe calk, $2.25 ; spring, $2.50 ; sleigh shoe, $1.85 ; tire, $1 90 ; round machinery steel $2.25 ; ingot tin, 16 to 16½c. for L. & F. ; Straits, 15¼ to 15½c. ; bar tin, 16½ to 17c ; ingot copper, 11½ to 12½c. ; sheet zinc, $5 to $5.25 ; Silesian spelter, $4.65 to 4.75 ; Veille Montagne spelter, $4.75 to 5.00 ; American spelter, $4.60 to 4.75 ; antimony, 8½ to 9c.

Oils, Paints and Glass.—The advance of last week in turpentine has been maintained, though the market South is reported a little easier. Linseed is reported much firmer in England, at £17, and it is claimed would cost present quotations to lay down. Castor oil is reported to be strengthening. Glass is steady at last week's advance, which has also been adopted by Toronto dealers. We quote :—Turpentine, one to four brls., 44c. ; five to nine brls., 43c., net 30 days. Linseed oil, raw, one to four brls., 41c.; five to nine brls , 40c.; boiled, one to four barrels, 44c. ; five to nine brls . 43c., net 30 days ; olive oil, machinery, 90c. ; Nfld. cod, 40 to 42c. per gal. ; Gaspe oil, 36 to 38c. per gal. ; steam refined seal, 46 to 48c. per gallon in small lots. Castor oil, 8½ to 9c. as to quantity. Leads (chemically pure and first-class brands only), $5.00, No. 1, $4.62½ ; No. 2, $4.25 ; No. 3, $3.87½ ; No. 4, $3.50 ; dry white lead, 4¼ to 4½c. ; genuine red do., 4 to 4¼c.; No. 1 red lead, 3¾ to 4c. ; putty, 1.65 to $1.70 in bulk, $1.75 to 1.80 in bladders, $2 to 2.10 in tins ; London washed whiting, 40 to 45c. ; Paris white, 85 to 90c. ; Venetian red, $1.50 to 1.75 ; yellow ochre, $1.25 to 1.50 ; spruce ochre, $1.75 to 2.00 ; Paris green, 12½ to 13c. in bulk ; packages, 14c.; window glass, $1.30 per 50 feet for first break ; $1.40 for second break ; third break, $2.90.

Wool.—The market has developed further strength, and holders of Cape wool are now asking 18c. for ordinary quality, which three months ago they quoted at 14c., and the stock of which is really very small. A cargo of moderate size is now being collected at the Cape, but it will be three months before it reaches here. Some fair lots of scoured wool are being brought in from France, which are quoted at 30 to 35c. There is no domestic fleece in this market, and quite a scarcity of pulled wools.

Queen City Chambers, Church St., Toronto.

DIRECTORS:
JAS. GOLDIE, Pres. J. L. SPINK, Vice-Pres.
THOS. WALMSLEY, Treas. HUGH SCOTT, Mgr. and Sec.
Adam Austin, Inspector.

This Company was organized in 1885, specially for the purpose of insuring manufacturing industries, warehouses and contents.

The primary object being to give protection against loss by fire at a minimum cost consistent with absolute security.

The system adopted has been to inspect all risks before acceptance and fix the rate to be exacted equitably in accordance with the hazard assumed.

Assurers with this company have made a saving, upwards of $108,000.00 on the current rates charged, in addition to which, on the rates exacted by us, dividends have been declared to policy-holders amounting to over $24,000.00, together, making the very substantial sum of over $132,000.00 that our policy-holders have saved during the eleven years we have been in operation.

As no canvassers are employed, dealing directly with the assured, those desiring to avail themselves of the advantages thus offered will please address

OUR LUMBER POLICY.

The following letter dealing with Ontario lumber trade and American tariff conditions is sent to the Toronto *World* by Mr. John Waldie, a well-known Ontario lumberman:

"The condition of the lumber industry in Ontario at the present moment is attracting public attention to a very great extent, owing to the fact that the Dingley bill not only provides for an import duty of $2 per thousand on rough or undressed lumber, but also carries with it a condition that if Canada should place an export duty on sawlogs, the amount of such export duty will be added to the import duty; in effect, threatening Canada, should she resume the position that formerly existed when the United States had a $2 import duty on lumber, and Canada had a $2 export duty on sawlogs, and ignoring the agreement made seven years ago, whereby (happily for both countries) the United States reduced their import duty to $1, and the Canadian Government withdrew the export duty.

The "kicking" or "we dare you" clause has since been embodied in the American legislation at the request of a few interested lumbermen in Michigan, who are drawing their supplies of pine logs from Canada.

The conditions that govern in the lumber industry to-day are quite different from what they formerly were, inasmuch as Canadian mills, as well as Michigan mills, have to go further for their supply of logs, and both are drawing from the same sources.

We have, therefore, to consider what is best for the people of Ontario, as, no doubt, the American legislation considered what was best for the people of Michigan, and in doing so we have to consider the geographical position of the different portions of Canada, as well as that of the United States, and it presents, in some respects, the same feature as the alien labor law presented. In some provinces of Canada they were not affected by it, while in others it was enforced in a very irritating manner. Therefore, our legislation at Ottawa permits the enforcement of our recent Act by Order-in-Council, in one province, when required, while not put in operation generally.

Let us consider the conditions of the lumber business as they exist to-day. There has been very great general depression throughout the United States and in Canada. In connection therewith there has been a greatly lessened demand for sawn lumber. Building operations have not been carried on to the usual extent for several years, while the manufacture of lumber has steadily increased, partly owing to the desire of the large operators who bought their standing timber at high prices to save interest by cutting it off promptly.

Everyone engaged in the lumber industry in Ontario can clearly see that if the millmen in Michigan are allowed to have free logs, towed to their mills with their own tugs, using free coal, to large centres, where the refuse of a mill can be sold at a profit, that, if added to the natural advantages they have, $2 per thousand in their own markets, with the right of sending the coarse and inferior product back into Canada free of charge, that it will utterly destroy the sawmill industry of the Georgian Bay, where the logs have to be towed from the same source as the American mills draw their supply, by tugs which are required to pay duty upon their coal and outfit.

Now, it is a question whether the Government at Ottawa should meet the difficulty by an export duty, or should it be met in some other way. I am quite in accord with the proposition outlined in the letter of Mr. Bertram; that as it is a local question, it should be dealt with by the Local Government, and, while an export duty would apply whether the timber was cut upon public or upon private lands, any action of the Local Government would only apply to the public lands.

Two local interests are affected at the present moment—the local Michigan interest and the local Ontario or Georgian Bay interest—in the manufacture of sawn lumber.

The Dingley bill is specially drawn to care for the Michigan sawmill interest. What is asked by Mr. Bertram and others is that the Ontario Government meet that condition by confining the cut of pine timber on the Crown lands, for a term, to such quantities as are required to keep the sawmills in Ontario in operation. That is, confine the manufacture of pine timber taken from Crown lands to Canadian mills. In this way no impediment or hindrance is placed upon the settler in the disposition of his wood of any kind, and a great benefit will be conferred upon the trade generally by a limiting of the cut to the need of our own mills, until the market resumes a normal condition.

From the geographical position of Ontario, transportation of wood products govern equal with the market values in different places. As an example, Ottawa can put lumber at the ship's side in Montreal for $1 per M. feet, B.M. From the Georgian Bay the rate is $3. Therefore, the Georgian Bay mill must seek a nearer market or lose the difference, and, as there is not $2, or anything like that margin, in the business to-day, it is not possible for them to manufacture extensively for the English market. A portion of the better quality will naturally find its way east, about one-tenth of the product, therefore it is useless to suppose that a Georgian Bay sawmill can compete with Ottawa for the English market.

The question is, Who are to suffer by the unfriendly legislation? There are not more than ten Michigan limit-holders, and half that number of Canadians, who tow the immense quantity of sawlogs to Michigan, while on the other hand the mills at Wiarton, Owen Sound, Collingwood, Penetanguishene, Midland, Victoria Harbor, Waubaushene, Fesserton, Coldwater, Parry Sound, etc. (where the owners are limit-holders), give employment to fully 2,000 men, representing at least a population of 6,000; and if the employees in the foundries and machine shops at Brantford, Peterborough, etc., where sawmill machinery is made, were included, at least 20,000 of our people would suffer.

The question is, Can the Ottawa or Ontario Government stand idly by and see such results? I do not believe it: and, as the easiest, simplest and most effective means can be used by the Ontario Government inserting a condition that all the timber cut on the Crown lands under license shall be manufactured in Canada, let it be done at once by order-in-Council, supplemented, if need be, by an Act of Parliament. Timber or deeded land would not be interfered with nor settlers disturbed in their employment, and no vested interest would suffer. The same regulation would apply to all alike, and the lessened cut of sawlogs and lumber would be a benefit to all concerned."

JOHN WALDIE,
President Victoria Harbor Lumber Co.
(Limited).
Toronto, 7th August, 1897.

BRITAIN'S CARRYING TRADE.

An English journal says that last year the United States carried only twelve per cent. of the total exports and imports of that country. So that, after a hundred years of national life, the United States are doing less than half the percentage of the shipping trade that was done by the thirteen British colonies prior to 1795. Meanwhile Great Britain, Germany, France and Italy have been steadily increasing their carrying trade. Of course England, France, Germany and Italy have been increasing their shipping, but the people have been paying for it in subsidies. This year the "Campania," "Lucania," "Majestic," and "Teutonic" well receive some $35,000 each. The Peninsular and Oriental Company will receive about half as much for each of four steamers, and the Canadian Pacific gets $100,000 for their three steamers. The armament kept in readiness for such ships in England, in India, and in Hong Kong or Esquimault, consists of breech-loaders in place of the previous muzzle-loaders. In the event of war breaking out each ship is to be supplied with twenty-six seamen gunners from the naval depots, in addition to a full compliment of men from the Royal Naval Reserve.

ANGLO-SAXON COURAGE.

"Don't be nervous; there'd be fifty jackies over the side after. the youngster before he'd have time to strike the water." So said a naval officer once in my hearing to the anxious mother of two little chaps who, visiting one of our men-of-war in the harbor, had gone for'ard among the crew in company with half a score of kindly, big-hearted blue jackets. And what he said—allowing for some sailor-like picturesqueness of language—was largely true, for when did one ever hear of man-o'-war's man—at least of those that speak English—failing to take any risk, short of absolute impossibilities, to save life, or to go to the rescue of those in peril and distress on the "mighty deep." I think it is in one of Clark Russell's stories that the hero, storm-tossed on a sinking wreck, breathes forth a prayer that the sail he has just sighted may fly English or American colors, confident of rescue at all hazards at sturdy Saxon hands. On the "Trenton," dragging, with colors flying, slowly to destruction on the wind-torn waters of Samoa Bay, generous hearts yet found means of rescuing comrades from the masts of the already submerged "Vandalia." Only the other day the telegraph flashed from far-off China curt news of the foundering of a steamship with its load of passengers, and the prompt response of the crews of our warships near by to the cry for help. Over and over again the heroic story has been told; and it will be told again and again as long as men "go down to the sea in ships."—*Harper's Weekly.*

SOME COOL SENSE.

The New York *Journal of Commerce*, in an editorial condemning the warlike writings which appear in some of the American papers, has the following reference to the Behring Sea difficulty:

Congress has not performed its duty to England in the sealing matter. The Paris tribunal, upon the creation of which we insisted, decided that we were liable for damages for the capture of British sealers. Our Executive agreed to pay $425,000 for that liability. Congress refused to pay that sum, and has taken no step to pay any other sum. This is not creditable to us, and it is in the very worst taste for us, in view of this failure to discharge our obligations, to accuse England of bad faith. But the fact is that the negotiations with England for the preservation of the seals is proceeding, and the relations between the officials of the two Governments are friendly enough, and no responsible official of either Government would dream of allowing the two countries to drift into war, or anything approaching war, over the seals.

—The following story is told of the late Sir John Bennett, the well-known English watchmaker: He was, with two friends, travelling up to London from an outlying place some fifteen or twenty miles distant, when a little dispute arose as to the exact distance of the journey. The two friends were emphatic in their contradictions of each other's statements, and eventually offered to back their own opinions. At this point Sir John came to the rescue. He would not hear of a money bet, but consented to allow them to settle matters by betting a ten-guinea (Bennett's) watch.

DECISIONS IN COMMERCIAL LAW.

RE GORDON V. PICKERING —A by-law to repeal a Local Option By-law was defeated by a majority of fifty-eight votes on application to the County Judge for scrutiny, under the Consolidated Municipal Act, 1892, sections 323 *et seq*. Held, by Dartnell, that farmer's sons are entitled to vote on a Local Option By-law, and the proper voters are those entitled to vote on municipal elections. That the judge on such a scrutiny has power to inquire into the qualifications of voters, and that a number in excess of the majority against the by-law having been disallowed, the voting on by-law was declared invalid.

BOSTON AND MAINE RAILWAY V. MCDUFFEY.—The Circuit Court of Appeals for the Second Circuit has lately held, that a right of action given by the statutes of Canada to the widow and children of one who has been killed in that country through the negligence of another, may be prosecuted by judgment by them in the courts of the United States, through the statute of the State within whose territory suit is brought (here Vermont), gives the right of action to the personal representatives of the deceased.

MINNEAPOLIS CO. V. REGIER.—Since the plaintiff in an action for malicious prosecution is entitled, if successful, to recover damages for the injury to his reputation, he may prove newspaper publications containing plain accounts of the prosecution, without comment thereon. "A plain, uncolored, statement of such proceedings in a newspaper is a privileged publication, and not in itself a tort. Such a publication is a natural and probable consequence, and a direct consequence of the institution of the prosecution; and the fact that the prosecution resulted in such a publication may properly be shown to aid the jury in estimating the damages" (Supreme Court of Nebraska).

BAIN V. I.O.F.—Action by Robert A. Bain, an engineer, residing in the township of Enniskillen, upon an endowment certificate issued by defendants, whereby they contracted to pay plaintiff $500 in the event of his becoming disabled. On the 13th March, 1893, plaintiff lost his left hand and a part of his left arm. Held, that his disability is not, having regard to his occupation and other circumstances, total and permanent. Action dismissed with costs.

WELSBACH INCANDESCENT GASLIGHT CO. V. STANNARD.—Motion by plaintiffs for security for costs of defendants' appeals to Court of Appeal from judgment of Boyd, C., in favor of plaintiff, upon the ground of the defendants' inability to pay plaintiffs' costs, in case the appeal should prove unsuccessful. Held by Divisional Court that there being no reason to suppose that the defendants are not intending to prosecute their appeal in good faith, and as they are conforming to the judgment obtained by the plaintiffs at an early stage, and as their ability to answer for costs has not been put to the test of an execution; and the proof of their alleged inability rests in a great measure upon statements founded upon information and belief. It is not a case for ordering security.

THE Toronto Electric Motor Company has sold to the Methodist Book and Publishing Company, of this city, a 600-incandescent light plant; direct connected dynamo, with Ideal engine manufactured by Goldie & McCulloch, Galt. This, we are told, is one of the largest isolated installations in the province.

Mining Engineer.

Robert R. Hedley, having a wide experience in mining and smelting in Canada, United States, Venezuela and Mexico, will undertake mining engineering work in British Columbia. Can give English and American references.

Address, Nelson, B.C.

Mercantile Summary.

Three by-laws will be voted on in Dundas on Monday, August 30th, one to raise $5,300 to rebuild the Ewart dam, one to build a fire hall with rooms and accommodation for three men, at a cost of $3,500, and one to reduce the number of councillors from 12 to 8.

At a meeting of the St. John School Board last week the tender of J. C. Mackintosh, Halifax, for $25,000 of 3½ per cent. bonds, running 25 years at 96.575 was accepted; also that of D. T. Johnston, Chatham, for $10,000 at 97.75, and of Mr. Carr for a $500 bond at 98.

A Glasgow letter makes a poor mouth over the presumed effect of the American tariff on the trade of Scotch cities. Dundee jute merchants will feel it, for one thing, as well as the southern towns that make cloths and plaids. The Glasgow trade in chemicals, thread, linen, cotton and woolen will be affected materially.

The steamer "Campana" took, on the return trip to Montreal from Summerside, P.E.I., 1,100 boxes, or about 79,500 pounds, of cheese, shipped to Mr. Dillon to parties in Montreal; also 300 boxes from Charlottetown. And the steamer "Fastnet" from Summerside took to Halifax 769 cases of lobsters, valued at $6,700, for the English market.

The city of St. Hyacinthe, Que., has closed a contract with a Sherbrooke concern for two pressure filters, with a capacity of 750,000 gallons each in twenty-four hours. The Jenckes Machine Company has completed the balance of the saw mill machinery for the Montague Paper Co., Lake Megantic, which intends to start its new mills at once.

We learned too late for last issue that Mr. Gibbons, of London, acting for C. Pearce, dry goods merchant, of Petrolea, has been negotiating with Messrs. Thibaudeau Brothers, the largest creditors, for an extension, but the extension without security was refused. The firm, however, offered to take 75 cents on the dollar for their claim, and now the other creditors are asked to accept a like figure.

The forty-sixth annual meeting of the American Association for the Advancement of Science opened in Detroit last Monday. The attendance of members was about 200 at the opening, and about twenty members of the British Association occupied seats on the platform. Many of the members who could not attend both sessions have come to the session of the British Association at Toronto, this week and next.

The Winnipeg Board of Trade has discussed the shipment of Manitoba products to the West Indies, and the proposal made by a Halifax man, that a competent man be sent to the Indies to report on the trade there, and what is necessary to increase the exports of Canadian products. The council appointed a committee to look into the matter and secure the necessary data befere deciding to make recommendations to the Minister of Trade and Commerce.

The whole (with the exception of fourteen pages) of the July number of *Money and Risks* is devoted to the description and illustration of the rise and progress of the Ontario Mutual Life Assurance Company. There are portraits of the manager, directors and officers of the company, also pictures of the offices in Waterloo and in Toronto, and of groups of agents. This lengthy history of one of our best known life offices forms an interesting chapter in the annals of Canadian life underwriting.

A week ago, the Canadian Government commissioner to Mexico and South America, Mr. E. E. Sheppard, handed his report concerning possible trade with Mexico to Sir Richard Cartwright. Mr. Sheppard says we can sell lumber, fish and some manufactures in Mexico if proper arrangements are made, but at present the duty on fish is exceedingly high. In return Mexico can send us sugar, tobacco, coffee and products of that nature. Mr. Sheppard has left Toronto for British Guiana, thence to Brazil, Montevideo and Argentina.

In Toronto one failure to write about occurred last week. J. W. McAdam & Co., started first to deal in shoes in 1885. In 1889 they assigned and the stock was sold. After that business was again started in the name of Mrs. McAdam, and in this manner it continued until 1893. Then Fegan & McDiarmid became owners and continued as such until last March, when J. W. McAdam, his wife and one Henry J. Cox bought back the stock. Now they have failed again with assets and liabilities about the same.

According to advices received from Japan, a hint that might be useful to Canadian manufactures is that in sending catalogues out to Japan the approximate prices of goods invariably be given. Without prices catalogues are so much waste paper. Government officials, in making up specifications, are bound to give some approximate prices in order to obtain a vote for the amount, and unless prices are specified, time is lost in communicating on the subject. Doubts are expressed as to the permanence of American competition in machinery, nails and pig iron.

E. E. Sheppard found Canadians in Mexico doing as well as Canadians always do when they go abroad. Among those he met were Col. Geo. N. Green, of St. John, N.B., the man who stopped Maximilian. Dr. Green holds a High office in the Mexican army. W. H. Dill, who went there from St. Catharines, occupies an important position as a railroad manager. A young man named Bailey, from Toronto, is managing a large electrical business in the city of Mexico, and "Jim" J. McLeod, of Woodstock is keeping a store in that city. Dr. Fraser, who married a daughter of Hon. David Mills, has a large practice; also Dr. Burrell, formerly, of London. Mr. McLeod, who is a brother-in-law of Mr. Alex. McLaren, M.P., wrote Mr. Sheppard a letter on the subject of trade between the two countries.

Word comes from Ottawa that an order-in-council has been passed, giving the Burley Gold Mining Company, of Ottawa, the right to build a crib in Lake of the Woods, opposite the Sultana mine, for the purpose of sinking a shaft. This company, composed chiefly of Ottawa men, holds a mining location under the surface of Lake of the Woods, which is believed to include the prolongation of the Sultana lode beneath the lake. If true, the property is very valuable, for the Sultana is worth $1,500,000. The Burley Company last winter made several borings with the diamond drill, utilizing the thick lake ice as a working surface, and they are believed to have found the Sultana lode. The question then arose as how to get at the lode. The company own a small island close by, but not available for working the lode except at great expense. They accordingly applied to the Dominion for a permit to put a crib in the lake at a point where the depth is 20 feet. By law, no "obstruction" is allowed in navigable waters without special permission. This permission has now been granted, and the company will get to work to put down the crib-work, beneath which to sink a shaft to the ore vein, over a hundred feet beneath the bottom of the lake.

THE GURNEY FOUNDRY CO., Limited.,
TORONTO.

The Gurney-Massey Co., Limited, Montreal

Mercantile Summary.

THE ratepayers of Hamilton have been defeated by a vote of 221 to 1,663 the by-law to raise $110,000 for putting down permanent pavements, which included a sum necessary to buy a road roller.

LAST March, Joseph Darveau began in Quebec city as a dealer in teas and crockery with very limited capital, but has found that it requires experience as well as money to carry on business in these days of keen competition. He owes about $1,000 and having only $700 to pay it with has been forced to assign.

WE regret to have to announce the suspension of Edgar Judge, an old and well-known corn and flour merchant in Montreal, owing to heavy losses. Mr. Judge is making up a statement of affairs, but his liabilities are not believed to be much more than $10,000. He has the sympathy of the trade in his misfortunes.

GRAIN experts who have been inspecting the Manitoba wheat fields, estimated on Saturday last, that the general average yield will be eighteen bushels to the acre. Taking this estimate as reasonably accurate, the total yield of the Province will be 35,244,450 bushels, the estimated area under crop being 1,958,025 acres.

MESSRS. SECORD & PERLEY, Brantford, Ont. have dissolved partnership. For a number of years they have carried on an extensive business as agents for carriages, wagons, implements, etc., and were also proprietors of a granite and marble works in the same city., Mr. Perley will in future continue the whole business himself.

A FARMER and trader at St. Constant, Que., named Edmond Lefebvre, has assigned to the court, owing some $24,000, scattered amongst a great many creditors, the principal of whom are farmers in the surrounding country.——A small tailor of Drummondville, Que , W. Barnabe by name, has made a private assignment, owing less than $1,000.

J. A. RACETTE, dealer in shoes, formerly of Drummondville, Que., but located in Lake Megantic, Que., since last spring has been obliged to succumb to adverse circumstances and has assigned. He shows a deficiency of some $700 on $3,000 of debts. Was originally a custom shoemaker, but becoming ambitious he put in a stock of shoes.

WE hear of an assignment by J. B. Stapleton, the sole proprietor of the firm of J. B. Stapleton & Co., general dealers at Port Hawkesbury, N.S. He gives preference to the estate of his father, whom he succeeded eleven years ago, for the amount of indebtedness due, which estate claims is $8,000, but J. B. says it is only $6,000. The assignee is at present making up an inventory.

AN advice from Gaspe, Que., states that further reports from oil well No. 27, in the township of Galt, give the yield from pumping one day and night at one hundred and fifty barrels. Several Americans are said to have been on the spot, and have gone away well satisfied that they have a good well this time in Gaspe, the reports and opinions of Canadian geologists to the contrary notwithstanding.

WORD comes that the Kootenay and Columbia mine, at Rossland, bids fair to rival the Le Roi as a large shipper of the best class of ore. There are, undoubtedly, says the *Mining Record*, other mines, as development goes on, that will be found equal, or perhaps better than Le Roi. We have heard experienced men express the opinion that the day is not far distant when there will be a dozen mines as good as Le Roi around Rossland.

WE note the following recent failures in the Lower Provinces: J. F. Richardson, many years in business as a lumber merchant of Lower Brighton, N.B., is offering 10 cents on the dollar, owing about $10,000.——Mrs. M. L. Curry, dealer in dry goods at Wolfville, N.S., has assigned, with liabilities of about $2,000 and only small assets. She started last fall, without experience.——A grocer of Weymouth, N.S., named T. F. Burke, in business some years, has assigned.

ANOTHER young Canadian has made his mark in the States. Word came to Toronto on Saturday that Mr. Grant McMicken, eldest son of Mr. Hamilton G. McMicken of this city, has been promoted to the position of ticket agent at Seattle of the Great Northern Railway. The appointment is an important one to be conferred on so young a man; Mr. McMicken must have impressed his superior officers with his ability, just as he has impressed others with his good manners and good sense.

A FINE raft of white pine timber passed Montreal Island down "the Back River," on Monday. It was taken out by R. H. Klock & Co. in the Kippewa and Quinze districts. There will be somewhere between 3,600 and 4,000 pieces in the raft, and the average is said to be very good. The timber is made up of square and waney pine and some little red Norway. The whole is larger and better in quality, says the *Gazette*, than one usually sees in these days, and brings back memories of the good old days when people talked of white pine of 75 and 80 feet average as simply being good timber.

Mercantile Summary.

Mr. J. R. HARRIS has commenced building an addition to his woolen mill at Rockwood.

J. A. PLAMONDON & Co., a small Quebec crockery firm who started last March, have assigned with liabilities of $1,800.

THE German residents of Berlin, Ontario, have erected in the beautiful Victoria Park of that town, a bronze statue of the German Emperor.

PROJECTORS of a condensed milk factory, in Sherbrooke, ask the council of that city for a bonus of $5,000 and exemption from taxation for ten years.

N. P. FINCH, who has a departmental store at Aylmer, Ont., has assigned to Claude B. Armstrong, of London. Assets about $40,000; liabilities, $28,000.

BRITISH COLUMBIA advices say that independently altogether of the Klondike traffic, the up-the-coast trade of our Pacific shore has increased wonderfully during the last few months.

THE steamer "Lytton" returned last week from a successful trip up the Columbia River as far as La Porta, 45 miles. She is the first steamer that has plied north of Revelstoke since 1868.

AT the annual meeting of the Ottawa Car Company directors were elected as under: T. Ahearn, president; J. W. McRae, Wm. Scott, P. Whelen and W. W. Wylie, vice-president and superintendent.

A BUFFALO despatch says that the Connersville Elevator Company has taken a contract for building the C.P.R. elevator at Fort William, which is to hold 1,500,000 bushels, with a capacity for doubling, and is to be done in February.

At VICTORIA, on Sunday last, there were close upon 1,000 men of every class, and from every part of the world who were wildly anxious to get started on the long trip to the new Eldorado. These men had tickets which carry them to Skagway Bay on the big collier "Bristol," or on the steamer "Islander," both of which sailed to-day.

GENTLEMEN representing various cash and mutual fire insurance companies of the province met in the Economical Insurance building at Berlin last week to discuss insurance questions Among those present: D. C. Macdonald, L. Leitch, A. McInnes, of London; C. M. Taylor, of Waterloo; J. A. Ross, Guelph; C. Packert, Stratford; R. S. Strong, Galt; H. Krantz.

THE Victoria *Times* of the 9th instant, thinks that the pack of salmon on the Fraser River this season will be a record-breaker. It is not a wild guess to predict a pack of one million cases if the phenomenal run of the past two weeks continues for a few weeks longer. Thus early in the season, some of the canneries have already secured two-thirds of their contemplated pack.

THE Montreal firm of Laramee & Massicotte, who carried on a departmental store on St. Catherine street east, and whose difficulties were alluded to recently, had a meeting of their creditors the other day, and being unable to effect a settlement have assigned to the court, owing some $44,000.——C. Berger & Co., grocers in Montreal, have assigned, owing the trade about $2,000, but it is expected a very good dividend, if not 100 cents in the dollar will be paid by the estate, as there is a likelihood that the father, who holds quite a claim, will not rank as a creditor.

A NEW BOOK FOR CREDIT MEN

"CREDITS, COLLECTIONS, AND THEIR MANAGEMENT" By W. H. PRESTON, (President of National Association of Credit Men.)

A Practical Treatise by an experienced and successful Credit Man, of inestimable value to all Credit Departments, large or small. Among others are important chapters on: Necessary Qualifications and Characteristics of a Credit Man; The Value of Signed Statements and the Need of Co-operation; The Proper Use of Statements with Court Decisions; Determining Lines of Credit; Management of Collections by the House Direct; Treatment of Slow, Doubtful, or Desperate Accounts; What Credit Men May Do to Make Losses Less. Each subject is systematically divided and considered at length. The work contains many valuable forms and blanks. Sent post-paid on receipt of $1.50. Published by

The Lawyer and Credit Man, 178 Fulton St. New York.

Mercantile Summary.

YESTERDAY Mr. Justice McMahon granted an order for the winding-up of the Canadian office of the Massachusetts Mutual Benefit Association, at the suit of Miss Matilda Mason, of Hamilton. Mr. Thos. E. P. Sutton, former agent of the Association here, is appointed temporary liquidator and receiver to receive the Canadian assets.

A LARGE and enthusiastic meeting of lumbermen was held in the Board of Trade Building in Toronto yesterday, and after a lengthy and spirited debate there was carried, by a large majority, a resolution in favor of restricting the exportation of sawlogs, and requesting the Ontario Government to amend its pine timber regulations so as to compel all pine timber cut under license to be sawn in Canada.

THE Huntingdon *Gleaner* lamenting the rainy weather of last week says: "During the fine days a great breadth of hay with some grain was secured, but what remains out is in a bad plight. Grain is so badly beaten down and the fields so soft that it has generally to be cut with the scythe, and is reported as poorly filled. A dry fortnight would be an unspeakable boon.

THE adjourned annual meeting of the Pelee Island Wine and Vineyards Co., Limited, was held in Brantford, Ont., on 9th instant. Messrs. J. S. Hamilton, W. J. Aikens and C. J. Parker were re-elected directors, and afterwards Capt. J. S. Hamilton was re-elected president, and Mr. W. J. Aikens re-appointed secretary-treasurer. A dividend of six per cent. was declared for the year ending August 1st, 1897.

AT a meeting of creditors of Robert Linton & Co., wholesale dry goods merchants of Montreal, an offer of 40 cents in the dollar was made, payable quarterly, spread over a year the last payment secured, or 35 cents in the dollar cash, and the general feeling of creditors is favorable to a settlement on either of the above bases. The firm showed liabilities of some $160,000 and a deficiency of about $25,000.

RELYING on contradictory sections in the Dingley bill, one imposing a quarter cent per pound duty on fresh fish, the other admitting them free, the Buffalo Fish Co. and the Davis Fish Co. have served notice on the United States customs officials protesting against the collection of duty of one quarter cent. per pound on fresh fish shipped to them from Canada. These firms import about 75,000 pounds of fish per day.

A QUEBEC special of Monday, to the Montreal *Gazette*, says that Mr. John Robinson, boot and shoe jobber, has just closed one of the largest deals in his line ever transacted in Quebec. He has purchased the whole of the present stock of the Besse factory, amounting to over 50,000 pairs of all kinds of boots and shoes. The price paid for this lot will reach in the vicinity of $50,000. It will require a train of seven cars to ship it to Montreal.

LUMBER items in the Campbellford *Herald* of last week, say that Gilmour & Co.'s sawmill, at Crow Bay, is hard at work, and expects to cut 500,000 feet of hemlock and cedar, to supply the local demand. Last winter at the new limits in Hunter, Peake and McLaughlin townships, Gilmour & Co. cut 51,000,000 feet, their large mill which was erected there last spring having been kept in constant motion day and night. Their sales during 1896 amounted to 40,000,000 feet, the greater part of which was sold to Newcastle-on-Tyne, in England.

WM. MOWAT, who represented a large Glasgow firm in Canada for nearly a dozen years, in the spring of 1895 bought the dry goods stock of Hinch & Co., Napanee, amounting to nearly $32,000, for $17,000. Although an energetic man Mr. Mowat found that expenses were necessarily heavy and that he could not make satisfactory progress. Under these circumstances he has asked his creditors for advice and assistance, and a statement is being prepared for their consideration.——The bailiff is in possession of the piano manufacturing firm of H. & T. Hoerr in this city, on a claim of $2,380, besides this, the firm have some trade liabilities and owe their landlord for rent.

THE map of the Klondyke region issued by *The Province* Publishing Company, Victoria and Vancouver, is a credit to the publisher. It is about 30 x 40 inches, on a bold scale, clearly marked, and depicts the territory from Sitka Sound and the mouth of the Stikine River, northward to Circle City, and from the Pelly Lakes westward to the Alaska boundary and beyond. The Indian trails, explorers' and surveyors' routes are distinctly given, and there is accompanying descriptive matter as to routes and placer mining regulations. A paper copy can be had for 50c., but it is worth while to get one mounted on cloth and in a neat case for twice the sum.

CHARLES W. JONES has been in the dry goods business under different styles, at Port Perry, for a good many years. At one time he was a partner in the firm of Hillyard & Co., whom he succeeded in Sept., 1889. In the following February, he compromised liabilities of $22,000 at 60 per cent., secured by his brother W. M. Jones. Afterward, the latter became a partner. The firm have always carried a large stock, but have been inclined to extend credits too freely. Difficulty in making collections has added to their trouble, and now they are compelled to ask creditors to write 25 per cent. off their claims of about $40,000.——Another offer of compromise at 75 per cent. is made by Chas. Pearce, dry goods dealer, Petrolia. In this instance assets of $3,000, and liabilities of $2,000 are claimed. It may be remembered that in Jan., 1894, he arranged a compromise of 62½ per cent.

A WELCOME change of form has been made in the Rand, McNally *Bankers' Monthly*, which is now in its fourteenth year. In place of a quarto of 36 pages, it is now of ordinary magazine size and of 80 pages. But this is by no means the only or the most important change: the paper is better, the type is clearer, and there are admirable illustrations. In short, it is now in appearance, as well as in contents, the sort of journal we should expect from a Chicago house, especially when that house is Rand, McNally & Co. The first article is upon the advisability of bank consolidations, and is by the Controller of the United States Currency; there is a part of Secretary Gage's address at Boston, and an interesting *resume* of French opinion on American finances. The portraits given in this issue are of Hon. Lyman J. Gage, Mr. Eckels, the controller, and Mr. Vanderlip, the assistant-secretary of the Treasury.

A WINDSOR, ONT., hotelkeeper, named John Allison, has gone behind in his payments, and the bailiff is said to be in possession of his premises for taxes amounting to nearly $300. Besides, his chattels are mortgaged, and he owes about $1,000.——A bailiff is also in possession of the Royal Hotel, Hamilton, carried on by Thomas Hood, for arrears of rent amounting to $3,800. It is complained that the business has been slack for a considerable time. — In 1896, Frank Shortts purchased the bankrupt stock of S. A. Hyman, at Belleville, for about $1,200. Of this sum his father advanced $750. Now we hear of his assignment with $2,500 liabilities. The estate will be a very poor one. — In January last, W. R. Hipwell removed from Bond Head to Camborne, where he succeeded John Williams as a general storekeeper. Having to borrow money to purchase the stock, it will be no surprise to hear that he has assigned.

STOCK TRANSACTIONS, TORONTO.

Business on the Toronto Stock Exchange during the week has been less active than for some time past. Quotations show little change compared with those of last week. C.P.R. stock declined somewhat at the beginning of the week, but is now firmer in sympathy with the advance in London. Loan companies have been more active and some have shown considerable advance. London and Can. Loan sold to-day (Thursday) at 83, an advance of 11 points since our last report. Can. Permanent has advanced 4 points and is now quoted at 113. Bank stocks are also firm.

Following are the transactions for the past week: Ontario, 3 at 83⅛; Commerce, 4 at 129½-130; Standard, 4 at 170; British America Ass., 20 at 124½: Western Ass., 581 at 166¼-166¾; Consumers' Gas, 8 at 209; Canada N.W. Land, common stock, 61 at 8-10, pref., 1,002 at 48 49; C.P.R. stock, 1,175 at 70-71½; Toronto Electric Light, 65 at 136-136¼; General Electric, 32 at 90-90¼; 13 General Electric pref., 108½; Commercial Cable, 437 at 177-178½; Commercial Cable, reg. bonds, at 106¾-106⅞; Toronto Railway, 75 at 80; Ont. and Qu'Appelle, 28 at 39½; Can. Landed and Nat., 100 at 101¾-102; Can. Permanent Loan, 133 at 110-113; Freehold Loan, 60 at 96-102, 33 (20%) at 72½; Imperial Load and Inv., 6 at 95; London and Can. CANAL ENLARGEMENT.

THE enlargement and deepening of the Canadian canals is being proceeded with, as the following particulars show: "The Lachine Canal is being deepened, the new Soulanges canal, which is to replace the old Beauharnois is well under way, and the Cornwall, which has never given satisfaction to the carriers, is being attended to. Perhaps the most important work now going on is the rebuilding of the present Galops canal, which extends between Iroquois and Cardinal, a distance of seven miles. The rebuilding, it may be stated, consists chiefly in widening, straightening and deepening the water course. This little stretch of water has been notoriously insufficient for the accommodation of the carrying trade of the country, and its enlargement has long been recognized by the Governments of the day. Its shallowness, but more especially its tortuosity, has always been the bane of the fresh-water skipper. The steadily increasing traffic on the great St. Lawrence necessitates the deepening and enlargement of the canals. The Galops is now in the hands of the Government. It is intended that when completed it shall have a depth of 14 feet throughout, instead of 9, as at present. The depth may possibly be increased. At Iroquois, where the only lock exists, which lock is 200 feet by 25, it is intended to construct one of 800 feet by 50, capable of allowing the largest lake vessels, or even small-sized ocean-craft, to pass through. The length of the lock will be 1,100 feet over all, with a lift of 17 feet. There will also be a guard lock at the western entrance, 275 by 25 feet. The walls of the lock will be constructed of solid masonry of the most improved fashion. The reports that our great waterway to the sea is being gradually improved are therefore good basis in fact.

BRITISH ASSOCIATION "SWELLS."

Some account of a few more of the leading lights among the great assemblage of scientists now gathered in Toronto, will doubtless be grateful to many of our readers.

Sir Charles W. Fremantle, K.C.B., was lately deputy master of the mint, and was assistant to various Parliamentary secretaries of the Treasury. Sir Charles was a member of the Royal Commission on Gold and Silver which reported on bi-metallism.

Prof. W. C. Roberts-Austen is chemist and assayer to the Royal Mint.

Mr. G. F. Deacon is the great mechanical engineer who constructed the Liverpool waterworks systems in the face of unforeseen difficulties which were regarded as insurmountable.

Prof. J. A. Ewing is professor of mechanism and applied mechanics in the University of Cambridge.

Prof. Le Neve Foster is H.M. inspector of mines, and professor of mining in the Royal School of Mines, London.

Prof. Gaskell and Prof. Haddon are both of Cambridge University, while Prof. Hurdman is professor of natural history in University College Liverpool.

Among the corresponding members are Prof. F. Braun, of Strasbourg, and Prof. B. Brauner, of the University of Prague, both bright and agreeable Germans.

Prof. R. Meldola is professor of chemistry in Finsbury Technical College, London, while Prof. L. C. Miall is professor of biology in Yorkshire College.

Mr. J. Milne is the great authority on earthquakes. He will exhibit at some of the sectional meetings some interesting instruments for the registration and detection of earthquake shocks.

Prof. W. C. Unwin, professor of civil and mechanical engineering in Central Technical College, City and Guilds of London Institute, and secretary of the International Commission on the Utilization of Niagara.

There is a professor from the University of New South Wales in the person of Professor Stuart.

Mr. A. L. Rotch is director of the Metorological Observatory of Massachusetts, and Mr. Hugh Ramage is of the Royal College of Science in Dublin, Ireland.

—I suppose, said the girl who affects literature, "that you are fond of something new now and then in the Scotch line," "Of co'se," replied Col. Stillwell; "but isn't the time fuh that sort of thing past?" "You mean it has had its day, like so many other fads?" "No, don't mistake me, I would not think of any such disrespect. Thah is nothing mo' delightful during the winteh months than an occasional hot Scotch. But at the present season I must say I do incline to'ds a mint julep."

Debentures.

THE SITUATION.

There is no abatement in the rush for the Klondike mines, and the danger that many of the pilgrims will fail to cross the Chilcot Pass before winter blocks the way, increases. The inexperienced in bearing such hardships as must be endured on the road, show most contempt for dangers they do not know. Old miners, who are in a position to survey the whole field of difficulties, are much more cautious than the "tenderfoot's," as the greenhorns are called. One old California miner has deliberately turned back before he reached the mountains. All that can be done is to give warning of the danger of starting to Klondike at this late period of the season; and if it is not heeded—as in many cases it has not been—it is to be feared that serious suffering will overtake the adventurers. Some old California miners have set out for Klondike which they will try to reach through a Canadian route, leaving the railway at Edmonton, and making for the nearest upper waters of the Mackenzie river. They know they cannot get to their destination this season, and understood that they must winter on the way. This will probably be the future route to the Klondike, but it is not yet in a condition for general use.

A report comes from Washington that the Canadian Government has submitted to that of the United States a proposal to establish a telegraph line from the head water of the winter navigation, in Alaska, into the Klondike district. For the purpose of making the proposal the agency and consent of the British Colonial Secretary of State was had recourse to. The proposed route is from the head water of the Lynn canal and over the mountains by the White Pass, or some pass, taking in Fort Selkirk on the way, to Klondike. Of course this transaction, if carried out, is not to have any effect on the question of international boundary, which remains to be settled. If the answer of the Washington authorities be favorable, our Government also proposes to erect places of shelter at distances of forty or fifty miles, and to maintain dog trains during winter for the conveyance of mails. In various ways, the Klondike gold fields will entail considerable expense on the Canadian Government, and this is good ground for desiring to get some return, in the form of license fees or royalty, or both, from the yield of the diggings. At the same time it would not justify the policy of making excessive demands under either of these heads.

Legal acumen, it is said, will find a way of testing in the Supreme Court of the United States, the constitutionality of the ten per cent. discriminating duty directed against the Canadian carrying interests. One ground of attack is found in the article of tea, which is subject to no duty, and the law does not say that ten per cent. shall be put on every article now free, but only that ten per cent. shall be added to the duty that is payable, when the conditions of retaliation are absent. The rule that would apply to tea would be good for all articles that are free; but it would not answer in the case of dutiable goods. Some other ground of attack may be found, which or may not be feasible. Congress has not been very successful in its devices for retaliation against Canada. In providing against the contingency of an export duty on logs, it was simply closing one door while there were left open several others of which it had not dreamed. The great Canadian railways will be the real, or at least, co-plaintiffs, though names used may be those of importers who complain of the surcharge. Meanwhile, the duties demanded may have to be paid. Whatever the result of the legal contest, it must be borne in mind that Congress has not exhausted all its powers, and there will be danger that aggression will, at last, find some other method which will be proof against judicial attack.

Far from reassuring is the present aspect of affairs in India. In the late uprising of natives, Afghanistan tribes and one conspicuous official took part. The Ameer has not only disavowed this illicit participation, but threatened to punish the guilty. Disavowal was a matter of course, but it does not remove all suspicion of treachery. Afghanistan is a convenient barrier between British India and the Russian possessions; it is a most difficult country to penetrate, as Great Britain knows to her cost, one of her occupations of Cabul having caused her the loss of an entire army. The Ameer, nevertheless, does not want any more visitations of this kind, nor does he want to lose to Great Britain another slice of territory; he would not willingly sacrifice even his British pension. Why did he withdraw his agents from British India? Why has he tried to inflame the passions of the zealots who are most easily moved by appeals to a religious war? The Turk is here one in feeling with him, and the Turk is not without moral influence with the Mahomedans of India. And behind both, intrenched in Turkestan, is the Czar, with his face towards India and his shadow over Afghanistan. The coterminous frontier between Russia and Afghanistan has recently been settled, largely on a line suggested by Great Britain, and it will remain just so long as it suits Russia to respect it, and not a day longer.

The state of Secretary Sherman's mental health is responsible for many indiscretions into which he has fallen in interviews accorded to newspaper reporters at Washington. To the general public the fact is notorious, though it may not be recognized in diplomatic circles. In these interviews he appears like a man running amuck, now coming into disagreeable contact with Great Britain, now with Spain, anon with Japan. These interviews may well have been forgotten by Mr. Sherman, and it is not at all impossible that in denying that they ever took place, he was acting in good faith. Diplomatically the denial is accepted, as a matter of course. This way out of the difficulty is easy, but so long as Mr. Sherman remains in office it is impossible not to feel that a relapse may at any moment occur. A repetition of the offence ought not to be among the possible casualities of the future. Foreign governments have no official notice of the fact that the American Secretary of State is unhappily suffering from senile decay. Such an incident may happen to disturb any government once, but it behoves those in supreme authority to see that it is not repeated. The question of Mr. Sherman's withdrawal or his removal from office is one which would, if almost any other government were concerned, be settled at once. Mr. Sherman may or may not be conscious of his condition; he acts as if he were not. His voluntary resignation, at present, seems to be out of the question; and for party reasons connected with the Ohio Senatorial election, the President is reported to decide against immediate removal. If any more glaring acts of indiscretion be committed by the United States Secretary of State, foreign nations will not be able to assign the true cause, since the truth has not been diplomatically communicated to them. There would remain nothing but the old resourse of denying that the interview ever took place, a device which, considering the ground it has already covered, is somewhat stale and will be wearisome to listen to in future.

As the disproportion between the amount of silver on the market and the amount needed augments, from the production outrunning the demand, the decrease in the price of the metal goes on, and following a well known law is greater than the increment of the excess. This is small encouragement to reopen Indian mints to the coinage of silver, and it begins to look as if the recent announcement that the British Government favored the reopening is not going to be realized. In a few years, it is probable from present conditions, that gold will be produced at a rate so accelerated as to reduce its price considerably, in comparison with other commodities. The director of the United States mint estimates the gold production of the world this year at 80 per cent. more than in any previous year. In the near future this rate of increase is likely to be hastened, and if this happens, before many years a marked decline in the value of gold may be looked for. But the limit of the capacity of different countries of absorbing gold has not yet been reached, and satiety is not yet in view. But it looks as if within calculable time, we shall hear the unfamiliar cry of an over-production of gold.

THE MILLINERY TRADE.

On August 30th the wholesale millinery houses of Toronto will reopen their warerooms to the retailers of Canada, and the autumn trade of 1897 will have commenced. There is every prospect that the coming season's trade will be a successful one, from the standpoint of wholesale merchants, retailer, and consumer. The foundation of the prosperity of this country rests in the main upon the industry in which fifty-nine per cent. of its inhabitants are engaged—agriculture. The crop reports from the cereal-growing provinces are, on the whole, very satisfactory in spite of unfavorable harvest weather in a number of districts. The dairy industry was never in a better position. The wool season has closed after a quick movement and comparatively high range of values. While there is no indication of a "boom," everything points to a healthful trade during the autumn season of 1897, and the milliners expect a fair share of the reviving prosperity.

Not many years ago the first day of the millinery openings resembled a mad rush of bargain hunters at a fire-sale rather than an assemblage of retailers purchasing supplies in the wholesale market. Purchases were mainly confined to the semi-annual pilgrimages to Montreal or Toronto. The wholesale merchants were especially prepared for these two great events, and the first buyer on the scene got the bargains, while latecomers were compelled to take what remained, and hence the eagerness displayed in the first day's purchases. But the experiences of trade have shown the folly of this method of doing business, and a new order of things is being gradually brought about.

When purchases were made on two occasions in the year there could not but be an immense waste. It was impossible to predict with accuracy the season's styles. Some of the purchases met with favor, and others failed to win popular approval. Stocks were large, and the percentage of losses through deterioration in quality by the uncertainties of fashion were a great drain upon the gross returns. Fashions are not created in a day; they grow. Although the new models to be shown during the next two weeks in Toronto and Montreal will in all likelihood be in the very best of taste for the coming season, they aret subject to additions. New ideas "fresh from Paris," will be constantly received during the autumn season. The department stores and large importing retailers will have them, and in order to compete effectively with these forces, milliners the country over must be prepared to take advantage of the changing styles.

Next week the wide-awake retailer will be early on the scene, make a complete inspection of the wholesale stocks, and a careful selection of the goods necessary for his own opening some weeks later. The stocks purchased will not be incomplete, but at the same time purchases will be made with a view to frequent renewals as the changing season requires.

In no way is the development of this hand-to-mouth policy of purchasing in the millinery trade more important than in the reduction of long credits. When all the supplies for the season were bought in one week, the day of payment often brought a bill far greater than the resources of the retailer. A distribution of purchases over the year means shorter credits and in general more satisfactory trade conditions to all interested in this important industry.

A HALT IN TIMBER EXPORT.

There is some significance in the opening sentences of the circular of Farnworth & Jardine, Liverpool, dated 5th inst., part of which we reprint elsewhere. After stating the tonnage arriving with timber, which was larger for July last, than for either of two previous July's, the circular goes on to say of Canadian woods: "Business has been dull; imports have been on too extensive a scale . . . . stocks have accumulated, and in many instances, are much too heavy. Values have been difficult to maintain, and in some articles a considerable decline has to be recorded." Going into particulars, we learn that in waney and square pine timber the stock is quite ample; second-class hard to move. Of pine deals and boards the arrivals have been very heavy and the stock much too large. Of spruce deals there has been an enormous import from New Brunswick and Nova Scotia, especially during July, and they are now difficult to sell; New Brunswick and Nova Scotia pine deals being only saleable at very low rates. Something similar is said of birch. Now there is a plain warning here that Canadian exports are overdoing the market of the United Kingdom with our woods, and they had better call a halt. True the above quotations refer to the Liverpool market, but Liverpool receive more timber than any other port in the British Islands, more than any two or three, if we except Cardiff. The tonnage of ships carrying Canadian wood to Liverpool was 55,000 in first half of 1895; 70,000 in 1896 and 94,000 in 1897.

We append a list of comparative imports at Liverpool of leading articles for the three years to end July:

Import of		1895.	1896.	1897.

THE BRITISH ASSOCIATION.

The gathering of Wednesday in the Massey Hall, where the past president of the British Association welcomed his successor, who proceeded to give his address, was a memorable one. And so, indeed, was the previous welcome meeting in the Pavilion at the Gardens. One could scarcely fail to be moved at hearing venerable men, grown grey in scientific pursuits, encouraging one another, and thanking one another for labors that have inured to the good of the world. While what the Governor-General said in a jocular way about the influence this gathering might be expected to have in advertising Canada, was perfectly true, it is true also that there are many among us who look beyond this presumed selfish advantage and are glad to see and to welcome great men for their own sakes. And from what we have seen of the programme of sectional meetings of the association in Toronto University this week, very full opportunity is afforded, and has been seized by Canadians to read papers before this learned body. One paper, of which we heard a group of German physicists speaking in terms of interested anticipation, is that on the survey of the Alaska Boundary, to be given on Tuesday by Mr. Klotz, of the Ottawa Civil Service. Most happily the authorities of McGill University, assisted by some public spirited Montreal people, were able to seize upon some 200 of the trans-Atlantic scientists as they left the steamer, and showed them about that goodly city and the University, which is its pride. They were delighted with Montreal; and so far we have not met one of the visitors who is not pleased with what he has seen of Canada.

EXPORT TRANSACTIONS.

The generally interesting letter of our New South Wales correspondent, dated 10th June, and printed on 16th July, contains suggestions which merit repetition in the interest of some of our manufacturers who may have thought seriously of Australia as a likely field for export trade. The story of the Canadian who is selling Yankee-made oatmeal in Sydney and using Yankee methods of advertising to make a market may afford encouragement to some among us who do not realize the possible extent of that market, and are afraid to spend money in advertising. There is something about this oatmeal incident and in another paragraph of the letter, which reminds one of the San Francisco contractor who long ago supplied our North-West flour to the Japanese Government, and declared it to be made from wheat grown in Oregon. But the Japanese Consul, on coming to Canada found out the truth. And he has since found out much else about Canadian products suited for Japan use, and has given advice to our exporters which is worth considering.

In a recent issue the Winnipeg *Free Press* refers to this same letter in the following terms:

> The Australian correspondent of THE MONETARY TIMES is as good a commercial agent as if he had a Government appointment in his pocket. He is as watchful of Canadian interests as if that were his special duty. Not a letter but contains some evidence of his alertness. The last is full of hints, suggestions, and scoldings, one of which we quote: "The best oats in the world are, or were, going begging in the Canadian North-West at twelve and one-half cents per bushel, and here is presumably a first-class Canadian traveller selling oatmeal made in Central United States from inferior oats at twice the price. Some day or other Canadian capital and enterprise will bring these Canadian oats and the traveller together, and then Canadian oats will bring more money, and some young Canadians will not be compelled to leave their country to find a billet."

"What is the matter with Canadian grain men?" our correspondent asks. Oats and barley are bringing prices in Sydney that seem to indicate a market for Canadian grain, while blue peas are selling at $1.37 per bushel. He does not tell us where these blue peas are grown or whence they are brought, but blue peas are quoted 45 to 50 cents in Toronto, and say, 54 to 58 cents in Montreal. They are an expensive article to handle, and the quantity available is small. Besides, if Canadian blue peas are wanted in New South Wales there are lots of them in store in Glasgow and Liverpool. We have not data at hand from which to calculate the expense of carriage to Sydney. Ontario blue peas would cost perhaps $1.10 to $1.15 per bushel to lay down. But Manitoba merchants are the people to do this trade, if it be practicable, for they are nearer hand. A chance vessel at Montreal for Sydney might, however, offer Ontario grain dealers a chance to ship; blue peas alone would not be worth while.

In a previous letter, that of 12th April, it may be noted that our correspondent told us of the arrival of the largest cargo of Canadian produce and manufactures that had ever reached Sydney. "For the first time, every pound of flour brought by that steamer was Canadian." Manitoba flour was then in demand in New South Wales at higher figures than any other. But it is to be observed that "under the name of Manitoba flour various mixtures are being put on the market, injuring thereby the good name of the brand."

One thing there is which our exporters must bear in mind, if they wish to cultivate trade with Australasia, and that is that they must keep faith with the merchants whose orders they take, and not refuse to fill them for insufficient cause, such as a rise in price. Some refusals of this kind, attributed to Canadian manufacturers, are mentioned by our correspondent as "a rumor." Rumors of the kind are, however, not likely to arise without some cause. Any firm which does the sort of thing complained of, not only damages its own reputation, but injures the good name of Canada. And the Australian expresses his opinion of people who do it by lumping them with "damned Yankees," an expression which may be taken to mean that they have been victimized in this way by some of the too clever exporters of the United States. We Canadians cannot afford to be distrusted in this way, and as a rule we are not. In the beginning of any business the proprietor who would ground it solidly must be truthful. It is the same with a nation, aiming at an export trade. Lying is often convenient, sometimes easy, but it does not usually "pay" in the long run. It is as true in commerce as in morals that, as the Autocrat put it, "Sin has many tools, but a lie is the handle that fits them all." An habitual liar is sure to be found out; and in addition to the distrust he inspires in some—contempt in others—he will by-and-bye perceive something that will hurt him worse, viz., he will lose his trade.

In marked contrast with the ideas of possible future trade, entertained by the American who contracted to spend $5,000 in advertising oatmeal in Australia, are the expectations of some Canadian houses, who, without spending 5,000 cents, and without waiting a reasonable time for their wares to be canvassed, demand from their Australian agents orders for $10,000 or $20,000 worth per return steamer. It may be that the wares in question were excellent, that the short-sighted Australian merchants ought to have bought them, and the benighted Australian consumers ought to have used them—we do not know, of course, who the firm was or the nature of their goods—our correspondent does not tell that. But to expect voluminous orders on such short notice from a new market shows very little knowledge of the usual course of foreign export trade. Indeed, no such return could reasonably be expected from a like venture in the home trade.

TORONTO TRADE FIGURES.

The monthly bulletin of the Toronto Board of Trade for July shows a decrease in the foreign trade of Toronto as compared with the same month last year. Imports were of the value of $1,545,138 and exports $468,371, aggregate $2,013,509. In July, 1896, the imports amounted to $1,847,618 and the exports to $309,899, aggregate $2,157,512. The decline was thus in imports, since exports show a large increase. A comparative list of principal items of dutiable import will be found appended:

DUTIABLE IMPORTS.

	July, 1897.	July, 1896.
Cotton, manufactures of	$86,907	$ 87,168
Fancy goods	53,807	40,165
Hats, caps and bonnets	16,656	10,683
Silks, and manufactures of	71,900	65,837
Woolen goods	250,460	152,468
Total dry goods	$479,730	$356,321
Brass and manufactures of	$ 4,920	$ 4,326
Copper "	303	242
Lead "	6,990	3,184
Iron and steel "	108,398	92,162
Metals and composition	5,253	6,301
Total metals	$125,864	$106,215
Bicycles and tricycles	$9,176	$21,390
Books and pamphlets	18,790	26,575

Paper and manufactures of	30,948	30,859
Spirits and wines	5,548	6,647
Wood and manufactures of	5,248	7,019

The marked increase in import of woolen goods is the feature of this list; in other respects there is no great difference between it and that of the previous July. Of metal merchandise, bicycles, &c., the import was but small. Free goods imports were $421,000 in value as compared with $394,870 in July, 1896, an increase being shown in such raw material as hides and skins, wool, india rubber, jute cloth, sisal and manilla as well as in steel rails for railway use and settlers' effects. A considerable item of import in the previous July was coin and bullion to the amount of $461,754, where last month the value was only $18,435.

CANNED SALMON A HEALTHFUL FOOD.

A paragraph in the Canadian newspapers this week announces the death of two children at Mount Forest, Ont., through having eaten canned salmon, the inference being that the tin of salmon contained some poisonous substance. This statement was made, we believe, without a thorough investigation as to the cause of death, and is calculated to do serious injury to an important Canadian industry. Several months ago charges were made in the English newspapers that British Columbia canned salmon was prepared without regard to health conditions, and had been the cause of numerous deaths. When investigated these charges were proven false, and found to be instigated by ignorance, and in one instance, by downright hostility to the industry.

A representative of THE MONETARY TIMES visited several weeks ago, a number of the salmon canning factories in the Pacific Coast Province. It was found while upon the spot that the canners prepared their fish with the greatest care. The fish were thoroughly cleaned, an abundance of fresh, pure water giving the final operation a special value. Fish caught in the morning were put into tins at these canneries during the same day, and any fish which by chance were not in first-class condition were promptly rejected. The majority of the British Columbia canneries are fitted with the most improved plant, and are able to can the fish with wonderful speed and thoroughness. Every precaution is taken in sealing the cans to prevent acid or any poisonous substance from coming in contact with the fish. If ever food was prepared with regard to the conditions of health, it was in the canneries visited by the correspondent of this journal.

BANKING RETURN.

We give below a condensation of the figures of the statement of Canadian banks for the month of July. It is compared with the bank statement for the previous month, and shows capital, reserve, assets and liabilities, average holdings of specie and Dominion notes, &c.

CANADIAN BANK STATEMENT.

LIABILITIES.

	July. 1897.	June, 1897.
Capital authorized	$73,258,684	$ 72,958,684
Capital paid up	61,952,129	61,949,536
Reserve Funds	27,070,799	27,020,799
Notes in circulation	$32,709,475	$32,366,174
Dominion and Provincial Government deposits	6,736,845	7,514,236
Public deposits on demand	72,609,727	71,466,457

Average amount of specie held during the month	8,681,771	8,702,067
Average Dominion notes held during the month	15,873,894	15,678,018
Greatest amount notes in circulation during month	33,755,738	33,070,121
Loans to directors or their firms	7,168,617	7,737,674

MONTREAL LETTER.

BUSINESS, REAL ESTATE, THE HARBOR, ETC.

Yon should ask me something easy, at this time in a hot month, when the American versus Canadian yacht race is going on at Lachine, and I should like to be there; and the nobs of the British Medical Association are assembling, and I am expected to be with them. You might, I say, ask me something easier than to sit down and fill half-a-dozen sheets (with the assistance of my stenographer) all about business, business, business. But I must try and get my thoughts into line, though the series of questions you ask me are not to be answered briefly.

To your first query, I answer, No—there is nothing settled, so far as I can find out, about the Montreal harbor plan. The Minister of Public Works talks, and writes and fusses about, avowing the utmost anxiety to do the best he can for Montreal in the matter. But the fact remains that he ignores the repeated recommendations of the various English commercial bodies about the harbor, and says, in so many words, that he knows better than they do. It is generally believed in business circles in Montreal that he favors, as his predecessor in office did, a group of speculators or proprietors at the East End, mostly French, for reasons that can be guessed at without unduly straining one's powers of inference. He has got a plan "of his own," which some people laugh at; though it seems he has got a good-natured minority of even the Harbor Commission to favor it.

Business in the factories here, and among the importers of the city, is by no means booming, although it is brisker than it was in the twilight before the declaration of the tariff. There is a half-hearted air about a number of the manufacturers though, who feel that there is an official knife hovering about the vicinity of their ribs, and still they cannot quite tell whether they are dangerously stabbed or not. One man put it strongly in conversation, but too profanely for publication in your columns. What he meant with respect to one industry may be stated, for the public eye, in the words of some Montague or Capulet:

> "The hurt is not so deep as a well, nor so wide as a church door, but 'tis enough."

Our exporters are fairly busy, and the feeling in grain, because of the rare active demand for wheat from Europe, is uncommonly buoyant. The advance of the last month in price of wheat is a most promising thing for Canada, which is likely to be blest with a good harvest—though, mind you, people on the Corn Exchange shake their heads over the news of excessive rains in Ontario and untold hazards in Manitoba. And they are plagued too, by a feeling that the big overshadowing promise of a huge surplus crop in the United States, added to the incomprehensible antics of the Chicago "wheat-pit" may play the mischief with prices even yet.

Both here and at Quebec timber and deals are active, the Old Country market keeping fairly firm, but there is some danger of over-stocking transatlantic markets. And dairy products keep moving in a lively style, as the export returns of both cheese and butter show. The Quebec Government has kept up its instruction of the French armers of this province until now they do really turn out very fair cheese, and butter, too, by means of the factory system, which, however, needs to be made more widespread.

I have not heard anything about Toronto real estate for a good while. Is it not time the cloud was lifting a little? Four years ago they told me up there it was as black as could be, and that any change must be for the better. Here, I am glad to say, there are signs of improvement. On the outskirts of the city, say at Westmount and in St. Jean Baptiste ward, a fair amount of building is in progress. This demand for dwellings is probably caused a good deal by the effect of the street railway service, which is pretty near as good as yours now. Figures show—they sometime lie, I know, but still the figures show, and you wont expect *Simpson's Record* to lie, for he is a truly good man. Again I say figures show that in July there were 151 transfers of real estate, to a total value of $591,299, whereas in July, 1896, there were only 121 transfers, amounting to $331,904.

You may not have noticed, but I think it worth mentioning, that in the last month or two more than $700,000 of money has been lent on Montreal West real estate, and the bulk of it at 4½ per cent.; some at 5, a little at 6 and 6½. But on property in the East Division loans bring a higher figure, for there no money was lent at less than 5, and a good deal at 6 and 7 per cent. This, I presume, because the western properties were of a better character. Anyhow, the city keeps on growing. I wish I could think it grew more English.

I thought to give you something about the big electric enterprise near Rossland that Hosmer has got into with some English or Scotch people, but I see by a late MONETARY TIMES that you have got particulars of it. But this, and the Chambly power scheme, and even the Lachine Rapids power enterprise are nowhere now, or will soon be nowhere, for have you heard of the Massena scheme? That is the biggest yet! It is nothing less than to use the waters of the St. Lawrence as they tumble into the Sault Rapids near Massena, N.Y., and guiding them through a short canal, harness them for power purposes, in the hope of building up a huge manufacturing town on the south bank, and may be to transmit that power electrically to great distances.

Well, this month is more than half gone, and you will soon be having your big Exhibition on again, in September I suppose as usual. Our show begins this week, but I fear it won't be extensive, though they try hard enough. Try and not get too scientific, with your British and American scientists meeting this week. And when you get lonesome for a little plain commercial hard sense again, just come down here and let us take you to Lachine.

Montreal, 17th August.

* * *

IRON WORKS IN NOVA SCOTIA.

It is a very significant feature of the Nova Scotia and Forge Company's report for 1896-7 that the stock of manufactured material that company had on hand at the date of the annual meeting last week has been written down to the extremely low values at present ruling—making a reduction of $63,750 as compared with the existing values at the same time last year. As a consequence there has been a loss of $4,687 on the year's operations of the company. If we read the report aright, the low prices of iron in the United States and the fact that American pig is knocking for admission at the gates of every considerable town in Canada, has forced this company to lower values of its stock on hand and so brought about the deficiency complained of.

The report presented expresses the directors' regret that the result of the year's business has not been satisfactory. They refer to "no improvement in prices in the United States," as one of the great causes why it was "impossible to realize any profit." The advantages predicted "last year from the control of pig iron through amalgamation [We presume the amalgamation, in 1895, of the New Glasgow Iron, Coal and Railway Co. with the N. S. Steel and Forge Co. is meant.] have been realized," but "the lower prices prevailing for the finished product have been more than an offset." The report then goes on to charge to "tariff changes" that "the prices of the company's output had to be largely reduced, and, unfortunately, provision was made for the payment of increased bounties only from the date of the passing of the act" instead, as the directors think, should have been "from the date of the introduction." "The demand for pig iron has been fair, but lower prices had to be accepted." Five thousand dollars of bonds of the company were sold during the year. To meet the low prices complained of the "directors have reduced the wages and salaries of all the workmen and officials."

It seemed natural, from what we have heard of these New Glasgow works, and the pluck and enterprise of their proprietary and management, to expect a more favorable account of the year's work than this. If we interpret rightly the latest arrangement of the iron duties, these works not only receive a bonus of $3 per ton for their pig iron, but they get also a protection of $3 per ton on steel blooms. Whether it is the fault of the tariff or not, it is unwelcome news to hear of such an important concern as this going behind, especially when the older Londonderry Iron and Steel Co. is offering its works and property at auction.

The directors elected for the ensuing year are: John F. Stairs, president; Graham Fraser, vice-president; J. W. Allison, James D. McGregor, John McNab, George Stairs, George F. McKay, and H. S. Poole.

AMERICAN BANKERS' ASSOCIATION.

That important body of men, the American Bankers' Association, assembled in their twenty-third annual convention at Detroit, on Tuesday last. The programme called for an address on the first day from the Secretary of the Treasury, Lyman J. Gage. The next day witnessed a series of brief statements of the condition of business in various States; then a discussion on practical banking questions, open to all delegates. And a feature of the roster was an address by Mr. Eckels, Comptroller of the Currency. A question propounded for discussion was, whether a bureau of information to prevent losses from bad debts was feasible among banks? Another query which opened up a wide vista, was propounded by a man from Virginia. He asks, "What legislation is needed with respect to Currency?" and the answers to this momentous question are by no means unanimous. Other subjects of debate were Savings Banks; Clearing Houses for Country Checks; Organized Capital, its Privileges and Duties; the last topic of the day being: Would Branch Banks in the United States be Beneficial or the Reverse? a subject introduced by Mr. Wm. C. Cornwell, president of the City Bank, Buffalo. In the course of this, Mr. Cornwell had the manly boldness to say: "Because of our unsound currency system, which Politics will not allow to be remedied, we have been working four years for nothing business concerns have made no profit, and have been steadily using up their capital. Alas, poor America—my poor countrymen. Are we then a nation of slaves? Not more binding, grinding, misery-breeding the tyranny of Russia, than this tyrant Politics, which rules our business world."

On the third day, the business was curtailed to permit of social engagements being fulfilled. A Baltimore banker opened the discussion upon "Comparative Profit of Trust Companies and Banks," and there were some questions of indoor administration debated, also papers on "Currency Shipments by Registered Mail," and "Express Money Orders," by Iowa and Georgia bankers respectively. A feature of this day was the handsome entertainment of the Association by Hiram Walker & Sons, limited, at Walkerville, Ont., by means of the firm's fleet of yachts and ferry boats on the glorious River Detroit.

A WORD OF WARNING.

An esteemed subscriber, who is one of the principals in a Canadian manufacturing and exporting house, writes us on 17th inst. as under: "Last month a Canadian manufacturer asked us to get a report of a firm in Rotterdam, Holland, from our correspondents there. The party enquired about had written the Canadian house for samples and quotations, and were entire strangers to them. In due course, the Canadians received an order for about $500 worth of goods, when we sent for the report as above stated. In order to put Canadian manufacturers on their guard, we give you below the reply received."

This reply is in the following terms: "I am in receipt of your favor of 26th ult., and in reply I beg to say that the people named in your letter are swindlers of the worst sort; you may call them thieves, more dangerous than the common ones. I am sorry to say that our country during the last few years has been infested by similar individuals, and for this reason their names are regularly published by the police, also in some of our weekly newspapers and trade reviews which are also publishing the letters by which these individuals are sending orders to merchants and manufacturers. If you will send me the letter sent your friends, I will see to it being published here."

FOREST FIRES IN OUR GREAT WEST.

An observant traveller, and a lover of nature, who has just passed eastward over our great national trans-continental highway, writes that he could not help contrasting a previous trip over the C.P.R. with the one just made, and noticing with pain and regret the terrible devastation that has taken place in our forests by fire during the years intervening since the railway has been completed.

Nearly all the lower portion of the fertile Fraser River valley now presents a completely changed aspect. No longer can one see close alongside the railway track immense quantities of magnificent cedar and of the famous Douglas fir, which trees abound all along Puget Sound. These once magnificent monarchs of the forest appear to have been completely destroyed by the lumbermen's steel and the dreadful fire-fiend which shortly afterward followed them. Bareness and desolation appear on every hand as a consequence. What is now left of these once grand coniferous forests is in many places only charred and blackened spikes or masts, rising sometimes over a hundred feet into the air. At their feet lie portions of huge trunks of trees partially burned and now rapidly decaying. For hundreds of miles in the mountains either the locomotive sparks, the prospector's pipe, or the Indian camp fire have caused similar destruction. Although the timber was much smaller and not nearly so valuable, at the greater altitude, still, it made a lovely covering for the base of the noble mountains, and thus presented to the tourist a beautiful and ever-changing aspect. Now it is saddening to see these trees standing lifeless and the poor rocks on which they had grown lying uncovered with their mossy, velvety, and plushy variegated carpets entirely removed.

Notwithstanding all this dreadful fire-fiend destroying of floral landscape, these magnificent mountain and glacier-covered peaks will continue to bring immense sums of money into the coffers of the Canadian Pacific Railway Company, for, as you have said, Mr. Editor, landscape has money value. No other trans-continental route presents such a wealth of mountains, rivers, and rivulet, nor can hope to attract tourists from all over the world as this company's line is now doing. Even the somewhat monotonous prairie section of the road, extending hundreds of miles, affords much attraction and enjoyment to the passengers, especially when compared with travelling over lava and sand beds for long distances through some of the valleys traversed by certain of the more southerly parallel lines, particularly during the hot season of the year."

RED CEDAR SHINGLES.

Our readers know of the introduction to the markets of Eastern Canada of red cedar shingles, made near the Pacific Coast of British Columbia, and the readiness with which they were welcomed by those roofers who wanted a good and durable article. The trade, however, has had its ups and downs. We observe that in a recent issue of the *Northwestern Lumberman* makes a plea for the policy of honesty in the above trade on the American Pacific Coast, saying that "the red cedar industry of Washington must grow and become of commanding magnitude if producers and dealers adhere to the policy of furnishing good and reliable shingles only."

Where last autumn the trade in Washington red shingles was much depressed, the market was over-supplied, and there was no profit in the business; indeed failures were numerous. There were those who predicted that the red cedar shingle industry had seen its best days, that users in the interior had become tired of red cedar, and were returning to the white cedar and pine of Michigan, Wisconsin, and Minnesota, and the cypress of the south. But, says the *Lumberman*, when spring opened "the demand for red cedars began to swell, and became so large as to tax the utmost capacity of the railroads to carry them eastward. The quantity now being shipped is said to amount to 2,000 car loads a month. The shingles are distributed in every northern State east of the Rocky mountains, going in large quantities as far as New England."

BRITISH COLUMBIA MINING.

The following paragraphs are taken from the August number of the *Mining Record*, of Victoria:

We have all along predicted good travel into the Kootenay district this season. Up to now our predictions have turned out to be correct. The steamers "Nakusp" and "Arrowhead" are running with full lists of passengers and freight, and we understand that business coming in from other directions is good. The class of passengers coming in this year is also of a more desirable sort As a rule they have something behind them; some capital to come and go on, and are visiting the province with the purpose of taking a stake in it. During previous seasons there were too many coming in bent on pure speculation, with little, if any means of their own, looking for something to turn up, while others were in quest of "soft snaps," which in most cases never materialized.

The speculative boom has fallen flat, as we all along predicted it would, and now mining men are getting down to straight business. Matters are getting on a firmer basis, and general confidence is becoming stronger each day. In the meantime the occupation of the company promoter has largely dwindled into thin air and his absence from the mining camps is certainly not regretted We do not mean by this that we are entirely rid of these human sharks, but their day is past and their power as a body will never be felt again. What is to become of hundreds of the mining companies registered on the books of the province, which so far have nothing to show to justify their existence, is more than we can say. We fear a day of reckoning is not far off. Our only hope is that the guilty will not be allowed to go free and the innocent suffer.

One of the greatest commercial and railway centres in Kootenay will be Nelson, as soon as the Crow's Nest Pass Railway is built. Its possibilities at the present moment are hard to predict, but our opinion is that Nelson, as a shipping, commercial and railway centre, will be the chief city of Kootenay. As a mining town we think it may not have as good a standing as other places now coming to the front.

A LIFE ASSURANCE CASE.

A case in which much interest has been taken in life assurance circles is that of Fleming vs. London & Lancashire Life. It has been before the courts for some time, and was recently taken before the Judicial Committee of the Privy Council, where judgment favorable to the company was delivered a fortnight ago. A synopsis of the case and the decision of the Privy Council is given in the London *Standard* of August 4th. This was an appeal by the company from the decision of the Court of Appeal for Ontario. The action was brought by Jean Fleming, as assignee of two policies of insurance for $5,000 each (issued in December, 1894), upon the life of one James Fleming, her son. The assurance was effected by Mr. W. H. White, agent for the company in Toronto. The company declined to recognize the policies, on the ground that they were null and void, in consequence of non-compliance with the terms and conditions endorsed on the policies. The company also alleged at the trial, that the assured had been a victim of consumption when the insurance was placed, and that the policies had been obtained by fraudulent means. The counsel for the plaintiff, to avoid the necessity of the company's counsel putting in evidence to prove this, admitted that "on or about first January, 1895, the assured developed incipient consumption, of which he died," some time in June, 1895, following.

The policies were delivered by the agent to the assured, who gave therefor two promissory notes, which were payable to the agent himself, and which the agent discounted. The usual course of the business was that where notes were taken for premiums, such notes were forwarded to head office, and pending the acceptance of the notes by the head office, the agent gave an interim receipt, followed in due course by an official acceptance receipt, and policy, it being the agent's duty to retain the latter, until the premium had been actually paid in cash. Mr. White did not advise the taking of notes, nor did he remit the cash to the company, but sent his own note for balance due, requesting the company to hold the same, presumably till Fleming's notes were paid, which was complied with. The notes which the Flemings had given White were not paid, nor did White (consequently) pay the note he gave the company. The Fleming notes were retired by White as endorser, following their maturity. Some time in June, James Fleming died, and payment of the policies was demanded, but in view of the suspicions surrounding the case, and the nonpayment of the premiums, the company refused payment. The case was tried by Chief Justice Meredith, and judgment was given against the company, with costs.

An appeal was taken to the Court of Appeal for Ontario. The court consisting of four judges, divided, two delivering judgment in favor of the London & Lancashire Company, and two against, which in effect confirmed the decision of the Chief Justice. The company then appealed to the Judicial Committee of the Privy Council. The judgment of the committee was delivered by Sir Henry Strong. "Their Lordships," he said, "saw no evidence to sustain the assumption that the notes were placed in the hands of White, the company's agent, with the object of negotiating them, and paying the premiums out of the proceeds, the onus of proof was upon the respondent (Fleming) to show that the premiums had been paid, and this she had entirely failed to do. Their Lordships were, therefore, of opinion that the judgment could not be supported, and they would advise her Majesty to allow the appeal, the respondent to pay the costs."

A CHANGE IN THE MERCANTILE FIRE.

Owing to increasing years and a desire to enjoy the fruits of many years of hard and conscientious labor in his chosen profession, Mr. James Lockie will retire from the active management of the Mercantile Fire Insurance Co., of Waterloo, and assume the office of president of the company, in place of Mr. W. A. Sims, who resigns to make way for him. The underwriting for the company will, from the 1st September next, we understand, be under the charge of Mr. Alf. Wright, Confederation Life Buildings, Toronto, but Mr. Lockie, as president, will still continue to lend his valuable advice and assistance. Mr. Gale continues inspector for both the Mercantile and London and Lancashire. He and the entire office staff will remove to Toronto, the change taking effect from the 1st September. Toronto thus practically gains another financial institution, and the result of the move should prove beneficial in building up the Mercantile business.

ON THE CHEESE BOARDS.

The offerings on the Ontario cheese boards have bee much smaller than in previous weeks. At seventeen board meetings only 19,939 boxes of cheese were boarded as compared with 26,947 boxes at fifteen meetings last week. The advanced season is evidently having a telling effect upon production. The shipments from Montreal continue large, amounting last week to 72,373 boxes as compared with 68,387 boxes for the corresponding week last year. The total shipments to date are 968,552 boxes as compared with 758,189 boxes, shipments to date last year. Our usual table of cheese transactions during the week are as follows :

Boards.	Date of meeting.	No. of factories.	Cheese boarded. Boxes.	Cheese sold. Boxes.	Price. Cts.	Date o next meeting.
Kingston	Aug. 12	..	1,522	280	$8\frac{1}{2}$	......

HINTS FOR PUBLICITY.

It is as easy to put a lie into an ad. by pictures as by words. ——Advertising without a plan is like a ship without a rudder. ——It takes more than space in a newspaper to make good advertising.——"Circumstances alter cases" in advertising, as in everything else.——A gentle hint patly put is often worth more than the blast of a big trombone.——These and other sententious statements on the important subject of advertising are to be found in the last issue of *Printer's Ink*, a paper which has made a study on both the theory of advertising and the practical illustration of the most likely methods of it. The case of an actor or a lecturer subject to stage fright is instanced. Such people often find it advisable to select some kindly face in the audience and talk to that face, ignoring the rest of the assemblage altogether. In a similar manner, says that journal, the advertiser should call to mind some particular person when writing his announcement, and thus direct his talking to a particular personality. The hint may be taken by others than writers of advertisements. Stil', the disposition, in writing to a friend is often to be too wordy. Advertisements, like editorial articles, if too long are not likely to be read. To quote again from *Printer's Ink*, "To know the merit of brevity and where to put the final period is as good for an advertisement as it is for an oration."

FOR GROCERS AND PROVISION DEALERS.

The Lake of the Woods Milling Company has recently shipped from Vancouver, B.C., a carload of Manitoba flour to the Klondike gold country.

Cable advices received from Shanghai report higher market for teas, with a good demand from American shippers at the advance, and also state that indications are that the second crop will be short.

Word comes from Gaspe, Que., that most of the Douglastown fishermen who go to Anticosti to fish have met a complete failure, the whole catch amounting to less than one hundred quintals of fish for thirteen boats.

It is estimated that the salmon pack on the Skeena River, B.C. will total 71,000 cases, made up in part as follows; Northern Pacific Canning Co., 7,500; Inverness, 9,000; Aberdeen, 8,000; Balmoral, 6,000; A. B. C., 7,500; Kuna Packing Co., 7,500; Carlisle Canning Co., 6.200; Claxton. 6,000; Standard, 6,000 Lowe Inlet, 8,000.

The advices of a prominent New York house on new crop Persian dates are to the effect that shipments will not take place until October 10th, against September 30th last year, as the first tides will be very late. No direct cargo is expected in London this year. The first arrivals are looked for there about the third week in November.

The stock of peanuts in Norfolk, Virginia, on August 12 is reported by a circular letter of Messrs. C. De Witt & Co., to be less than 55,000 bags; a year ago it exceeded twice this amount. The cleaners have been forced to supply their wants from the country, buying round lots of farmers' stock for August delivery at 3c. This practically means a 4¼c. market for handpicks, an advance which we look for before the end of August, and if stocks continue to decrease as they have in the last two months, you may expect 5c. on handpicks before November's new crop.

Some sensation has been caused recently in the Winnipeg Grain Exchange in regard to the report that a syndicate was buying up all the elevators on the Northern Pacific between Winnipeg and Brandon. It was the opinion of Winnipeg grain men that the report was quite untrue, and that the farmers along the line need have no fear of a monopoly. It was stated that instead of a monopoly the competition along this line during the coming season was likely to be more keen than ever before. The Dominion Grain Company and the Manitoba Grain Company, as well as Martin, Mitchell & Co., who have been the most extensive dealers, will during this season operate on the Northern Pacific route, and they are building new elevators at several points. With such powerful competitors, remarks the *Free Press*, it is scarcely likely that there will be any elevator monopoly.

Messrs. Smith, Baker & Co., writing from Yokohama, July 16th, say: "There has been a steady demand for teas since the issue of our last circular. Prices have been well maintained throughout, and are now quoted at least $3 or $4 per picul over last year's rates. The quality of the second crop is not equal to last year's in leaf, but the cup is fairly good.

Comparison of tea for corresponding periods past seasons:

From Yokohama and Hiogo –	Current Season,	1896-97.	1895-96.
Eastern States and Canada	19,001,216	13,852,047	22,588,384
To San Francisco	2,618,045	1,293,308	1,056,952
To England	....	....	149,373
Total	21,619,261	15,145,355	23,794,709

Comparative table of total export tea:

Eastern States and Canada	37,784,430	44,435,783	41,973,831
To San Francisco	4,831,720	4,356,539	3,726,675
To England	423,274	291,376	522,598
Total	43,039,424	48,973,698	46,223,104

Many United States grocers had been asking why Brazil coffee has continued so steady in the face of heavy receipts and dull trade. G. E. Weyl & Co., of New York, make the following reply: "We think the explanation is simply that prices are already too low," and then they quote statistics showing that from 1882 and the three following years were those of the largest supplies of which we have any record, the supply declined 1,000,000 bags on a total supply of 5,000,000, and still the price to-day is lower than in 1882-86. On the other hand, as showing how opinions may differ, a leading coffee importer tells the *Shipping List* that receipts were never larger in any month than in July, the record for one month being 979,000 bags, of which 359,000 were received at Rio, and 620,000 at Santos. The total for July of last year was 802,006 bags, and for the corresponding month of 1895, 392,000. . . . . . "The low values prevailing have been brought about by the weight of the article itself. There has been no manipulation of the market, unless it has emanated from large holders, whose interest was to advance the price. Otherwise, it has been entirely free from such influence. Coffee prices will find their own level."

IN THE DRY GOODS STORE.

Trade with Great Britain in linen goods, cuffs, collars, and shirt furnishings has increased during the past several months, as a result, it is said, of the new tariff regulations.

Hand-knitting was first spoken of in Germany in the middle of the sixteenth century. The art was known in Berlin in 1590, but it was chiefly spread through that empire by refugees from France after the revocation of the Edict of Nantes. These carried to Hesse the first stocking looms known there. The first stocking frame which was seen in Vienna was taken thither by one Becker, who constructed others of wood.

Reporting on the trade of Shanghia in 1896, British Consul-General Hannen specially refers to the growth of the cotton, spinning and weaving industry there. None of the new factories recently set on foot started working during 1896. But the buildings were erected and machinery put together preparatory to beginning operations this year, and before the year is out, he says, there will be about 275,000 spindles in operation.

The last issue of the *Draper's Record* contains the following list of recent arrivals in British markets: Mr. A. W. Grasett (Messrs. Wyld, Grasett, and Darling, Toronto), P. H. Burton (Messrs. Caldecott, Burton, and Spence, Toronto), Mr. Stanley (Messrs. Stanley Brothers, Charlottetown, P.E.I.), Mr. R. Brock, jun. (Toronto), Mr. J. Torrance (Montreal), Mr. J. W. O'Hara (Toronto), Mr. John Murphy (Montreal), Mr. R. S. Waldron (Kingston, Ont.), Mr. A. R. McMaster (Toronto), Mr. J. W. Stewart (Charlottetown, P.E.I.), Mr. W. G. Smith (Messrs. Manchester, Robertson, and Alison, St. John, N.B.)

In connection with an event which is familiar to all Canadian newspaper readers, the British *Draper's Record* says: "The latest startling development in connection with the John Eaton Company, Limited, has been subject for gossip in the trade during the week. Indeed, I may safely say that for the last nine months or more no Canadian concern has been so much talked about as this ill-starred company. Even those who are now fortunately creditors are wondering how they got into it, and how it was that they were not kept out of it. That is a matter for those Canadian authorities who profess to know everything; but it seems to me that houses throughout have been thoroughly misinformed, and can do nothing now but eat the leek."

The British drapery authorities have decided that men's heads are becoming smaller. The conclusion is based upon the experiences of hat manufacturers, who report that the average size in hats has been reduced within the past several years. In the Canadian trade, which is largely supplied from the Stockport and Denton districts, it is stated there has been a marked decrease in the size of adult heads. The French population of the Province of Quebec shows an average of No. 6, ranging from 6 1-2 to 7 1-8, a dozen selling in the following assortment: One hat of 6 1-2, two of 6 5-8, three of 6 3-4, three of 6 7-8, two of 7, and seven of 7 1-8. In Ontario the English population, according to the investigations of a wholesale firm in the Montreal trade, wear the following sizes in a dozen: Seven of 6 5-8, two of 6 3-4, three of 6 7-8, three of 7, two of 7 1-8, and one of 7 1-4. In the Maritime Provinces the maximum size is rather larger.

An amusing case came before Judge Meadows White, recently, in Clerkenwell County Court, the plaintiff being Arthur Roome, draper, of 125 Hornsey road, who sued William Muddyman, of 158 Cambridge road, Kilburn, for 12s. 8d. for goods supplied. Plaintiff stated that the goods consisted chiefly of flannel, and were supplied to the defendant's wife, who was now dead. At the time he understood that the flannel was to make shifts for the children. Defendant: "My children don't want no make-shifts." Plaintiff: "To make shifts—shirts, I said." (Laughter.) Defendant: "What's shifts? I don't understand.

Anyway, my children don't want no such things, and they were not for me." (Loud laughter.) It's like this, your lordship (addressing his Honor), these yer fellers come around and sell things to wives without their husbands' sanction, but they can't get their money without the husband's sanction." (Laughter.) His Honor: "Oh, no; nothing of the kind." Plaintiff: "I only wish the defendant's wife were here; she would soon prove it." Defendant: "If you mean my wife, she's gone to the courts above. That's better than these yer law courts." (Laughter.) His Honor: "Well, well, defendant had better pay plaintiff 2s. per month."—*Drapery World.*

TENNESSEE CENTENNIAL EXPOSITION.

From a description, appropriately illustrated, in the August issue of the *Inland Printer*, of the Centennial Exposition of Tennessee at Nashville, we obtain some interesting particulars of that display. The article, which we judge to have been written by the editor, Mr. McQuilken, says that the location of the exposition is an ideal one "for many reasons, the first of which is that the beautiful park in which it is situated is but the central point in a vast and beautiful region of country which perpetuates for hundreds of miles the very beauties which in their improved form make the exposition park a place of delight to every visitor. The proprietors of the park from which the exposition company leased it had spent something over a hundred thousand dollars in beautifying the grounds and making the prettiest and most attractive race course in the country, and when the exposition was an accomplished fact these improvements were utilized almost without alteration."

In this "park of two hundred acres, diversified with lakes and running stream," buildings have been erected which challenge attention. The central feature is a reproduction of that renowned old-world structure, the Parthenon, which forms the picture gallery, and near it is the History Building, a reproduction of the Erectheon at Athens. Then there is the Pyramid of Cheops, a structure contributed by the city of Memphis, Tennessee (so chosen because the original stood at Memphis in Egypt). A Woman's Building, a Children's Building, and even a Negro Building are further features; the Illinois Building is an exact reproduction, on a reduced scale, of the Administration Building at the Chicago World's Fair. The whole is a worthy display of the taste and resources of the Southern States, and should command many thousands of northern visitors.

—On Monday last Mr. E. S. Clouston, general manager of the Bank of Montreal, reached Montreal from England. He says, regarding the financial situation, that money was last month quite easy in London, but appearances indicate that it would be dearer this autumn. A good deal would be sent to the United States, and Japan was also expected to draw a considerable quantity. Heavy calls would also come from Austria, that country being at present engaged in the reorganization of its currency. Regarding United States securities Mr. Clouston said that they were looked upon with greater favor on the other side, notwithstanding Secretary Sherman's little eccentricities. Canadian securities were also all right, and the splendid earning power of the Canadian Pacific was warmly commented upon in the capital of Great Britain. The re organization of the Grand Trunk was also highly commended, and Englishmen appeared to have the fullest confidence in the management of both roads. Asked if the Klondike fever had reached England to any appreciable extent, Mr. Clouston remarked that everybody was talking about it. In fact, the three topics most frequently discussed in England at the present time were Canada's preferential tariff, the United States customs regulations, and the Klondike gold discovery.

—The general manager of the Imperial Bank of Canada, Mr. D. R. Wilkie, passed through Winnipeg *en route* to the Pacific Coast some days ago on a tour of inspection of the bank's western branches. While in the capital of Manitoba, Mr. Wilkie was interviewed on the subject of the condition and prospects of Canada, and said, in answer to a reporter's enquiries: "Satisfied? Never more so in our lives. Canada was never in as good condition as now, and everything indicates a very bright future. Everything is conspiring to make this country go ahead. We have England making sacrifices to increase her trade—the first time in history that the mother country has taken any steps to enlarge the trade of a colony. The mineral development is a great thing, the construction of the Crow's Nest Pass railway means a large expenditure of money in the country, and to top it all there are prospects of an enormous harvest. Nothing could be added that would make the outlook more cheerful. The signs of prosperity are not confined to particular provinces, but are general throughout the whole Dominion. We are on the brink of a great revival in business all over Canada."

CLEARING-HOUSE FIGURES.

The following are the figures of the Canadian clearing houses for the week ended with Thursday, August 19th, 1897, compared with those of the previous week:

CLEARINGS.	Aug. 19.	Aug. 12.
Montreal	$11,813,408	$11,180,649
Toronto	7,213,514	7,714,201
Halifax	1,308,891	1,542,013
Winnipeg	1,754,456	1,226,320
Hamilton	606,959	530,011
St. John	649,172	749,952
	$23,346,400	$22,943,146

Aggregate balances this week, $3,640,889; last week, $3,756,628.

BOOKS RECEIVED.

CALENDAR OF THE KINGSTON SCHOOL OF MINES.—This is the calendar of the fifth session of the School of Mining, in affiliation with Queen's University, and contains much that is of interest in these days of interest in Canadian mines. All communications are to be addressed to Wm. Mason, bursar, Kingston.

JOURNAL, ROYAL COLONIAL INSTITUTE.—Part 8, Volume XXVIII. contains Sir George Baden Powell's paper on "The Financial Relations of the Empire; Can They be Improved?"; also a report of the Queen's commemoration banquet at the Hotel Cecil, where Prince Arthur took the chair.

—Our manufacturers make a mistake, sometimes, in choosing names for their products, names that are either odd and inappropriate in themselves or else unduly praiseful of the article they profess to describe. In this connection we observe that the *Milling World* says:

"Did the miller who selects a brand for his flour ever stop to think that the superlative degree is a dangerous degree to use in naming a brand? Such brands as "The Best," "The Finest," "The Whitest," "The Unequalled," and so on invite comparison, and comparison and competition with a whole army of rival brands, made of the same kind and grade of wheat, on the same lines of machines, on the same processes, on the same length of system, and by operatives of equal experience and skill, must subject any one brand to a strain that is quite certain to end in disaster to that brand. The superlative degree is probably the least attractive feature in a brand, in the long run, that could be adopted. It hides no defect, and it only makes defects more glaring. Distinctive names are all right, but a mere bombastic superlative is not always distinctive." Canadians are not so bad as Americans in this particular, it is true. But we sin often enough by excessive boastfulness. Let us stick to the truth at all hazards; and even the truth need not be told in an offensively spread-eagle fashion.

—An idea of the quantity of rolling stock needed from time to time to replenish the waste and injury to cars and engines upon a great railway, is afforded by the following list of property furnished, or to be furnished, the Canadian Pacific road this season: There are 600 thirty-ton box cars building in the company's shops at Perth. They will be equipped with Hein or Trojan coupler, Westinghouse air brakes, standard brake beams, trucks and wheels made in the company's shops. Their steel axles are made by the Nova Scotia & Steel Forge Company. One hundred and thirty 20-ton flat cars have been rebuilt in the company's shops at Perth and Farnham; two hundred 20-ton flat cars are building by Rhodes, Curry & Co., of Amherst, N.S., and two hundred 20-ton flat cars are being built by the Crossen Car Manufacturing Company at Cobourg. Besides all this, the company is building one hundred 35-ft. refrigerators, equipped with all modern refrigerator appliances. As to engines, the prospects for active business may further be guessed from the following list of locomotives built since 1st January, or building, in the company's shops at Montreal: Ten switching engines, two consolidation engines, three 10-wheel compound freight engines, six 10-wheel passenger engines, 19x24, and six 10-wheel passenger engines 18x24 cylinders.

—The Bank of Montreal has made the announcement that a branch is to be opened at Lethbridge, Alberta. It is under the temporary charge of Mr. R. F. Reeve, late accountant of the Regina branch.

—A branch of the Halifax Banking Company has been opened at Middleton, Nova Scotia, and the management thereof will be in the hands of Mr. W. H. Chipman.

ELECTRIC POWER.

The mechanical world is on the tip-toe of expectation while watching the advancement of electrical science in the application of electricity as a motive power for railroad trains. There is no subject that is receiving more patient and thorough investigation at this time. The advantages, which are not few as measured by the conditions attendant upon the use of steam for the same purpose, are daily set forth in connection with the marking of each step of advancement; exultantly by enthusiasts and charily by the more conservative. Comparative estimates of cost are not lacking, and many are eager to first mark the final exit of the steam engine from railroad service, in which it is only now being brought to its greatest efficiency. Evidence is at hand to establish a very even balance as to cost, in many respects, and against the many things that are urged in its favor, this one seemingly insurmountable barrier is set as opposed to the general adoption of electricity as a motive force, namely, the present inability to provide a system that will send an electric locomotive out upon the road as an individual power in itself. Divorced from any parent plant or feeder, and thus rendered capable of taking care of itself and its train from station to station and from division end to division end, the electric locomotive would speedily supplant steam engines for reasons that are so apparent that they need no reintroduction here. But until this is done, and the application of this form of energy has reached a stage of development where, by storage or isolated production, each engine shall be enabled to pursue its allotted task, regardless as to power, of what other portions of the line may be doing, there is no hope for the general adoption of electric traction upon trunk lines nor upon any other surface road where the untoward conditions of the elements, as in storm with accompaniments of snow or excessive rain, can quickly and thoroughly paralyze an entire system. It is difficult—impossible, to say whether this independence of action will ever be obtained in electric equipment, but unless it is attained the steam locomotive occupies a place of usefulness from which it will never be dislodged by the electric motor. The third rail system is dangerous, and in many ways unsatisfactory, and the trolley is not less so. The hope of electricity for extensive and permanent incursion into surface railroading lies in its chances of being economically and sufficiently stored to enable it to periodically dispense with the constant generation of energy that is carried on in the process of steam propulsion. The advocates of compressed air seek to fill the breach between the two great systems of power application. They are making haste slowly or there are some of those bulldog facts being developed in practice which so roughly gnaw the sinews of theory. The field is new, truly, in each case, but there is nothing thus far shown for either system that calls for great enthusiasm when the devices employed are compared with the best types of steam locomotives. The indications all seem to be that there is yet a long and honorable day before the locomotive that we know in railroad work, as that term is generally accepted.—*Railway Review.*

THE TEMISCAMING DISTRICT OF QUEBEC.

An excursion took place last week from Montreal to Lake Temiscamingue, under the auspices of the Montreal Colonization Society. Gentlemen from Sorel, Hull, Quebec, and Montreal were present, and the party was swelled from time to time as the train went on, by farmers from the Counties of Richelieu and Mackinonge, until it numbered about 150. The *Minerve* of 12th instant, gives an account of the trip, from which we translate:

"Most of the farmers went north on this occasion to buy land, with the result that considerable sale of lots resulted from the visit. It is estimated indeed, that the Government agent sold, during the days that the excursion lasted, more than a hundred parcels.

While some of the visitors went to see the lands watered by the rivers Lontre and Blanche, others visited the more inhabited parts. All of them expressed delight at the conditions which they found, and surprise at the progress made in the Townships of Duhamel and Guiques. The village of Pointe des Peres was admired, possessing all the improvements one could desire. It has six stores, two resident physicians, and a population of 1,500.

It is understood that after several talks over the matter the Federal Government has at last agreed to give up to settlement the Indian Reserve near the River Quinze. The agent has had a talk with one of the chiefs of the small colony of Indians there, who says he is ready to cede this rather extensive inheritance. The necessary surveys are about to be made, and it is very probable that by next year this reserve will pass into the hands of the Colonization Society. It appears that the Provincial Government intends building the long projected railway from the River Quinze to the upper part of the Ottawa. This will be a great convenience to the settlers who wish to work in the lumber woods. The directors of the Society will ask the Department to build a horse road four or five miles long in Duhamel Township.

The excursionists one and all declare that the Temiscamingue region is capable of yielding perhaps the most abundant harvests. It may be expected that good results will follow this excursion. Mr. Lapointe, of St. Justine de Newton, has almost decided to establish saw and grist mills on the Loutre or on the Quinze. Mr. Goucher, formerly of Goucher & Telmosse, Montreal, will shortly found a branch of his establishment on the borders of Duhamel. Mr. Lamoureux, maker of agricultural implements, will have a factory in the north very soon. And W. Lacouture, who has bought the properties formerly occupied by a French colony, has also a number of projects in view, which he does not just now propose to publish.

A good deal of land has been sold in this region that is not being worked. This fact will form a subject of discussion at the next meeting of the society which will probably ask the Government to annul the deeds of those who have bought land with no intention of improving it."

THE ACTIVITY OF RAILROAD TRAFFIC.

Traffic on the western roads is reported as being the heaviest summer movement of freight, particularly of grain, that has ever been known. Earnings, too, begin to exhibit the effects of this condition of affairs. The gross receipts for July of some of the prominent roads in that part of the country show, according to Bradstreets, a very appreciable improvement. The figures of the Chicago, Rock Island & Pacific Railway Co. are a case in point. The increase in the road's gross earnings for July was only $120,000, but the significant part of it was, the earlier part of the month had actually brought a decrease in the road's performance, and the entire gain was therefore made in the two final weeks, or from the time the grain movement began to assume its present proportions. Other instances may be cited of a similar nature, and as the harvest progresses the different sections of the west contribute their quota to the volume of business that presses upon the railroads and threatens to swamp their facilities. The demand for cars is brisk, and all the roads have employment for every car they possess. At the same time the railroad shops have been generally filled with a full force, and in the case of some roads are working overtime on repairs to rolling stock and motive power. It is also a subject of complaint that in many cases the impounding and retention of cars from other lines is very generally practiced, though the fear that a car famine or actual scarcity of equipment will occur is not entertained in railroad circles. The managers point out that they are well provided to meet such an emergency as is presented by the size of this year's crops and the rapidity of their movement, the number of cars in service on most of the roads having been materially increased in the past few days. Indeed some of the authorities claim that the principal source of trouble will not be any scarcity of cars, but will be found in the insufficiency of terminal and unloading facilities at the points of destination. This, it is held, will be a very pronounced feature of the traffic situation should the present outlook for an enormous business be verified.—*R.R. and Eng. Review*, 14th August.

MINING PARAGRAPHS.

A special from Sherbrooke says that gold prospectors have struck a new "Klondike" about five miles from that town at Indian Harbor Lake, and great excitement prevails. The discovery is pronounced to be by far the finest in the country, and there is a great rush to secure areas.

Research shows that in the early days of placer mining in California the Legislature passed a law taxing every alien $20 a month for permission to dig in the mines. Some people think this affords the Canadians all the American precedents needed in the Klondike business.

The Trail smelter produced on August 13 the first brick of refined gold produced in Canada. It weighed 250 ounces, and is worth over $5,500. It is the culmination of a long series of experiments conducted at Mr. Heinz's smelter, and is significant as it implies that hereafter the Trail smelter's product will be refined gold and copper both ready for the world's markets, and neither requiring further treatment at the hands of American or English smelters or refiners.

The Victoria *Colonist* mentions the following facts: "In 1880 John McKenzie, a Canadian, with a party of Canadians, went down the Lewis River to Lake Lebarge. He was the first white man to run the White Horse Rapids. He may be said to have discovered the route into the Yukon valley. The first discoverer of gold and mineral on Stewart River was a man named Fraser, from Nova Scotia. Franklin gulch and Forty Mile Creek diggings were discovered by three Canadians named McCue, Stewart and Franklin. Davis Creek was discovered by a party consisting of one Canadian and four Americans. Miller and Glacier Creeks were discovered by a party consisting of Canadians and Americans. Birch Creek was discovered by a party consisting of three Canadians and two Americans. Klondike was discovered by a Canadian named Henderson."

AMERICA'S "GREAT MEN."

There are nearly six million members of fraternal organizations in the United States and Canada, according to the *New York Press*. Almost half of the voting population of our country can be found interested personally in one lodge or another. And then a list is given of the titles which are so dear to the hearts of some people. Men strive all their lives to become sublime princes of the royal secret, general grand high priests, grand masters, most puissant grand commanders, imperial potentates, grand sires, most worthy patriarchs, supreme chancellors, supreme regents, supreme chiefs, supreme spiritual directors, high chief rangers, supreme councillors, supreme arches, grand exalted rulers, supreme chief rangers, premiers, supreme archons, supreme protectors, supreme mystic rulers, high chief rulers, royal chiefs, national councillors, imperial councillors, head consuls, sharks of the universe, great incohonees and scrivenoters.

CUSTOMS INSTRUCTIONS.

An Ottawa despatch of 14th instant announces that a circular has been issued by the Department of Customs to collectors, instructing them to admit goods the produce of France, Algiers and the French colonies under the preferential clause of the tariff. This is the immediate result of the decision of the law officers of the Crown that Germany and Belgium are entitled to preferential treatment, as a clause in the French treaty, negotiated 1894, stipulates that France and her colonies should participate in any "advantages" granted "by Canada" to "any third power." The power" means any power beyond the two (Great Britain and France) who were signatories to the treaty. The Government has now admitted that four "powers," Great Britain, Germany, Belgium, and France, with their colonies and dependencies, and one self-governing colony (New South Wales), are entitled to 12½ per cent. reduction of the tariff rates at present, and 25 per cent. after 1st July, 1898. This number must, of necessity, be added to as other nations having treaties with Great Britain which contain the "most favored nation" clause make claim for preferential treatment, so that in a short time every nation under the sun, except the United States, will be entitled to a reduction of duty. As has been already pointed out in this correspondence, this will mean a loss of several millions of dollars of revenue, and a correspondingly large deficit at the close of the fiscal year, as the expenditure of the Government continues to increase.

Instructions were issued from the Customs Department to-day to collectors to note that importations to be entitled to the benefit of the preferential rate must be direct from the country of origin. This, however is not enforced literally. Where goods are imported through a foreign country where they have been entered for immediate transportation, they are considered to have been imported direct from the country of origin. This has been the policy of the department, and is unchanged, though there is strong temptation at the present time to induce an alteration. The concession is an important one to such American ports as New York and Portland. It is possible that the Government, if hostile interpretations are insisted upon by the United States, may, at an early date, consider an alteration of policy. This would call for an amendment of the Customs Act, which interprets the term country of origin. At the present time the American transportation companies are enjoying the full benefit of whatever stimulus may be given to the import trade by the preferential rates. But if that is withdrawn by a strict interpretation of the Canadian law such as the eastern interests are likely to favor, Canadian trade will be largely driven from American ports.

SOME QUEER INDUSTRIES.

The *St. Louis Republic* has compiled from the latest census the following odd ways of making a living:

"Occupations open to the thrifty individuals of both sexes have greatly increased during the last two decades, or even since the taking of the last decennial census, in 1890.

"The extraordinary progress of science during the time specified and the application of its principle to the practical problems of human life have not only had the effect of greatly increasing the capacity for production in the trades already firmly established, but have opened hundreds of queer side alleys which lead direct to the avenues of trade.

"There are, of course, dozens of these new and remarkable occupations with which science does not deal even in the remotest sense. In this class we find the rat catcher, the skunk farmer, the man who makes his living by picking up lost things in depots, theatres, hotels, etc., and returning them to their owners with the expectation of being rewarded; the clock winder, the man who collects orange and lemon peels, and the Lake Michigan syndicate, which is now engaged in raising black cats for their fur. They are not raising these cats on water, as might be inferred from the title, but have leased an island in the great lake, which is now plentifully stocked with both sexes of screeching felines.

"There are still others in the non-scientific category of queer occupations, but it will only be necessary to mention a few. One is a "rattle-snake farmer," who lives in the Ozark Mountains, and makes the products of his "farm" bring money from three different directions. The oil he disposes of to druggists, who have regular customers that believe it to be a panacea for a hundred different ills; the skin he sells to would-be cowboys, who use them as hat bands, and the skeletons are always a ready sale, the purchasers being the curators of the natural history departments of the different colleges and society museums. The man who wakes people up in the morning, the old cork collectors, and the dog catchers are well-known characters in every large city.

"The individuals who gain a livelihood in pursuits that are strictly scientific are equally as numerous as those who follow the more humble callings. In the list of occupations that are strictly scientific is the manufacture of artificial eggs, artificial coffee, and false diamonds. Also the industry of making buttons, combs, penholders and other articles of a similar nature from blood collected at the slaughter-houses. The man who makes billiard balls, buttons and rings from potatoes, which have been treated to a solution of nitric and sulphuric acids, is also the proprietor of an "industry" wherein the fundamental principles are strictly scientific. But the queerest of all is carried on by two young Pennsylvanians, who are making a regular business of extracting poison from honey bees. According to the accounts, they have two different ways of collecting their crop of vemon. In the first the beees are caught and held with their abdomens in small glass tubes until the poison sacs have been emptied. In the second, they are placed in a bottle on wire netting and enraged until the tiny drops of vemon fall into the alcohol which fills the lower third of the bottle. This vemon is said to be a sovereign remedy for cancer, rheumatism, snake bite, and a hundred others of the more terrible ills of humanity."

BUYERS' EXCURSIONS, NEW YORK AND BOSTON.

New Yorkers are in high spirits over the increased business to be done in that city by traders brought to Gotham by "Buyers'" excursions. A New York paper says: "Thirty to fifty millions of dollars, it is estimated by members of the Advisory Committee of the Merchants' Association, will be spent in this city by the out-of-town merchants who have been brought to this city by means of the low-rate excursions arranged by the railways at the instance of the city's merchants. John C. Juhring, of Francis H. Leggett & Co., estimates the total purchases at $20,000,000 to $30,000,000; George L. Putnam, of Sweetzer, Pembroke & Co., estimates that the buyers will leave here something like $30,000,000 to $35,000,000, and Mr. Sweetzer puts the estimate at $40,000,000 to $50,000,000. All of these estimates are on practically new business, or business that has been, for the most part, attracted to this market by the work of the Merchants' Association. It will be that much added to the usual fall trade. All the estimates take into consideration, also, the prospect that the trade of this fall, outside of this extra business, will exceed that of any other autumn since 1892.

"An examination of the register kept by the Merchants' Association shows that a large proportion, say 50 to 60 per cent., of the visitors is composed of dry goods merchants and clothing and millinery dealers. The remaining 50 or 40 per cent. is made up of dealers in notions, fancy goods, drugs, general merchandise, groceries, etc. The clothing men are usually the first to buy their fall stock. This accounts for the large percentage of them on the first excursions. The grocers, booksellers, druggists, hardware dealers, etc., will come later.

"The local merchants who have made careful estimates of the amount of purchases made up to this time in different lines of business, say that probably $1,500,000 to $2,000,000 has been spent by the out-of-town purchasers of dry goods, clothing and millinery. Many of the visitors have purchased very liberally, and ordered both autumn and winter stocks. One merchant, it is said, ordered a bill of $30,000, and another a bill amounting to $20,000.

"Very large sales have also been made in cloaks, jewellery, drugs, stationery, and waggons. In the smaller lines of trade it is almost impossible to arrive at estimates that are of any value. It is thought, however, that probably $500,000 has been spent in various lines outside of those mentioned, and that on farm implements, wagons, etc., and on drugs, jewellery and stationery about $500,000 more has been laid out in fall and winter stocks.

"The excursions will continue from the South and West this week, and the association expects to have even more buyers in the city than were here last week. More railways are offering low rates and are thus opening up new territory for the local market.

"Boston, August 16.—Merchants residing over 100 miles from Boston will have an excursion fare to this city from September 1 to 14, equal for the round trip to one and one-third of one full fare, except from points on the New York, New Haven & Hartford Railroad, and the New England Railroad.

"This is the result of recent negotiations between the Boston Trades and Transportation Association and the railroads. The association was formed with a view to arranging a cheap trip to Boston in the fall for the up-country merchants, so as to bring them into an acquaintance with the wholesale dealers of this city. Considerable enlargements of Boston's trade is expected from the enterprise."

—Mr. Robert C. Dunn, the State auditor of Minnesota, while in Duluth, recently stated that he was receiving many enquiries for State pine land, especially from the Duluth district. At the annual sale at St. Paul, in October, he expects that about 26,000,000 feet will be offered. Last year no pine was sold by the State, there not having been demand enough to warrant it. Mr. Dunn is convinced by his own observations that a great revival in the lumber business is about to be experienced in Minnesota. Enquiries for stumpage are brisker than for several years.

THE CROPS.

The upland hay crop along the shore between Shediac and Cape Bauld, is very light this season, says the Moncton, N.B., *Times*. At the lower end of the county, however, the hay crop is slightly better, although the upland yield is a little on the light side, while the marshes are good, bringing the crop up to the average or better. The grain crops in Westmorland and Botsford parishes are much later than usual, but give promise of being good. There will be lots of straw, at all events. The prospect for a large yield in roots is also bright. Potatoes are reported to be an immense crop in some sections.

—India rubber as a paving for streets was tried on a bridge in Hanover, Germany, a little more than a year ago, and proved so satisfactory that experiments are being made in Berlin and Hamburg with it for ordinary roadways. It is said to be perfectly noiseless, unaffected by heat or cold, and less slippery and more durable than asphalt.

—An attempt is being made in the United States to cultivate the ginseng plant. Gathering ginseng in its natural state is a source of profit to many inhabitants of Northern Ontario.

Commercial.

TORONTO MARKETS.

Toronto, 19th Aug., 1897.

Dairy Products.—There has been a liberal supply of dairy this week, but the quality has been so poor that it has been impossible to make much profit in the trade. The deterioration has been due to heated condition and the too frequent practice of long holding on the part of country merchants. Good dairy is worth 11½ to 12½c., and is in fair demand, but the poorer grades are neglected at 8 to 9c. Creamery is in active movement for export at former quotations. Special brands of pound prints have been sold at 19c. per lb. In sympathy with the increased prices of country markets there is a strong feeling in the local cheese market. The receipts of eggs are larger and the quality is improved. Prices are firm, No. 1 stock selling at 11 to 11½c.; No. 2, 8 to 9c. per doz.

Dry Goods.—Business, so far as immediate orders are concerned, is rather quiet. The houses are active in the shipment of goods ordered some weeks ago for the autumn trade. House visitors are few, but numbers will, no doubt, increase during millinery week, for which the merchants are making active preparations. Values remain unchanged.

Fish.—As there is a strong demand from the United States for fish, the catch in Canadian water is, to a greater extent than usual, being marketed there. As a result, supplies in the local market are rather small and prices comparatively firm.

Grain.—There has been considerable activity in the grain markets this week. Wheat has been subject to considerable fluctuations in value in both British and American markets. Crop reports are favorable to an abundant harvest in Canada, although considerable damage has been done in some districts by unfavorable weather. New Ontario wheat has been sold at 78c in the West. Rye is firmer at 42c. Oats are steady and in good demand. Peas remain firm, with sales at 44c. per bushel.

The stocks in store at Port Arthur on August 7th were 865,841 bushels, and there were received 251,673 bushels, and shipped 260,397 bushels, leaving in store on Aug. 14th, 857,118 bushels.

Green Fruit.—The cool weather has had some effect in limiting the volume of trade, but the movement still remains fairly good. Canadian peaches are coming in freely and are of good quality. Canadian plums are also in better supply and meet with a good demand.

Hides and Skins.—The local hide market remains unchanged. Dealers are paying 8½c. per lb. for No. 1 hides, while cured have been sold at 8¾c., and in some cases, as low as 8⅝c. or 8¾c. per lb. The small margin in values is due to local competition to secure the take-off of butchers. Hides have recently advanced in Western markets, as the following report dated August 16th, from Chicago indicates: "There is a firm and advancing market. At the higher prices, however, there was no activity to the demand, as the advance in costs had a tendency to make tanners hesitate. The close was quoted firm at 10¾ to 11c. for native steers; 10¾ to 11c. for Texas; 10 to 10¼ for butt brands; 9½ for branded cows; 9¼ to 9½ for Colorados; 10c. for heavy native cows, and 10½c. for light ditto." The Western States markets are almost within reach of Canadian tanners in spite of a 15 per cent. duty. If it were not for the absurd competition on the part of local merchants to secure green hides, it is probable that shipments would have already been made West.

Provisions.—A very active demand still continues. Stocks in the hands of Canadian packers are light. In a number of lines, viz., long clear, bacon, and mess pork, the stocks are so low that importations are being made from the United States. The lighter cuts of meat are also in short supply, as breakfast bacon and rolls; but as yet, we have not heard of importations. There is a marked difference between the prices of light and heavy hogs, and owing to this discrimination few heavy hogs are coming forward. Canadian hogs are bringing a much better price than is being paid for hogs in the United States.

Wool.—There is little activity in wool circles. A few lots of fleece wool are coming forward, for which dealers are paying 20c. per lb. The Canadian factories are not more than usually busy, and have pretty well supplied present wants from the growers. A London, England, advice, Aug. 14th, says: "The wool market during the week was quiet. There were a few inquiries, but little business resulted.

IN order to meet the growing demands of our business we have removed to new and enlarged premises at 92 BAY STREET.

This building has been fitted throughout for the special requirements of our business, and we are in better condition than ever to give the highest quality of work, and a prompt and efficient service.

The Toronto Engraving Co., Phone 2893.

92 Bay St.

Merinos are getting scarce, and reports from manufacturing districts show a hardening tendency in the price for fine-haired produce. The arrivals to date for the fifth series of sales are as follows: New South Wales, 7,835; Queensland, 12,114; Victoria, 19,320; South Australia, 2,026; West Australia, 395; Tasmania, 888; New Zealand, 42,293, and Cape of Good Hope and Natal, 23,595. Total, 108,466 bales, including 32,500 sent direct.

MONTREAL MARKETS.

MONTREAL, 18th Aug., 1897.

ASHES.—A dull market continues to be reported, and we learn of nothing in the way of noteworthy transactions. Values are unchanged at $3 to 3.10 for best quality pots, seconds $2.80 to 2.85, and about $4.30 for pearls

CEMENTS AND FIREBRICKS.—A somewhat quiet week is reported in so far as any large sales are concerned, but a fair jobbing business is passing. No change whatever has transpired in prices. We quote $2 to 2.10 for British; Belgian, $1.90 to 1.95; bricks, $15 to 21.00 as to brand.

DAIRY PRODUCTS.—Shipments of cheese for last week were very fair, one steamer alone took 30,397 boxes to Bristol. and 13 other vessels took out 48,300 boxes to Liverpool, London, Glasgow and Belfast. The shipments for same week last year were 70,204 boxes. The cable quotations advanced sixpence yesterday, the figure now standing 41s. 6d. The local market is very steady at 8¾ to 8⅞c. for fine Ontario; and Quebec, 8½c. Butter shipments were 4,679 packages. The market rules steady about on the basis of 17 to 17¼c. for fine creamery. Eggs are stronger at 10½ to 11c. per doz. for selected stock.

GROCERIES.—For sugars refiners still report good demand and a firming market, quotations being put up a shade at factory, and now standing at 4 1-16 to 4⅛c. for standard granulated as to quantity; the grade of granulated branded "German refined" is quoted at 3¾c., and yellows 3⅜ to 3⅝c. Outside markets are reported stronger, with some scarcity of raw cane sugars. No special demand is reported for teas on spot, but advices have been received of an active market in Japan, with considerable purchases on American account, and the advance noted last week is fully held. The Foochow market is reported distinctly firmer, though some falling off in quality is noted. Pingsuey greens are stated to be 20 per cent. dearer than last year. General interest is now being directed to the dried fruit markets. The first direct Mediterranean fruit steamer, the "Alvona," is scheduled to sail from Denia *via* Patras (an unusual proceeding) for Montreal, on or about the 31st inst. The "Bellona" will follow about a fortnight later, also calling at other principal ports; a third steamer will be put on if necessary. About 2,500 boxes of new Valencia raisins have come to hand by the Allan steamer "Parisian," *via* Liverpool, fully three weeks earlier than usual. The laid down cost is calculated at about 5½c. for fine off-stalk. First shipments of new currants are just about being made from Patras *via* Liverpool, and will probably cost about 4¾c. for fine Provincials. There are prospects of prices firming up. Of Sultanas, the crop will be smaller than last year. Some orders for Bosnian prunes, for October shipment, have been booked at following figures: 85's to 80's, 27s. 6d.; 90's to 100's, 25s., and 110's, 23s. 6d.

HIDES.—The local market exhibits no change, dealers buying beef hides on the basis of 8c. per lb. for No. 1, calfskins 8 and 6c., lambskins 35c. each. Receipts last week were good for the season, and are being fairly absorbed. American advices show that dealers are getting the full advance in duty on dry hides, and slaughter hides are up half a cent.

LEATHER.—The "Swamp" remains remarkably quiet for the season. A little business is reported in glove, splits and pebble, and some fair sales of fancy leathers, but no activity can be noted. Some Western tanners report that late returns from England give them a half-penny better on medium splits. We quote:—Spanish sole B.A. No. 1, 22 to 23c.; do. No. 2, 21c. to 22c.; No. 1 ordinary Spanish, 21c.; No. 2, 19 to 20c.; No. 1 slaughter, 23 to 25c.; No. 2 do., 19 to 22c.; common, 19 to 20c.; waxed upper light and medium, 30 to 35c.; do. heavy, 27 to 30c.; grained, 30 to 35c; Scotch grained, 30 to 35c.; western splits, 21 to 24c; Quebec do., 16 to 17c.; juniors, 15 to 17c.; calf-splits, 30 to 35c.; calf skins (35 to 40 lbs.), 60 to 65c.; imitation French calf skins, 65 to 75c; colored calf, American, 25 to 28c.; Canadian, 20 to 22c.; colored pebble cow, 13 to 15c.; russet sheepskin linings, 30 to 40c.; colored, 6 to 7½c.; harness, 24 to 27c.; buffed cow, 12 to 14c.; extra heavy buff, 15c.; pebbled cow, 12 to 13c.: polished buff, 11 to 13c.; glove grain, 12 to 13c.; rough, 22 to 23c.; russet and bridle, 35 to 45c.

METALS AND HARDWARE.—No special sign of business activity is noticeable at the moment, but there is an evident anticipation of business improvement shortly. A sale of 2 0 tons of Hamilton iron, for Ottawa, is reported at quotations, and a few small lots of Summerlee at $17.50. Scotch warrants rule pretty steady at 44s. 10d There have been no arrivals of Terne plates yet, and local stocks are much depleted. Canada plates continue a little scarce, and are pretty firm at quotations in a general way, though we hear of a sale of a 200 box lot of 52 sheets at $2.07½, and 800 boxes of 60's at $2.15 to 2.20. Lead, tin, copper, etc., are unchanged. We quote:—Summerlee pig iron, $17 00 to $17.50 ex-ship; Carron, No. 1, $17; No. 3, $16 25; Ayrsome, No. 1, $16.50; No 3, $16; Shotts, $17.25 to 17.50; Carnbroe, $16.00, ex-store; Siemens pig No. 1, $00.00; Ferrona, No. 1, $00.00; Hamilton No. 1, $16.00; No. 2, ditto, $15.25; machinery scrap, $15.00; common do., $12.00 to 13 00; bar iron, Canadian, $1.30 to 1.35; British, $2.00 to 2.15; best refined, $2.40; Low Moor, $5; Canada plates—Pontypool, or equal, $2.15; 52 sheets to box; 60 sheets, $2.25; 75 sheets, $2.35; all polished Canadas $2.40; Terne roofing plate, 20x28, $6 00; Black sheet iron, No. 28, $2.25; No. 26, $2.15; No. 24, $2.05; Nos. 17, $2; No. 16 and heavier, $2.15; tin plates—Bradley charcoal, $5.60 to 5.70; charcoal, I. C., Alloway, $3.15 to 3.25; do, I.X., $3.90 to 4.00; P. D. Crown, I C, $3 60 to 3.75; do., I.X., $4.50; Coke I.C., $2 90 to 3.00; coke, wasters, $2 70; galvanized sheets, No. 28, ordinary brands, $4; No. 26, $3.75; No. 24, $3 50 in case lots; Morewood, $5.00 to 5.10; tinned sheets, coke, No. 24, 5½c.; No. 26, tc.; the usual extra for large sizes. Canadian bands, per 100 lbs., $1.75; English ditto, $2; hoops and bands, $1.80 to 2.00. Steel boiler plate, ¼-inch and upwards, $1.85 to 1.90 for Dalzell, and equal; ditto three-sixteenths inch, $2.50; tank iron, ¼ inch, $1 50; three-sixeenths do.; $2.00; tank steel, $1.75; heads, seven-sixteenths and upwards, $2 45 to 2.50; Russian sheet iron, 9c.; lead, per 100 lbs., pig, $3 35 to 3.50; sheet, $4 to 4.25; shot, $6 to 6.50; best cast-steel, 8 to 10c.; toe calk, $2.25; spring, $2 50; sleigh shoe, $1.85; tire, $1 90; round machinery steel $2 25; ingot tin, 16 to 16½c. for L. & F.; Straits, 15¼ to 15½c.; bar tin, 16½ to 17c; ingot copper, 11½ to 12½c.; sheet zinc, $5 to $5.25; Silesian spelter, $4.65 to 4.75; Veille Montagne spelter, $4 75 to 5 00; American spelter, $4.60 to 4.75; antimony, 8½ to 9c.
